Discrimination and Privacy in the Information Society Bart Custers, Toon Calders, Bart Schermer, Tal Zarsky, 2012-08-11 Vast amounts of data are nowadays collected stored and processed in an effort to assist in making a variety of administrative and governmental decisions. These innovative steps considerably improve the speed effectiveness and quality of decisions Analyses are increasingly performed by data mining and profiling technologies that statistically and automatically determine patterns and trends However when such practices lead to unwanted or unjustified selections they may result in unacceptable forms of discrimination Processing vast amounts of data may lead to situations in which data controllers know many of the characteristics behaviors and whereabouts of people In some cases analysts might know more about individuals than these individuals know about themselves Judging people by their digital identities sheds a different light on our views of privacy and data protection This book discusses discrimination and privacy issues related to data mining and profiling practices It provides technological and regulatory solutions to problems which arise in these innovative contexts. The book explains that common measures for mitigating privacy and discrimination such as access controls and anonymity fail to properly resolve privacy and discrimination concerns Therefore new solutions focusing on technology design transparency and accountability are called for and set forth Rough Sets and Intelligent Systems - Professor Zdzisław Pawlak in Memoriam Andrzej Skowron, Zbigniew Suraj, 2012-08-14 This book is dedicated to the memory of Professor Zdzis law Pawlak who passed away almost six year ago He is the founder of the Polish school of Artificial Intelligence and one of the pioneers in Computer Engineering and Computer Science with worldwide influence He was a truly great scientist researcher teacher and a human being This book prepared in two volumes contains more than 50 chapters This demonstrates that the scientific approaches discovered by of Professor Zdzis I aw Pawlak especially the rough set approach as a tool for dealing with imperfect knowledge are vivid and intensively explored by many researchers in many places throughout the world The submitted papers prove that interest in rough set research is growing and is possible to see many new excellent results both on theoretical foundations and applications of rough sets alone or in combination with other approaches We are proud to offer the readers this book Data Warehousing and Knowledge Discovery A Min Tjoa, 2005-09-09 For more than a decade data warehousing and knowledge discovery technologies have been developing into key technologies for decision making processes in com nies Since 1999 due to the relevant role of these technologies in academia and ind try the Data Warehousing and Knowledge Discovery DaWaK conference series have become an international forum where both practitioners and researchers share their findings publish their relevant results and dispute in depth research issues and experiences on data warehousing and knowledge discovery systems and applications The 7th International Conference on Data Warehousing and Knowledge Discovery DaWaK 2005 continued series of successful conferences dedicated to these topics In this edition the conference tried to provide the right logical balance between data warehousing and knowledge

discovery Regarding data warehousing papers cover different relevant and still unsolved research problems such as the modelling of ETL processes and integration problems designing OLAP technologies from XML do ments modelling data warehouses and data mining applications together improments in guery processing partitioning and implementations With regard to data mining a variety of papers were presented on subjects including data mining te niques clustering classification text documents and classification and patterns These proceedings contain the technical papers that were selected for presentation at the conference We received 196 abstracts and finally received 162 papers from 38 countries and the Program Committee eventually selected 51 papers making an acceptance rate of 31 4 % of submitted papers **Recognition And Big Data** Sankar Kumar Pal, Amita Pal, 2016-12-15 Containing twenty six contributions by experts from all over the world this book presents both research and review material describing the evolution and recent developments of various pattern recognition methodologies ranging from statistical linguistic fuzzy set theoretic neural evolutionary computing and rough set theoretic to hybrid soft computing with significant real life applications Pattern Recognition and Big Data provides state of the art classical and modern approaches to pattern recognition and mining with extensive real life applications The book describes efficient soft and robust machine learning algorithms and granular computing techniques for data mining and knowledge discovery and the issues associated with handling Big Data Application domains considered include bioinformatics cognitive machines or machine mind developments biometrics computer vision the e nose remote sensing and social network analysis Web Technologies and Applications Atsuyuki Morishima, Rong Zhang, Wenjie Zhang, Lijun Chang, Tom Z. J Fu, Kuien Liu, Xiaoyan Yang, Jia Zhu, Zhiwei Zhang, 2016-10-04 This book constitutes the refereed proceedings of three workshops held at the 18th Asia Pacific Web Conference APWeb 2016 in Suzhou China in September 2016 the Second International Workshop on Web Data Mining and Applications WDMA 2016 the First International Workshop on Graph Analytics and Query Processing GAP 2016 and the First International Workshop on Spatial temporal Data Management and Analytics SDMA 2016 The 27 full papers included in this book were carefully reviewed and selected from 37 submissions. The goal of these workshops is to promote the new research directions and applications especially on web data graph data and spatial temporal data management and analytics **Knowledge Discovery in Multiple** Databases Shichao Zhang, Chengqi Zhang, Xindong Wu, 2012-12-06 Many organizations have an urgent need of mining their multiple databases inherently distributed in branches distributed data In particular as the Web is rapidly becoming an information flood individuals and organizations can take into account low cost information and knowledge on the Internet when making decisions How to efficiently identify quality knowledge from different data sources has become a significant challenge This challenge has attracted a great many researchers including the au thors who have developed a local pattern analysis a new strategy for dis covering some kinds of potentially useful patterns that cannot be mined in traditional multi database mining techniques Local pattern analysis deliv ers high performance pattern discovery from multiple databases

There has been considerable progress made on multi database mining in such areas as hierarchical meta learning collective mining database classification and pe culiarity discovery While these techniques continue to be future topics of interest concerning multi database mining this book focuses on these inter esting issues under the framework of local pattern analysis The book is intended for researchers and students in data mining dis tributed data analysis machine learning and anyone else who is interested in multi database mining It is also appropriate for use as a text supplement for broader courses that might also involve knowledge discovery in databases and data mining Siglink Newsletter, 1992 Science Techniques and Applications Hassan A. Karimi, Bobak Karimi, 2017-10-24 Data science has recently gained much attention for a number of reasons and among them is Big Data Scientists from almost all disciplines including physics chemistry biology sociology among others and engineers from all fields including civil environmental chemical mechanical among others are faced with challenges posed by data volume variety and velocity or Big Data This book is designed to highlight the unique characteristics of geospatial data demonstrate the need to different approaches and techniques for obtaining new knowledge from raw geospatial data and present select state of the art geospatial data science techniques and how they are applied to various geoscience problems Challenges and Algorithms for Knowledge Discovery from Data Matthijs van Leeuwen, Jilles Vreeken, 2025-09-22 Arno Siebes graduated in Mathematics from Utrecht University in 1983 He joined CWI in Amsterdam in 1985 and obtained his Ph D in 1990 from Twente University In 2000 he joined Utrecht University where he took up the chair for Large Distributed Databases which was later renamed to Algorithmic Data Analysis He supervised 15 Ph D students some of whom themselves became professors His key research work has been on data mining and inductive databases His most impactful contribution is using the minimum description length MDL principle for pattern mining the algorithm known as Krimp led to an important subdomain in data mining Arno has been a key member of the European data mining and machine learning community In addition to his work on the Intelligent Data Analysis symposia he was program co chair of the first co located edition of the European Conference on Machine Learning ECML and European Conference on Principles and Practice of Knowledge Discovery in Databases PKDD and played a key role in the development of this thriving event Throughout his research and teaching career Arno has maintained the philosophy that theory should work in practice The contributions in this Festschrift serve as a reminder of his successes as a researcher and mentor The chapters are categorized into topical sections on pattern mining learning and reasoning and large language models Data & Knowledge Engineering ,1995 Quantitative Structure-Activity Relationships (QSAR) for Pesticide Regulatory Purposes, 2011-10-13 Quantitative Structure Activity Relationship QSAR for Pesticide Regulatory Purposes stems from the experience of the EC funded project DEMETRA This project combined institutes involved in the regulatory process of pesticides industries of the sector and scientists to develop and offer original software for the prediction of ecotoxicity of pesticides Then to be used within the dossier preparation for pesticide registration. The basis of this book is more than three

years of research activities discussions studies and successful models This experience represents a useful example not only for the case of pesticides but also for the prediction of ecotoxicity and toxicity in general QSAR is used to link a given property of a chemical compound with some features related to its structure The theoretical toxicological chemical and information technology aspects will be treated considering the regulatory issues Innovative hybrid systems will be described for the toxicity prediction of pesticides and related compounds directly useful for pesticide evaluation within the Dossier preparation for pesticide registration Five endpoints will also be discussed addressing issues as standardisation verification validation accessibility reproducibility The driving force for Quantitative Structure Activity Relationship QSAR for Pesticide Regulatory Purposes is that all the issues of concern for end users are analysed discussed and solutions proposed further An innovative feature is that in order to offer powerful QSAR models the book discusses and reports on integrated QSAR models combined into a unique hybrid system Assesses the needs of regulators for pesticide approval and how these needs affect QSAR models Combines theoretical discussion with practical examples including five worked examples of hybrid systems Refers to original software available through the internet Foundations for the Web of Information and Services Dieter Fensel, 2011-06-21 In the mid 1990s Tim Berners Lee had the idea of developing the World Wide Web into a Semantic Web a web of information that could be interpreted by machines in order to allow the automatic exploitation of data which until then had to be done by humans manually One of the first people to research topics related to the Semantic Web was Professor Rudi Studer From the beginning Rudi drove projects like ONTOBROKER and On to Knowledge which later resulted in W3C standards such as RDF and OWL By the late 1990s Rudi had established a research group at the University of Karlsruhe which later became the nucleus and breeding ground for Semantic Web research and many of today s well known research groups were either founded by his disciples or benefited from close cooperation with this think tank In this book published in celebration of Rudi s 60th birthday many of his colleagues look back on the main research results achieved during the last 20 years Under the editorship of Dieter Fensel once one of Rudi s early PhD students an impressive list of contributors and contributions has been collected covering areas like Knowledge Management Ontology Engineering Service Management and Semantic Search Overall this book provides an excellent overview of the state of the art in Semantic Web research by combining historical roots with the latest results which may finally make the dream of a Web of knowledge ESRC Data Archive Bulletin ,1995 software and services come true Landmarks in the History of Corporate Citizenship Malcolm McIntosh, 2024-11-01 This is not a definitive history of corporate citizenship but for anyone interested in the who what why and how of this subject there are some very significant papers which may become definitive for scholars and reflective practitioners Just as many people cannot imagine a world without mobile telephony and the Internet and seem not to care or wonder how we got here so too it is forgotten that much that is now taken for granted in terms of corporate reporting and accountability has been and still is the result of a hard struggle **Resource Management for Big Data**

Platforms Florin Pop, Joanna Kołodziej, Beniamino Di Martino, 2016-10-27 Serving as a flagship driver towards advance research in the area of Big Data platforms and applications this book provides a platform for the dissemination of advanced topics of theory research efforts and analysis and implementation oriented on methods techniques and performance evaluation In 23 chapters several important formulations of the architecture design optimization techniques advanced analytics methods biological medical and social media applications are presented These chapters discuss the research of members from the ICT COST Action IC1406 High Performance Modelling and Simulation for Big Data Applications cHiPSet This volume is ideal as a reference for students researchers and industry practitioners working in or interested in joining interdisciplinary works in the areas of intelligent decision systems using emergent distributed computing paradigms It will also allow newcomers to grasp the key concerns and their potential solutions **Text Mining and its Applications** Spiros Sirmakessis, 2012-12-06 The world of text mining is simultaneously a minefield and a gold mine It is an exciting application field and an area of scientific research that is currently under rapid development It uses techniques from well established scientific fields e g data mining machine learning information retrieval natural language processing case based reasoning statistics and knowledge management in an effort to help people gain insight understand and interpret large quantities of usually semi structured and unstructured data Despite the advances made during the last few years many issues remain umesolved Proper co ordination activities dissemination of current trends and standardisation of the procedures have been identified as key needs There are many questions still unanswered especially to the potential users what is the scope of Text Mining who uses it and for what purpose what constitutes the leading trends in the field of Text Mining especially in relation to IT and whether there still remain areas to be covered **Sensors and Actuators in Smart Cities** Mohammad Hammoudeh, Mounir Arioua, 2018-05-04 This book is a printed edition of the Special Issue Sensors and Actuators in Smart Cities that was published in JSAN Data Mining and Knowledge Discovery Approaches Based on Rule Induction Techniques Evangelos Triantaphyllou, Giovanni Felici, 2006-09-10 2 Some Background Information 49 3 Definitions and Terminology 52 4 The One Clause at a Time OCAT Approach 54 4 1 Data Binarization 54 4 2 The One Clause at a Time OCAT Concept 58 4 3 A Branch and Bound Approach for Inferring Clauses 59 4 4 Inference of the Clauses for the Illustrative Example 62 4 5 A Polynomial Time Heuristic for Inferring Clauses 65 5 A Guided Learning Approach 70 6 The Rejectability Graph of Two Collections of Examples 72 6 1 The Definition of the Rejectability Graph 72 6 2 Properties of the Rejectability Graph 74 6 3 On the Minimum Clique Cover of the Rej ectability Graph 76 7 Problem Decomposition 77 7 1 Connected Components 77 7 2 Clique Cover 78 8 An Example of Using the Rejectability Graph 79 9 Conclusions 82 References 83 Author's Biographical Statement 87 Chapter 3 AN INCREMENTAL LEARNING ALGORITHM FOR INFERRING LOGICAL RULES FROM EXAMPLES IN THE FRAMEWORK OF THE COMMON REASONING PROCESS by X Naidenova 89 1 Introduction 90 2 A Model of Rule Based Logical Inference 96 2 1 Rules Acquired from Experts or Rules of the First Type 97
