The Encyclopedia of Housing, Second Edition Andrew T. Carswell, 2012-05-31 Since publication of the groundbreaking Encyclopedia of Housing in 1998 many issues have assumed special prominence within this field and indeed within the global economy For instance the global economic meltdown was spurred in large part by the worst subprime mortgage crisis we've seen in our history On a more positive note the sustainability movement and green development has picked up considerable steam and given the priorities and initiatives of the current U S administration this will only grow in importance and increased attention has been given in recent years to the topic of indoor air quality Within the past decade as well the Baby Boom Generation began its march into retirement and senior citizenship which will have increasingly broad implications for retirement communities and housing assisted living facilities aging in place livable communities universal design and the like Finally within the last twelve years an emerging generation of young scholars has been making significant contributions to the field For all these reasons and more we are pleased to present a significantly

Urban Ecological Design Danilo Palazzo, Frederick R. Steiner, 2012-06-22 This trailblazing book outlines an interdisciplinary process model for urban design that has been developed and tested over time Its goal is not to explain how to design a specific city precinct or public space but to describe useful steps to approach the transformation of urban spaces Urban Ecological Design illustrates the different stages in which the process is organized using theories techniques images and case studies In essence it presents a how to method to transform the urban landscape that is thoroughly informed by theory and practice The authors note that urban design is viewed as an interface between different disciplines They describe the field as peacefully overrun invaded and occupied by city planners architects engineers and landscape architects with developers and politicians frequently joining in They suggest that environmental concerns demand the consideration of ecology and sustainability issues in urban design It is after all the urban designer who helps to orchestrate human relationships with other living organisms in the built environment The overall objective of the book is to reinforce the role of the urban designer as an honest broker and promoter of design processes and as an active agent of social creativity in the production of the public realm

The Geometry of Urban Layouts Mahbub Rashid, 2016-06-16 This book presents a compendium of the urban layout maps of 2 mile square downtown areas of more than one hundred cities in developed and developing countries all drawn at the same scale using high resolution satellite images of Google Maps The book also presents analytic studies using metric geometrical topological or network and fractal measures of these maps These analytic studies identify ordinaries extremes similarities and differences in these maps investigate the scaling properties of these maps and develop precise descriptive categories types and indicators for multidimensional comparative studies of these maps The findings of these studies indicate that many geometric relations of the urban layouts of downtown areas follow regular patterns that despite social economic and cultural differences among cities the geometric measures of downtown areas in cities of developed and developing countries do not show significant differences and that the geometric possibilities of urban layouts are vastly greater than those that have been realized so far in our cities
