Taxonomic Biochemistry And Serology:

Taxonomic Biochemistry and Serology Charles A. Leone, 1964 *Taxonomic Biochemistry and Serology*
Leone, 1964-05-01 *Taxonomic biochemistry and serology : International Conference on Taxonomic Biochemistry, Physiology, and Serology, University of Kansas, September, 1962* Charles A., Hrsg.] Leone, 1964 **International Review of General and Experimental Zoology** William J. L. Felts, Richard J. Harrison, 2013-10-22 International Review of General and Experimental Zoology Volume 2 is a collection of world literature concerning developments in general and experimental zoology. This book is composed of six chapters and begins with a survey of the biochemical and serological techniques and their application in experimental taxonomy. The succeeding chapters review the field of general and comparative endocrinology in lower vertebrates as well as the problems of understanding the fine structure of the synaptic cleft of presumed chemically transmitting synapses. These topics are followed by discussions on structural and functional aspects of the avian lungs and air sacs, the metabolic aspect of heat transfer in biological systems, and the external energy transfer from the organism to the surrounding environment. The final chapter focuses on the experimental studies of neurocranium morphology and growth. This book will prove useful to zoologists and taxonomists. *Plant Taxonomy* Tod F. Stuessy, 2009-01-01 The field of plant taxonomy has transformed rapidly over the past fifteen years, especially with regard to improvements in cladistic analysis and the use of new molecular data. The second edition of this popular resource reflects these far-reaching and dramatic developments with more than 3 000 new references and many new figures. Synthesizing current research and trends, *Plant Taxonomy* now provides the most up-to-date overview in relation to monographic biodiversity and evolutionary studies and continues to be an essential resource for students and scholars. This text is divided into two parts. Part 1 explains the principles of taxonomy, including the importance of systematics, characters, concepts of categories, and different approaches to biological classification. Part 2 outlines the different types of data used in plant taxonomic studies, with suggestions on their efficacy and modes of presentation and evaluation. This section also lists the equipment and financial resources required for gathering each type of data. References throughout the book illuminate the historical development of taxonomic terminology and philosophy, while citations offer further study. *Plant Taxonomy* is also a personal story of what it means to be a practicing taxonomist and to view these activities within a meaningful conceptual framework. Tod F. Stuessy recalls the progression of his own work and shares his belief that the most creative taxonomy is done by those who have a strong conceptual grasp of their own research. **The Chemistry of Natural Products** Sam Stuart, 2013-10-22 *The Chemistry of Natural Products 4* covers the proceedings of the Fourth International Symposium on the Chemistry of Natural Products. This book is composed of fourteen chapters and begins with a discussion on the impact of natural product chemistry on medicine and the general methods for the construction of complex molecules. Considerable chapters are devoted to the biosynthesis, physico-chemical properties, reactions, and applications of some natural products.

including polysaccharides hormones ginkgolides indole and alkaloids The remaining chapters highlight the field of chemotaxonomy This book will prove useful to botanists chemists taxonomists and students *Bibliography of Agriculture*, 1965

Advances in Comparative Physiology and Biochemistry V5 O Lowenstein, 2012-12-02 Advances in Comparative Physiology and Biochemistry Volume 5 presents three papers that cover the different physiological and chemical aspects of biology from functional morphology at one end to behavior at the other end of the spectrum As always this serial publication emphasizes comparison be it within a group of related organisms or related substances or mechanisms throughout the animal kingdom The first study on the feeding and digestion in the Bivalvia examines both the feeding mechanisms and digestive processes within this class of mollusks solidly based on functional morphology and biochemistry The second study on isoenzymes multiple enzymes and phylogeny traces the evolutionary relationships between and within groups of important enzyme systems taking evidence from representatives of the whole animal kingdom The final paper on the comparative physiology of reproduction in arthropods examines the reproductive mechanisms in a whole phylum It considers patterns of sexuality germ cell formation physiology mating behavior and the nervous and hormonal factors governing reproduction Handbook of Biochemistry Gerald D Fasman, 2019-08-08 The section of this handbook has been dividing into two volumes the first volume contains information relating to purines pyrimidine and nucleoside oligonucleotide polynucleotides and their derivatives Both ribo and deoxyribo compounds are listed also The second volume will contain the remaining material similar to Volume 1 and material more relative to genetic and biological aspects such as enzymes involved in nucleic acid function protein synthesis linkage maps **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), 1965

Collecting Experiments Bruno J. Strasser, 2019-06-07 Databases have revolutionized nearly every aspect of our lives Information of all sorts is being collected on a massive scale from Google to Facebook and well beyond But as the amount of information in databases explodes we are forced to reassess our ideas about what knowledge is how it is produced to whom it belongs and who can be credited for producing it Every scientist working today draws on databases to produce scientific knowledge Databases have become more common than microscopes voltmeters and test tubes and the increasing amount of data has led to major changes in research practices and profound reflections on the proper professional roles of data producers collectors curators and analysts *Collecting Experiments* traces the development and use of data collections especially in the experimental life sciences from the early twentieth century to the present It shows that the current revolution is best understood as the coming together of two older ways of knowing collecting and experimenting the museum and the laboratory Ultimately Bruno J Strasser argues that by serving as knowledge repositories as well as indispensable tools for producing new knowledge these databases function as digital museums for the twenty first century *Perspectives*

in Zoology Alan Boyden, 2013-10-22 *Perspectives in Zoology* tries to discuss in a critical way some of the aspects of biology that lack perspective. The book also calls into attention the possibilities of obtaining a more correct view and challenges views that already have already been accepted by the scientific community. In this thought provoking book many questions are raised and different viewpoints and their implications are considered in the areas of natural history. Coverage includes the great ages of evolution, the primitive evolution in the eumatozoa, the morphological comparisons between homology and analogy, systematic serology and its principles and the relationship of systematics, evolution and phylogeny. The text is recommended for students and professors that deal with biology, zoology, genetics and evolution who not only wish to explore and understand other approaches to popular theories in zoology but also wish to be more familiarized and delve deeper with the common yet frequently discussed and debated topics in the field. **Chemical plant Taxonomy** T Swain, 2012-12-02

Chemical Plant Taxonomy focuses on the classification of plants based on their chemical composition. Composed of contributions of authors, the text first considers the methods of plant taxonomy. Folk taxonomy, Linnaean and post Linnaean taxonomy, Darwin and Evolutionary Taxonomy and the development of taxonomic practice are considered. The book continues with discussions on the theoretical and practical aspects of the species concepts and an outline of the history of chemical taxonomy. The selection also looks at the qualities of chemotaxonomy, the usefulness of chemistry in plant taxonomy, biosynthetic pathways and the factors affecting the production of secondary plant products. The text discusses the distribution of alkanes. The isolation and characterization of alkanes, taxonomic applications of alkanes, biogenesis of alkanes and fossil alkanes are discussed. The selection highlights the chemical taxonomy of acetylenic compounds, the distribution of fatty acids in plant lipids, distribution of aliphatic polyols, cyclitols, plant glycosides and alkaloids. The text is a good source of information for readers wanting to study the taxonomy of chemical plants. *Evolutionary Biology* Max Hecht, 2012-12-06

Evolutionary Biology of which this is the nineteenth volume continues to offer its readers a wide range of original articles, reviews and commentaries on evolution in the broadest sense of that term. The topics of the reviews range from anthropology and behavior to molecular biology and systematics. In recent volumes a broad spectrum of articles have appeared on such subjects as natural selection among replicating molecules, in vitro mate recognition and the reproductive behavior in *Drosophila*, evolution of the monocotyledons, species selection and the communication network made possible among even distantly related genera of bacteria by plasmids and other transposable elements. Articles such as these often too long for standard journals are the stuff of *Evolutionary Biology*. The editors continue to solicit manuscripts on an international scale in an effort to see that everyone of the many facets of biological evolution is covered. Manuscripts should be sent to anyone of the following: Max K Hecht, Department of Biology, Queens College of the City University of New York, Flushing, New York 11367; Bruce Wallace, Department of Biology, Virginia Polytechnic Institute and State University, Blacksburg, Virginia 24061; Ghillian T Prance, New York Botanical Garden, Bronx, New York 10458. Washburn, 2017-07-28 The names given to the variety of man like fossils known to scientists should reflect no more than scientific views of the nature of human evolution However often in the past these names have also reflected confusion regarding the basic principles of scientific nomenclature and the matter has been further complicated by the many new finds of recent decades It is the unique purpose of this book to clarify the present state of knowledge regarding the main lines of human evolution by expressing what is known and what is surmised about them in appropriate taxonomic language The papers in this volume were prepared by the world s leading authorities on the subject and were revised in the light of discussions at a remarkable conference held in Austria in 1962 under the auspices of the Wenner Gren Foundation The authors review first the meaning of taxonomic statements as such and then consider the substance of our present knowledge regarding the number and characteristics of species among living and extinct primates including man and his ancestors They also examine the relationship of behavior changes and selection pressures in evolutionary sequences Ample illustrations bibliographies and an index enhance the permanent reference value of the book which will undoubtedly prove to be among the fundamental paleoanthropological works of our time **National Library of Medicine Catalog** National Library of Medicine (U.S.), 1960 NIH Library Booklist , 1965 Advances in Comparative Physiology and Biochemistry V3 O Lowenstein, 2012-12-02 Advances in Comparative Physiology and Biochemistry Volume 3 focuses on phylogenetic and taxonomic value of enzyme variation between species synthesis of proteins in the formation of specialized cells and how organisms metabolize compounds The selection first offers information on variation in enzyme structure and function and molecular aspects of cytodifferentiation Discussions focus on molecular basis of enzyme evolution genetic basis of evolution technical difficulties in the comparative study of enzymes and enzyme evolution and phylogeny The text then takes a look at the comparative metabolism of xenobiotics including oxidations reductions dechlorinations and dehydrochlorinations bromination formation of peptides acetylation and evolutionary and taxonomic aspects of detoxication The manuscript examines the biochemistry of supporting materials in organisms and crustacean metabolism Topics include survey of natural supporting materials properties of supporting materials and their consequences carbohydrate and lipid metabolism terminal oxidation and energy production and enzymes pigments and biochemical adaptation to environment The selection is a valuable reference for readers interested in the developments in the processes methodologies and approaches in comparative physiology and biochemistry
