*Taxus Hideji* Itokawa, Kuo-Hsiung Lee, 2003-02-13 Taxol originally derived from the North American Yew tree in 1971 is well known worldwide as a powerful anticancer agent Mechanistically it has a unique microtubule stabilizing activity and was clinically developed as a therapeutic agent in the treatment of breast and ovarian cancers at the National Cancer Institute Washington D C USA I      **A Study of the Genus Taxus** Ray Albert Keen, 1947      *The Status of the Genus Taxus in*

*Kentucky* Robert Reed Pace, 2015 This study involved a detailed study of the genus *Taxus* in Kentucky A thorough examination was conducted including a review of the literature examination of field and herbarium specimens from both native and non native species microscopic analysis of leaf ultrastructure chemical analysis of taxane content and the construction of GIS models to predict the occurrence of the native species In the review and examination of morphological features it was found that the best features for separation of the taxa were plant height the number of the rows of stomata per abaxial leaf band and the location of papillose cells on the leaf epidermis In particular the SEM studies showed that stomatal bands are a reliable way of differentiating native and non native *Taxus* species within Kentucky A key to the taxa was prepared as well as descriptions of the species The chemical analysis failed to uncover any reliable differences between taxa utilizing only five taxanes GIS models were prepared for 13 counties in eastern Kentucky and these predicted the most likely occurrence of *Taxus canadensis* in each portion of the county This study documented three species of *Taxus* that occur in Kentucky *T. baccata* *T. canadensis* and *T. cuspidata* *Taxus canadensis* is the only native species considered to be a glacial relict and is currently listed as a state threatened species The other two species occur only rarely in nature as escapes from cultivation likely from the spread of seeds by birds There is no evidence of hybridization between native and non native species It was concluded that microhabitat requirements for *T. canadensis* are very restrictive and that ongoing climate change may impact Kentucky's native population of *T. canadensis*      **Studies in Natural Products Chemistry** Atta-ur

Rahman, 1998-12-03 Natural Products Chemistry continues to grow at an increasing pace and this growth is reflected in the present volume of *Studies in Natural Products Chemistry* which is the 20th of this series The first 20 volumes were largely devoted to structure and synthesis of various classes of natural products irrespective of their bioactivity Subsequent volumes of this series will however be devoted to the chemistry of bioactive natural products and will therefore a departure from the earlier volumes The present volume contains contributions from a number of eminent scientists and covers interesting reviews on terpenes alkaloids and other types of natural products reported from terrestrial and marine sources

Comprehensive indexes covering all the 20 volumes have been prepared which include a Cumulative General Subject Index along with more focused Cumulative Indices on Organic Synthesis Pharmacological Activity and Biological Source This comprehensive indexing of the volumes should make the entire series much more valuable and user friendly      **A Study of**
