**Linear Energy Transfer Spectra and Dose Equivalents of Galactic Radiation Exposure in Space** Hermann J. Schaefer, 1966 In assessing the astronaut's exposure from galactic cosmic rays on space missions of long duration conversion of absorbed doses to dose equivalents is required Since a large part of the dose contribution from heavy primaries is produced at Linear Energy Transfer LET values beyond the range for which radiobiological data are available it seems preferable to analyze the LET distributions themselves and to compare them to standard x rays rather than to assume arbitrary values for the Relative Biological Effectiveness RBE The local LET distributions in tissue are found to be extremely skewed with a large maximum at the relativistic minimum LET Lined up on the LET scale they cover the very wide interval from 0.18 to 2790 keV micron T as compared to an interval from 0.4 to 35 keV

**Evolving Ourselves** Juan Enriquez, Steve Gullans, 2015-03-10 We are the primary drivers of change We will directly and indirectly determine what lives what dies where and when We are in a different phase of evolution the future of life is now in our hands Why are rates of conditions like autism asthma obesity and allergies exploding at an unprecedented pace Why are humans living longer getting smarter and having far fewer kids How might your lifestyle affect your unborn children and grandchildren How will gene editing technologies like CRISPR steer the course of human evolution If Darwin were alive today how would he explain this new world Could our progeny eventually become a different species or several In *Evolving Ourselves* futurist Juan Enriquez and scientist Steve Gullans conduct a sweeping tour of how humans are changing the course of evolution sometimes intentionally sometimes not For example Globally rates of obesity in humans nearly doubled

between 1980 and 2014 What's more there's evidence that other species from pasture fed horses to lab animals to house cats are also getting fatter As reported by U S government agencies the rate of autism rose by 131 percent from 2001 to 2010 an increase that cannot be attributed simply to increases in diagnosis rates Three hundred years ago almost no one with a serious nut allergy lived long enough to reproduce Today despite an environment in which food allergies have increased by 50 percent in just over a decade 17 million Americans who suffer from food allergies survive thrive and pass their genes and behaviors on to the next generation In the pre Twinkie era early humans had quite healthy mouths As we began cooking bathing and using antibiotics the bacteria in our bodies changed dramatically and became far less diverse Today the consequences are evident not only in our teeth but throughout our bodies and minds Though these harbingers of change are deeply unsettling the authors argue that we are also in an epoch of tremendous opportunity New advances in biotechnology help us mitigate the cruel forces of natural selection from saving prematurely born babies to gene therapies for sickle cell anemia and other conditions As technology like CRISPR enables us to take control of our genes we will be able to alter our own species and many others a good thing given that our eventual survival will require space travel and colonization enabled by a fundamental redesign of our bodies Future humans could become great caretakers of the planet as well as a more diverse more resilient gentler and more intelligent species but only if we make the right choices now Intelligent provocative and optimistic *Evolving Ourselves* is the ultimate guide to the next phase of life on Earth

and Clear!" Sunny Tsiao, 2008 From the Dust Jacket Regardless of how sophisticated it may be no spacecraft is of any value unless it can be tracked accurately to determine where it is and how it is performing At the height of the space race 6 000 men and women operated NASA s Spaceflight Tracking and Data Network at some two dozen locations across five continents This network known as the STDN began its operation by tracking Sputnik 1 the world s first artificial satellite that was launched into space by the former Soviet Union Over the next 40 years the network was destined to play a crucial role on every near Earth space mission that NASA flew Whether it was receiving the first television images from space tracking Apollo astronauts to the Moon and back or data acquiring for Earth science the STDN was that intricate network behind the scenes making the missions possible Some called it the Invisible Network a hallmark of which was that no NASA mission has ever been compromised due to a network failure Read You Loud and Clear is a historical account of the STDN starting with its formation in the late 1950s to what it is today in the first decade of the twenty first century It traces the roots of the tracking network from its beginnings at the White Sands Missile Range in New Mexico to the Tracking and Data Relay Satellite System TDRSS space based constellation of today The story spans the early days of satellite tracking using the Minitrack Network through the expansion of the Satellite Tracking And Data Acquisition Network STADAN and the Manned Space Flight Network MSFN and finally to the Space and Ground Networks of today Written from a nontechnical perspective the author has translated a highly technical subject into historical accounts told within the framework of the U S space program These accounts tell how international goodwill and foreign cooperation were crucial to the operation of the network and why the space agency chose to build the STDN the way it did More than anything else the story of NASA s STDN is about the unsung heroes of the space program
