McGiffen, 2005-03-20 Frankenfoods designer babies Dolly the Sheep and Raelian fantasists few subjects generate as much controversy and misinformation as biotechnology This book takes the reader behind the headlines to examine the new laws on genetic based technologies who s making them and why Steven P McGiffen offers a lucid analysis of the real implications of biotechnology legislation in the US and the EU and contrasts it with approaches to agricultural and medical biotech in the rest of the world He argues that the EU and America are removing decision making power from the people and their elected representatives Biotechnology regulation is a local manifestation of a global process of transferring power from the people to corporations from poor countries to rich ones from the public to the private He shows that biotechnology demands effective and democratic international decision making procedures and that we are very far from achieving them This is an indispensable guide for activists and anyone who wants to know more about how to control biotech regulation and how to resist handing control of our future to corporations **Teaching Biological Evolution in Higher Education** Brian

**Darwin-Inspired Learning** Carolyn J. Boulter, Michael J. Reiss, Dawn L. Sanders, 2015-01-19 Charles Darwin has been extensively analysed and written about as a scientist Victorian father and husband However this is the first book to present a carefully thought out pedagogical approach to learning that is centered on Darwin s life and scientific practice The ways in which Darwin developed his scientific ideas and their far reaching effects continue to challenge and provoke contemporary teachers and learners inspiring them to consider both how scientists work and how individual humans read nature Darwin inspired learning as proposed in this international collection of essays is an enquiry based pedagogy that takes the professional practice of Charles Darwin as its source Without seeking to idealise the man Darwin inspired learning places importance on

active learning hands on enquiry critical thinking creativity argumentation interdisciplinarity In an increasingly urbanised world first hand observations of living plants and animals are becoming rarer Indeed some commentators suggest that such encounters are under threat and children are living in a time of nature deficit Darwin inspired learning with its focus on close observation and hands on enquiry seeks to re engage children and young people with the living world through critical and creative thinking modeled on Darwin s life and science

**Handbook of Research on Applying Universal Design for Learning Across Disciplines: Concepts, Case Studies, and Practical Implementation** Fovet, Frederic, 2021-01-22

Universal design for learning UDL has been hailed for over a decade as a revolutionary lens that allows campuses to shift their efforts to create inclusive environments In recent years UDL has gone beyond the field of disability and been explored with regards to international and indigenous students There is now a sizable body of literature that details the benefits of implementing UDL in higher education as well as a number of emerging studies examining the strategic challenges of developing UDL across institutions There is however still a relative paucity of research discussing the transformation of instruction or assessment in concrete terms Therefore there is a necessity for research and information on UDL that has already been implemented in classrooms and the practical examples of what this process of transformation looks like The Handbook of Research on Applying Universal Design for Learning Across Disciplines Concepts Case Studies and Practical Implementation offers practical examples of UDL having successfully been embedded in courses within various disciplines and classroom formats as well as across the undergraduate and graduate sectors The chapters provide case studies and concrete examples of what the UDL reflection on practice might look like in specific faculties and departments While highlighting UDL in areas such as educational technology student engagement assignment design and inclusive education this book is ideally intended for inservice and preservice teachers administrators teacher educators higher education professors and leaders practitioners researchers academicians and students interested in the integration of UDL into strategic academic plans

*Adaptive Representations for Reinforcement Learning* Shimon Whiteson, 2010-07-10 This book presents new algorithms for reinforcement learning a form of machine learning in which an autonomous agent seeks a control policy for a sequential decision task Since current methods typically rely on manually designed solution representations agents that automatically adapt their own representations have the potential to dramatically improve performance This book introduces two novel approaches for automatically discovering high performing representations The first approach synthesizes temporal difference methods the traditional approach to reinforcement learning with evolutionary methods which can learn representations for a broad class of optimization problems This synthesis is accomplished by customizing evolutionary methods to the on line nature of reinforcement learning and using them to evolve representations for value function approximators The second approach automatically learns representations based on piecewise constant approximations of value functions It begins with coarse representations and gradually refines them during learning analyzing

the current policy and value function to deduce the best refinements This book also introduces a novel method for devising input representations This method addresses the feature selection problem by extending an algorithm that evolves the topology and weights of neural networks such that it evolves their inputs too In addition to introducing these new methods this book presents extensive empirical results in multiple domains demonstrating that these techniques can substantially improve performance over methods with manual representations
