Siting Hazardous Waste Treatment Facilities The Nimby Syndrome:

Siting Hazardous Waste Treatment Facilities Kent Portney, 1991-02-28 Since the 1960s and 70s a wave of environmental awareness has swept the United States News reports of oil spills DDT damage to wildlife and the nuclear near disaster at Three Mile Island have along with other incidents contributed to a widespread distrust of industry and a collective fear of all chemical processing facilities This fear has been translated according to Kent Portney into local political opposition to the siting of much needed hazardous waste treatment plants the NIMBY not in my backyard syndrome The failure of federal state and local governments to effectively control improper hazardous waste disposal has further strengthened the NIMBY syndrome Portney argues that once it is understood what motivates the array of local attitudes toward hazardous waste treatment facilities and the political constraints placed on the search for solutions effective compromises can be reached The book begins by focusing on the facility siting dilemma and what can be done to find new policies that work Chapter two analyzes what does and does not work in easing the effects of the NIMBY syndrome Democratic political processes are investigated in chapter three especially those that contribute to the development of NIMBY opposition Chapters four and five present empirical correlates of changes in peoples attitudes and explain how people can ultimately be convinced to support local hazardous waste treatment facilities Social cultural and psychological construction of opposition to facility siting is studied in chapter six Portney presents viable solutions to the facility siting problem in light of the NIMBY syndrome in the concluding chapter This important book will be of great value to practitioners facing actual siting decisions members of statewide siting boards private sector parties wishing to site facilities and those teaching courses in environmental policy or politics

Operations Research and Environmental Management Carlo Carraro, Alain Haurie, 2012-12-06 The activities of the Fondazione ENI Enrico Mattei cover a broad spectrum of research topics ranging from economics to engineering from environmental management at the industry or regional level to basic mathematical modelling research It is the combination of the activities on these last two topics that led the Fondazione to organise with the University of Geneva a workshop where operation research tools were designed with the aim to provide national and local policy makers with appropriate analytical and policy instruments for environmental management In the recent past attention has often been devoted to global environmental issues in which the level of policy making is either international through multi country agreements on emission control or national when environmental policies are designed to control domestic pollution Many environmental problems however have a local or regional dimension Even when their dimension is global e.g. in the case of the greenhouse gas effect relevant decisions on emission control such as the adoption of energy saving utilities are taken at the local level In many countries the current legislation imposes the local authorities to prepare plans and adopt measures to control energy consumption or to reduce waste of natural resources It is therefore important to analyze the way in which local or regional authorities optimise their environmental management

Inspiring Economics Bruno S. Frey, 2002-01-01 I highly recommend this book to all economists It is well written informative and a pleasure to read The first chapter in particular *Inspiring Dismal or Boring Economics* should be made required reading for all graduate students in economics and even more so for their professors especially at leading universities in the United States Yew Kwang Ng *Journal of Economic Literature* Instead of ignoring the challenge to rational behaviour posed by several anomalies in behaviour or abandoning rationality in the face of this challenge Bruno Frey's *Inspiring Economics* provides a valuable extension of rational behaviour to incorporate these anomalies This is an exhilarating study that I strongly recommend to everyone including those like myself who believe that the importance of these anomalies are sometimes exaggerated Gary S Becker Stanford University US Bruno Frey is one of a number of modern economists who believe as I do that economics should be importing rather than exporting ideas from elsewhere in the social sciences In these sparkling essays he shows that rational choice theory is enriched and sometimes revised by taking account of non monetary rewards and incentives With Frey economics once again becomes an inspiring behavioural science Mark Blaug University of London and University of Buckingham UK Economics can be inspiring often taking a stand against convention achieving challenging results discussing unorthodox viewpoints and suggesting new policies Bruno S Frey illustrates what he perceives to be the inspirational quality of economics and how this differs from the type of economics studied in many academic institutions He introduces insights into economics from a psychological perspective dealing with issues such as transformation of anomalies identification in democracy and crowding effects and focuses on intrinsic motivation and how it is undermined *Inspiring Economics* also looks at the integration of economics and politics covering topics including popular initiatives and referenda authoritarian nations and foreign aid and the way in which the cost of war is reflected on the capital market This groundbreaking empirical study of human motivation and behaviour will be a fascinating read for those interested in economics and economic theory

Environmental Injustice In The U.S. James Lester, 2018-02-23 Environmental

Injustice in the United States provides systematic insight into the social economic and political dynamics of environmental decision making and the impacts of those decisions on minority communities The first part of the book examines closely the history of the environmental justice movement and the scholarly literature to date with a discussion about how the issue made the public agenda in the first place The second part of the book is a unique quantitative analysis of the relationship among race class political mobilization and environmental harm at three levels state county and city Despite the initial skepticism of the authors their study finds both race and class to be significant variables in explaining patterns of environmental harm The third part of the book then offers policy recommendations to decisionmakers based on the book s findings It was named a Choice Outstanding Academic Book of 2001 **The Environment Dictionary** David
