Beyond Malthus Lester Russell Brown, Gary T. Gardner, Brian Halweil, 2000 On the bicentennial of Malthus legendary essay on the tendency of population to grow more rapidly than the food supply this book examines the impacts of population growth on 19 global resources and services including food fresh water fisheries jobs education income and health Despite current hype of a birth dearth in parts of Europe and Japan the fact remains that human numbers are projected to increase by over 3 billion by 2050 Populations in rapidly growing nations are in danger of outstripping the carrying capacity of their natural support systems and governments in such situations will find it increasingly hard to respond to crises such as AIDS food and water shortages and mass unemployment Beyond Malthus examines methods such as the expansion of international family planning investment in educating young people in the developing world and promotion of a shift towards smaller families which will represent the most humane response to the possible ravages of the population explosion *Ecocide* Franz Brosch, 2002-09-20 We live in an age of ecocide Changes of enormous ecological significance are occurring on our planet the ozone layer is beginning to disintegrate Since 1970 the world's forests have almost halved A quarter of the world's fish have been depleted 70% of biologists believe the world is now in the midst of the fastest mass extinction of species in the planet's 4.5 billion year history Biodiversity loss is rated as a more serious environmental problem than the depletion of the ozone layer global warming or pollution and contamination How have we come to this and what can be done to conserve our environment for the future Ecocide examines the facts behind the figures to offer a disturbing account of the ecological impact that the human species has on the planet It shows how we are wilfully destroying our world Highlighting important countermovements who are working for ecological democracy this unique book is essential for anyone who cares about conserving our environment for the future *The Environment in Anthropology* Nora Haenn, Richard Wilk, 2006 Presenting ecology and current environmental studies from an anthropological point of view this book gives readers a strong intellectual foundation as well as offering practical tools for solving environmental problems *Urban Ecology* Pedro Barbose, 2020-11-04 Today 55% of the world's human population lives in urban areas By 2030 up to 90% of the global human population will live in cities and the global population is expected to increase by 68% by 2050 Although land cover categorized as urban is a relatively small fraction of the total surface of the Earth urban areas are major driving forces in global environmental change habitat loss threats to biodiversity and the loss of terrestrial carbon stored in vegetation biomass These and many other factors highlight the need to understand the broad scale impacts of urban expansion as it affects the ecological interactions between humans wildlife and plant communities The book stresses the importance of understanding ecological forces and ecosystem services in urban areas and the integration of ecological concepts in urban planning and design The creation of urban green spaces is critical to the future of urban areas enhancing human social organization human health and quality of life **Encyclopedia of Soil Science** Rattan Lal, 2017-01-11 New and Improved

Fighting The Wrong Enemy Edward Graham, 2000-09-01 Antiglobalist forces have been gaining greater momentum in recent years in their efforts to reverse what they view as the negative effects of an integrating global economy Their influence was felt earlier when efforts to create a Multilateral Agreement on Investment MAI ended in failure in 1998 after France left the bargaining table at the Organization for Economic Cooperation and Development effectively killing the initiative In this book through an evaluation of the MAI itself and the issues raised by its opponents Edward M Graham takes a fresh look at the growing backlash against globalization He first explores whether the MAI negotiations failed due to political maneuvering by antiglobalist nongovernmental organizations supported by US organized labor or because of irreconcilable differences among the negotiating parties over the substance of the issue of foreign direct investment He then objectively and thoroughly assesses antiglobalist assertions that the activities of multinational firms have had negative effects on workers both in the home investor and host recipient nations with a special focus on developing nations An important finding is that multinational firms tend to pay workers in developing nations wages that are significantly above prevailing wages Graham then examines the issue of globalized economic activity and the environment finding that economic growth in developing nations can lead to increased environmental stress but also finding that foreign direct investment can lead to reductions in this stress He finds that the worry of many environmentalists of a race to the bottom is not borne out by the evidence The final chapters assess whether or not a negotiation to create a comprehensive agreement on investment should be included in a multilateral negotiating round at the World Trade Organization in the near future The interests of developing nations in this agenda are given special attention Graham indicates that while many developing nations would accept such rules it might nonetheless be

premature to press for a comprehensive agreement at this time Rather a limited investment agenda might be both more feasible and more productive **Psychology of Sustainable Development** Peter Schmuck, Wesley P. Schultz, 2012-12-06 Human activity overuses the resources of the planet at a rate that will severely compromise the ability of future generations to meet their needs Changes toward sustainability need to begin within the next few years or environmental deterioration will become irreversible Thus the need to develop a mindset of sustainable development the ability of society to meet its needs without permanently compromising the earth's resources is pressing The Psychology of Sustainable Development clarifies the meaning of the term and describes the conditions necessary for it to occur With contributions from an international team of policy shapers and makers the book will be an important reference for environmental developmental social and organizational psychologists in addition to other social scientists concerned with the impact current human activity will have on the prospects of future generations An Introduction to World Politics Richard Oliver Collin, Pamela L. Martin, 2012-08-02 This book written for introductory level students of global politics examines the connections and conflicts among peoples on our planet and relates them in a personalized way While other world politics texts examine the globe from a distance this text emphasizes the voices of **An Agenda for People** United Nations Fund for Population Activities, 2002-06 This volume examines the past achievements as well as the future challenges of the United Nations Population Fund UNFPA It aims to provide an assessment of the state of world population programmes and a look into the future of community development *Just Ecological Integrity* Peter Miller, Laura Westra, 2002 Table of contents
