**Justice, Equality and Tax Law** Nevja Čičin-Šain,Mario Riedl,2022-10-05 An in depth analysis of the specific aspects of justice equality and tax law Justice Equality and Tax Law is a topic that is both old and new at the same time Even if the society changes the demands that tax needs to be just and equal seem to be immutable What changes of course is the perception of the content of those demands International taxation post BEPS has been fraught with new challenges that warranted urgent responses These challenges were mainly provoked by the unprecedented rise of the digital economy which truly marked a change in the way business is conducted how value is created and how goods and services are produced and consumed Digitalization in turn had repercussions on all aspects of taxation direct taxation indirect taxation and even tax procedures For instance the quest for more justice and equality in profit taxes was the reason why in October 2021 a historical deal based on a two pillar solution to address the tax challenges arising from the digitalization of the economy was negotiated within the OECD G20 Inclusive Framework on Base Erosion and Profit Shifting and agreed upon by 137 member countries It was also the motive behind the shift from a typical vendor collection model to an intermediary collection model supported by centralized registration points in indirect taxes notably the VAT GST Abundant data from the European Union or the OECD signaled an ever increasing gap between expected VAT revenues and VAT actually collected making it obvious that the classical system of VAT GST collection was unable to respond to challenges posed by the digital economy Therefore new solutions based on the participation of digital platforms as intermediaries had been introduced Finally new technologies such as blockchain paved new avenues in enhancing tax compliance In this context this volume entitled Justice Equality and Tax Law contains not only

a selection of the best master's theses of the full-time LL.M programme in 2021/2022 but also represents an in-depth analysis of various aspects of this evergreen topic      Research Handbook on International Taxation Yariv Brauner, 2020-12-25

VAT Neutrality Charlene Adline Herbain, 2015-05-04 Most major economies use a value added tax VAT which is a derivation of the French 1954 *taxe sur la valeur ajoutée* The initial imposition of VAT in France and its spread around the world have been driven by economic reasons This book focuses on one of these economic triggers the neutrality of VAT as regards the functioning of the economy It demonstrates that the reason VAT was chosen in France and why thereafter it spread around the world was because it offered the possibility to collect governmental revenue while allowing the economic forces of the market to interplay without being adversely affected The prerequisite conditions for the existence of VAT neutrality are therefore identified herein along with an overview of the VAT mechanism demonstrating that the concept of neutrality is built into the VAT system in a manner that allows for the preservation of the natural functioning of the market After the definition of VAT neutrality is set forth the elements that comprise VAT neutrality are tested against the realities on the ground and the issues that infringe the neutrality of VAT are identified and analysed In conclusion remedies for these issues are being sought by a review of the causes of infringement of VAT neutrality in the perspective of selected proposals for modified VAT systems These proposals include redesignating the place where VAT is levied and improving VAT collection Ultimately the proposed solution has recourse to the roots of VAT together with the most advanced technological tools available to give back to VAT the power to levy revenue while letting the economic forces of the market interplay without instigating any adverse influence

**Complexity of Tax Simplification** Simon James,Adrian Sawyer,Tamer Budak,2016-04-29 Simplicity in taxation has considerable potential advantages However attempts to simplify tax systems are only likely to be successful and enduring if they take account of the reasons why taxation is complex There are strong pressures on tax systems to accommodate a range of important factors as well as complex and changing national and international environments within which modern tax systems have to operate This book explores the experiences of simplification in a range of countries and jurisdictions The

authors analyse a range of manifestations of simplification including tax systems tax law taxpayer communications and tax administration They also review the longer term or more fundamental approaches to simplification suggesting that in order to strike the optimum balance between simplicity and the aims of a tax system in terms of efficiency and equity a range of complex environmental factors must all be taken into account With chapters reflecting on experiences from Australia China Canada Malaysia New Zealand Russia South Africa Thailand Turkey the UK and the US the authors illustrate differences between jurisdictions and the changing environment in which they operate This book addresses the crucial balance between simplicity and the other objectives of tax design and reform and suggests that reformers of the tax system should include simplicity as one of the key evaluators of any design or reform proposal

Taxation of Investment Derivatives Antti Laukkanen, 2007 This dissertation aims to provide a comprehensive overview of the taxation of investment derivatives and the relationship between the derivatives and the accrual and realization methods Investment derivatives such as convertible bonds include an initial investment and a derivative an option to buy or sell or to participate in the value movements of some underlying property The principal focus of this study is on three universal tax issues namely valuation timing and the taxation of unrealized gains As a common principle interest income and capital gains are treated more similarly in corporate taxation than in individual taxation Moreover the taxation of financial instruments is currently in a turn around phase in several countries not least because of the implementation of the IFRS rules in accounting and the related fair value principle The obligation to use fair values in accounting apparently motivates tax legislators to strive to use the same principles in taxation as well The comparative method plays a major role in this study by examining the tax legislations and the tax practices of different countries An in depth analysis of the similarities and differences of tax laws and practices in the United States the United Kingdom Germany Finland and Sweden is provided This is of particular interest as the underlying components single and often specified financial derivatives are basically identical While this study does not deal with individual tax treaties or bilateral transactions the OECD Model is scrutinized in order to highlight the underlying principles of the given recommendations especially with respect to interest income and capital gains Due to the increasing importance of IFRS rules in accounting the study is not limited to tax law but also looks at issues from the perspective of finance accounting and economics
