Effects of Tax Incentives and Subsidies on Economic Growth in Developing Economies ERICK OKOTH,2023

Tax incentives are defined as tax rules that go against the generally accepted principles of tax neutrality and fairness which are aimed at fostering both foreign and local investment since they promote greater investment competitiveness among emerging nations maximize returns on investments and reduce costs and inefficiencies in the investment market Subsidies on the other hand are described as any government aid to private industry producers or consumers whether financial or in kind which requires no commensurate repayment to the government in exchange but prerequisite the benefit on a certain conduct

by the receiving firm or industry This study aims to investigate the potential effectiveness of tax incentives and subsidies in enhancing economic development and growth among developing economies Most developing economies if not all that are members of the UN organization work toward achieving the SDGs by 2030 and this is significantly influenced by the amount of investment they attract to boost economic growth and encourage improvements in citizen welfare This study uses secondary data from World Bank IMF and OECD reports for a target period of 2010-2022 to examine how tax incentives affect economic development in emerging economies with a focus on Indonesia Kenya Malaysia and Türkiye For this study the researcher used STATA version 15 to investigate the underlying relationship between the variables The researcher performed a panel data regression analysis using the generalized estimating equations approach The P value approach used by the researcher assesses the relevance of the study's variables for which the p value is set at 0.05 This is a comparative study as such the researcher prefers to use the generalized estimating equation method to perform a panel data regression analysis because it can simulate the population as a whole and because the data may be correlated which would violate the independence assumptions of other traditional regression procedures The study obtained positive and significant effects of subsidies on investments and economic growth Incentives on taxes on production sales and transfers and taxes on profits and capital gains registered a non-significant positive effect on investment however the effects were insignificant and negative for economic growth

Knowledge and Incentives in Policy Stefanie Haeffele, 2018-06-04 The relative effectiveness of various institutions such as the market or government is based on the ability for individuals to access and use dispersed knowledge in society and the incentives that steer their actions Market process theory emphasizes the effectiveness of the price system to consolidate and transmit knowledge in the marketplace Together this framework provides new insights on the capability of individuals to cooperate and improve society and the limits to government interventions in society The original research in each chapter uses this economic way of thinking to analyze a variety of public policy issues examining the incentives responsible for and the factors that contribute to the creation and effectiveness of the policies These chapters authored by public policy practitioners and researchers tackle such pressing issues as public education the process for approving medical devices tax policy and land use regulation

Mining Tax Incentives and Economic Growth J. Douglas (James Douglas) Gibson, 1969* *The Oxford Handbook of Urban Economics and Planning* Nancy Brooks, Kieran Donaghy, Gerrit-Jan Knaap, 2011-02-01 This volume embodies a problem-driven and theoretically informed approach to bridging frontier research in urban economics and urban regional planning The authors focus on the interface between these two subdisciplines that have historically had an uneasy relationship Although economists were among the early contributors to the literature on urban planning many economists have been dismissive of a discipline whose leading scholars frequently favor regulations over market institutions equity over efficiency and normative prescriptions over positive analysis Planners meanwhile even as they draw upon economic principles often view the work of economists as abstract not sensitive to

institutional contexts and communicated in a formal language spoken by few with decision making authority Not surprisingly papers in the leading economic journals rarely cite clearly pertinent papers in planning journals and vice versa Despite the historical divergence in perspectives and methods urban economics and urban planning share an intense interest in many topic areas the nature of cities the prosperity of urban economies the provision of urban services efficient systems of transportation and the proper allocation of land between urban and environmental uses In bridging this gap this book highlights the best scholarship in planning and economics that addresses the most pressing urban problems of our day and will stimulate further dialog between scholars in urban planning and urban economics

Tax Incentives for Increasing Savings and Investments United States. Congress. Senate. Committee on Finance,1990 *Investment Incentives* J. B. Bracewell-Milnes,2013-11-21 Modern society cannot function without a high level of investment just as it cannot function without a high level of taxation or its equivalent in communist countries Both investment and taxation as a source of government revenue are important for the level of production and employment No wonder then that governments are faced with an increasing dilemma between higher taxation on the one hand and the need for stimulating investment by tax reductions or allowances on the other Related to this is the choice between a market economy which is as free as possible and detailed governmental measures for monitoring and steering investments not only with the intention to promote economic growth but to further a number of other social interests as well This is to some extent a political issue but the decisions it involves should still be based on sound economic facts and considerations In many countries one of the important instruments for stimulating and steering investment is the introduction or modification of investment incentives within the framework of the tax system The present book gives a lot of information on this subject It endeavours to create a conceptual order in the somewhat chaotic multitude of incentives practised by the main industrial countries and studies their economic effects The authors are well equipped to do this because they were closely involved in the study on this subject made by Erasmus University Rotterdam at the request of the Common Market Commission
