Tax Reform and the Cost of Capital Dale Weldeau Jorgenson, Kun-Young Yun, 1991 The cost of capital was introduced almost thirty years ago and quickly became an indispensable tool for modelling the impact of tax policy on investment behavior Within the past decade the cost of capital has assumed a central role in tax reform debates through the closely related concept of the marginal effective tax rate This book provides a comprehensive treatment of the cost of capital approach to tax policy analysis Keeping the analytical level of this work has been kept to a minimum the authors introduce complexities in a step by step fashion leading up to a representation of tax systems for capital income that is suitable for tax policy analysis The success of the cost of capital approach is due in large part to its ability to assimilate a virtually unlimited amount of descriptive detail on alternative tax policies To provide guidance to students and tax policy professionals this book contains a full implementation of the approach for the United States including an analysis of the alternative proposals that culminated in the highly influential Tax Reform Act of 1986 in the United States It also describes opportunities for further research and gives a complete and up to date bibliography to the rapidly expanding literature This is the first in a series of Lectures in Monetary and Fiscal Policy at Uppsala University in honor of Erik Lindahl

Federal Income Tax Treatment of Capital Gains and Losses United States. Department of the Treasury. Tax Advisory Staff of the Secretary, 1951

The Taxation of Income from Capital, 1983 This working paper presents Chapter 2 of a book that has been submitted to the University of Chicago Press for publication consideration The point of the book is to compare taxes on income from capital in four countries accounting for corporate personal and property taxes and including national regional and local level taxes We describe statutory tax rates and other tax rules in each country and calculate overall effective marginal tax rates for different combinations of asset industry source of finance and ownership categories This chapter

defines the methodological problems of estimating effective tax rates on income from capital and it defines the limits of this analysis by pointing out areas that are excluded by this study. It sets out the parameters that need to be estimated for each country and describes other data requirements involving the amount of each capital asset located in each industry financed by each source and owned by each ownership category.

Taxation of Capital Gains Under the OECD Model

Convention Stefano Simontacchi, 2007-01-01 Increasing globalization and the related cross border flows of capital resources has only increased interest in the taxation of transnational capital gains among practitioners and scholars. This is particularly true as it relates to investments in immovable property. As a consequence, Article 13 of the OECD Model Convention covering capital gains has emerged as one of the document's key provisions. Based on in-depth historical research, this book pays particular attention to the definition of capital gains falling within the scope of Article 13. It also thoroughly analyses the treaty regime applicable to gains derived from the alienation of both immovable property and shares of immovable property companies.

Capital Gains Taxation Michael Littlewood, Craig Elliffe, 2017-08-25 Capital gains taxes pose a host of technical and political design problems and yet while the literature on the theory of capital gains taxation is substantial little has been published on how governments have addressed these dilemmas. Written by a team of distinguished international experts, *Capital Gains Taxation* addresses the gap in the literature; it explains how a number of countries tax capital gains and the successes and pitfalls of these methods.

The Effects of Taxation on Capital Accumulation Martin Feldstein, 2009-05-15 Research on capital formation has long been a major focus of studies sponsored by the National Bureau of Economic Research because of the crucial role of capital accumulation in the process of economic growth. The papers in this volume examine the influence of taxes on capital formation with specific focus on the determinants of saving and the process of investment in plant and equipment.

OECD Tax Policy Studies Taxation of SMEs in OECD and G20 Countries

Taxing Capital Income Henry J. Aaron, Leonard E. Burman, C. Eugene Steuerle, 2007-07-02 The question of whether to tax income from wealth has sparked debate since our country's inception. Does taxing capital income ensure the progressivity of our system or merely discourage saving? Would switching our tax code to one that taxes only consumption be more efficient or only burden middle and low income people? And if we were to radically reform the way America taxes its citizens, how could we ensure that vital revenue would not be lost? Some analysts would even argue that under our present byzantine tax system we don't really tax capital income at all. In this volume, eminent economists analyze the problems associated with taxing capital income and propose policy solutions which are then challenged by their peers in informed commentary. It may not settle the debate, but policymakers, scholars and the public will find a wealth of information and ideas to consider.
