Public Finance in Theory and Practice Second edition Holley Ulbrich, 2013-03-01 The events of the last decade have challenged the contemporary neo classical synthesis in all branches of economics but particularly public finance The most notable feature of the 2nd edition of Public Finance in Theory and Practice is the infusion of behavioral economics throughout the text with an end of chapter question inviting the student to apply a behavioral lens to some question or issue There continues to be an emphasis on the importance of the institutional context drawing on examples from many countries and emphasizing the role of lower level governments in a federal system The first five chapters establish this context by reviewing the role of government in a market system the description of government structure from an economic perspective the basic data about revenue and expenditures the elements of public choice and the distributional role of government The book has been substantially reorganized to put more emphasis on public expenditure Expanded treatment of public goods includes common property resources and congestible or club goods Expanded discussion of budgeting and cost benefit analysis provides some practical application of the theory Updated discussions of social security public education and health care address these three major contemporary public finance issues The traditional emphasis on revenue taxes fees and grants has been retained but follows rather than precedes the discussion of expenditures

Special Features of the UN Model Convention Anna Binder, Viktoria Wöhrer, 2019-10-01 Detailed research on the UN Model Convention s unique features The UN Model Convention has a significant influence on international tax treaty practice and is especially used by emerging and developing countries as a starting point for treaty negotiations Driven by the aim to achieve consistency in the international tax treaty practice the structure and content is to a large extent similar in the UN Model and the OECD Model However whereas the OECD has historically focused its efforts on issues mainly relevant for developed countries the UN Tax Committee has continuously attempted to specifically take into account tax treaty policies for developing countries when drafting and amending the UN Model Convention Compared to the OECD Model Convention the UN Model Convention aims at giving more weight to the source principle Popular examples are the PE definition in the UN Model which provides for a lower threshold than Article 5 of the OECD Model or Article 12A on Fees for Technical Services which has been introduced with the latest amendment of the UN Model Convention 2017 and allows for a withholding tax to be levied on payments to non residents when the payer of the fee is a resident of that contracting State irrespective of where the services are provided Interestingly in the discussions of the tax challenges arising from the digitalization of the economy the OECD and the G20

are also exploring options to allocate more taxing rights to the jurisdiction of the customer and or user i e the market jurisdictions As this has traditionally been the focus of the UN Model Convention its unique features and developing countries practices could be taken into account when exploring new nexus rules that are not constrained by the physical presence requirement This book contains the master s theses of the full time LL M program 2018 2019 for which Special Features of the UN Model Convention has been chosen as the general topic With this book the authors and editors do not aim at discussing each article of the UN Model Convention but rather focus on the unique features of the UN Model Convention which are explored in detail This is supplemented with an evaluation of the function and relevance of the UN Tax Committee in the international tax policy discussion and with an analysis of the influences of the OECD s BEPS project on the UN Model
