Taxes And Capital Formation:

Taxes and Capital Formation Martin Feldstein, 2007-12-01 Economists have long recognized the importance of capital accumulation for productivity and economic growth The National Bureau of Economic Research is currently engaged in a study of the relationship between such accumulation and taxation policies with particular focus on saving risk taking and corporate investment in the United States and abroad The papers presented in Taxes and Capital Formation are accessible nontechnical summaries of fourteen individual research projects within that study Complete technical reports on this research are published in a separate volume The Effects of Taxation on Capital Accumulation also edited by Martin Feldstein By addressing some of the most critical policy issues of the day with a minimum of economic jargon Taxes and Capital Formation makes the results of Bureau research available to a wide audience of policy officials and staff as well as to members of the business community The volume should also prove useful for courses in public policy business and law In keeping with Bureau tradition the papers do not contain policy recommendations instead they promote a better understanding of how the economy works and the effects of specific policies on particular aspects of the economy The Role of Federal Tax Policy in Stimulating Capital Formation and Economic Growth United States. Missing from recent discussions of tax reform is any systematic analysis of the effects of various tax proposals on skill formation. This gap in the literature in empirical public finance is due to the absence of any empirically based general equilibrium models with both human capital formation and physical capital formation that are consistent with observations on modern labor markets. This paper is a progress report on our ongoing research on formulating and estimating dynamic general equilibrium models with endogenous heterogeneous human capital accumulation. Our model explains many features of rising wage inequality in the U.S. economy. James Heckman, Lance Lochner, and Christopher Taber, 1998. In this paper, we use our model to study the impacts on skill formation of proposals to switch from progressive taxes to flat income and consumption taxes. For the sake of brevity, we focus on steady states in this paper, although we study both transitions and steady states in our research.
