Mathematical and Computational Tools for Electrical and Computer Engineers Using MATLAB Jamal T.

Manassah, 2017-12-19 Engineers around the world depend on MATLAB for its power usability and outstanding graphics capabilities. Yet too often engineering students are either left on their own to acquire the background they need to use MATLAB or they must learn the program concurrently within an advanced course. Both of these options delay students from solving realistic design problems especially when they do not have a text focused on applications relevant to their field and written at the appropriate level of mathematics. Ideal for use as a short course textbook and for self study, *Elementary Mathematical and Computational Tools for Electrical and Computer Engineers Using MATLAB* fills that gap. Accessible after just one semester of calculus, it introduces the many practical analytical and numerical tools that are essential to success both in future studies and in professional life. Sharply focused on the needs of the electrical and computer engineering communities, the text provides a wealth of relevant exercises and design problems. Changes in MATLAB's version 6.0 are included in a special addendum. The lack of skills in fundamental quantitative tools can seriously impede progress in one's engineering studies or career. By working through this text either in a lecture/lab environment or by themselves, readers will not only begin mastering MATLAB but they will also hone their analytical and computational skills to a level that will help them to enjoy and succeed in subsequent electrical and computer engineering pursuits. **Lines and Circles in Taxicab**

Geometry Guanghui Chen, 1992 **The Role of Mathematics Discourse in Producing Leaders of Discourse** Libby Knott, 2010-01-01 The intent of this monograph is to showcase successful implementation of mathematical discourse in the classroom. Some questions that might be addressed are: How does a teacher begin to learn about using discourse purposefully to improve mathematics teaching and learning? How is discourse interwoven into professional development content courses to provide teachers with the tools necessary to begin using discourse in their own classrooms? What does a discourse-rich classroom look like and how is it different from other classrooms from both the teacher's and the students' perspectives? How can teachers of pre-service teachers integrate discourse into their content and methods courses? How can we use discourse research to inform work with teachers both pre and in service for example to help them know how to respond to elicited knowledge from students in their classrooms? What are the discourse challenges in on-line mathematics courses offered for professional development? Can on-line classrooms also be discourse-rich? What would that look like? In what ways does mathematical discourse differ from discourse in general? **Similarity Measures for Face Recognition** Enrico Vezzetti

, Federica Marcolin, 2015-04-27 Face recognition has several applications including security such as authentication and identification of device users and criminal suspects and in medicine corrective surgery and diagnosis. Facial recognition programs rely on algorithms that can compare and compute the similarity between two sets of images. This eBook explains some of the similarity measures used in facial recognition systems in a single volume. Readers will learn about various measures including Minkowski distances, Mahalanobis distances, Hausdorff distances, cosine-based distances among other

methods The book also summarizes errors that may occur in face recognition methods Computer scientists facing face and looking to select and test different methods of computing similarities will benefit from this book The book is also useful tool for students undertaking computer vision courses

Thinking Geometrically Thomas Q. Sibley, 2015-08-14 Thinking Geometrically A Survey of Geometries is a well written and comprehensive survey of college geometry that would serve a wide variety of courses for both mathematics majors and mathematics education majors Great care and attention is spent on developing visual insights and geometric intuition while stressing the logical structure historical development and deep interconnectedness of the ideas Students with less mathematical preparation than upper division mathematics majors can successfully study the topics needed for the preparation of high school teachers There is a multitude of exercises and projects in those chapters developing all aspects of geometric thinking for these students as well as for more advanced students These chapters include Euclidean Geometry Axiomatic Systems and Models Analytic Geometry Transformational Geometry and Symmetry Topics in the other chapters including Non Euclidean Geometry Projective Geometry Finite Geometry Differential Geometry and Discrete Geometry provide a broader view of geometry The different chapters are as independent as possible while the text still manages to highlight the many connections between topics The text is self contained including appendices with the material in Euclid's first book and a high school axiomatic system as well as Hilbert's axioms Appendices give brief summaries of the parts of linear algebra and multivariable calculus needed for certain chapters While some chapters use the language of groups no prior experience with abstract algebra is presumed The text will support an approach emphasizing dynamical geometry software without being tied to any particular software

Nonlinear Differential Equations Raimond A. Struble, 2018-01-16 Detailed treatment covers existence and uniqueness of a solution of the initial value problem properties of solutions properties of linear systems stability of nonlinear systems and two dimensional systems 1962 edition

Computational Mind: A Complex Dynamics Perspective Vladimir G. Ivancevic, Tijana T. Ivancevic, 2007-06-12 This is a graduate level monographic textbook in the field of Computational Intelligence It presents a modern dynamical theory of the computational mind combining cognitive psychology artificial and computational intelligence and chaos theory with quantum consciousness and computation The book introduces to human and computational mind comparing and contrasting main themes of cognitive psychology artificial and computational intelligence

Selected Papers in Logic and Foundations, Didactics, Economics Karl Menger, 2012-12-06 This volume brings together those papers of mine which may be of interest not only to various specialists but also to philosophers Many of my writings in mathematics were motivated by epistemological considerations some papers originated in the critique of certain views that at one time dominated the discussions of the Vienna Circle others grew out of problems in teaching fundamental ideas of mathematics still others were

occasioned by personal relations with economists Hence a wide range of subjects will be discussed epistemology logic basic concepts of pure and applied mathematics philosophical ideas resulting from geometric studies mathematical didactics and finally economics The papers also span a period of more than fifty years What unifies the various parts of the book is the spirit of searching for the clarification of basic concepts and methods and of articulating hidden ideas and tacit procedures Part 1 includes papers published about 1930 which expound an idea that Carnap after a short period of opposition in the Circle fully adopted and under the name Principle of Tolerance he eloquently formulated it in great generality in his book *Logical Syntax of Language* 1934 through which it was widely disseminated The New Logic in Chapter 1 furthermore includes the first report 1932 to a larger public of Godel's epochal discovery presented among the great logic results of all time Chapter 2 is a translation of an often quoted 1930 paper presenting a detailed exposition and critique of intuitionism
