Taxonomic Atlas Of Living Primates:

Taxonomic Atlas of Living Primates Brunetto Chiarelli, 1972 **Primate Cytogenetics and Comparative Genomics** Luca Sineo, Roscoe Stanyon, 2006 This volume is a collection of contributions of a Florentine post congress symposium on Primate Cytogenetics and Comparative Genomics held on occasion of the XX International Primatological Congress Turin in 2004 Comparative Molecular Cytogenetics and Genomics are two rapidly expanding fields Researchers from Italy Germany Spain United States and Japan meet in Florence to discuss over a two day period recent advances and summarize the current state of the science Primate Functional Morphology and Evolution Russell H. Tuttle, 2011-06-15 No detailed description available for Primate Functional Morphology and Evolution **Primate Paradigms** Linda Marie Fedigan, 1992-06 This critical review of behavior patterns in nonhuman primates is an excellent study of the importance of female roles in different social groups and their significance in the evolution of human social life A book that properly illuminates in rich detail not only developmental and socioecological aspects of primate behavior but also how and why certain questions are asked In addition the book frequently focuses on insufficiently answered questions especially those concerned with the evolution of primate sex differences Fedigan's book is unique because it places primate adaptations and our explanation of those patterns in a larger intellectual framework that is easily and appropriately connected to many lines of research in different fields sociology psychology anthropology neurobiology endocrinology and biology and not in inconsequential ways either James McKenna *American Journal of Primatology* This is the feminist critique of theories of primate and human evolution John H Cook *Nature* *National Library of Medicine Current Catalog* National Library of Medicine (U.S.), 1971 First multi year cumulation covers six years 1965 70 *Behavioral Primatology* A. M. Schrier, 2013-11-26 First published in 1977 The volume of research on nonhuman primates has expanded tremendously during the past 20 years and researchers familiarity with them has increased correspondingly This series of volumes deals with scientific studies of the behavior of nonhuman primates apes monkeys and prosimians The behavior of these animals is of course of interest in its own right But then so is that of the many other orders of animals Behavior of nonhuman primates is of special interest because these animals are more closely related to human beings structurally physiologically and beyond doubt behaviorally than are any other living animals Current Catalog National Library of Medicine (U.S.), 1973 First multi year cumulation covers six years 1965 70 *Primates in Flooded Habitats* Katarzyna Nowak, Adrian A. Barnett, Ikki Matsuda, 2019-01-03 Nearly half the world's primate species use flooded habitats at one time or another from swamp going Congo gorillas and mangrove eating proboscis monkeys to uacaris in Amazonian riverside forests This first ever volume on the subject brings together experts from around the world in a ground breaking volume spanning fossil history current biology and future research and conservation priorities Flooded habitats are a vital part of tropical biology both for the diversity of the species they house and the complexity of their ecological interactions but are often completely overlooked

This book will set the stage for a new wave of research on primates in these extraordinarily productive and highly threatened areas and is ideal for researchers and graduate students in primatology zoology ecology and conservation Comparative Karyology of Primates Bruno Chiarelli, Ann L. Koen, Giuseppe Ardito, 2011-06-24 No detailed description available for Comparative Karyology of Primates *Perspectives in Primate Biology* A. Chiarelli, 2013-03-13 The present volume is the result of a NATO Advanced Study Institute held in Montaldo Turin Italy between the 7 and 19 June 1972 The aim of the Study Institute has been the development of a general philosophy for the science of Primatology Lecturers were selected from those scientists deeply involved and interested in this field The course intended to serve students and researchers using primates in medical and biological research but especially those interested in the natural history of the group and in human biology In the past the study of primates was largely limited to determine the origin of the human species Today however interest in them extends far beyond this narrow focus In terms of both practical human purposes and theoretical interests the study of primate biology and behaviour is of ever increasing importance Their close comparative relationships with man has proved of such great value to human biology and medicine that their numbers and kinds are quickly dwindling For this reason one of the main focuses of the A S I was on their reproductive biology and conservation During the meeting days a broad series of lectures on specific topics of comparative anatomy physiology endocrinology reproductive physiology genetics and molecular biology cytogenetics and behaviour were delivered by leading primatologists Guide to Sources for Agricultural and Biological Research J.
