Genetic Learning for Adaptive Image Segmentation Bir Bhanu, Sungkee Lee, 1994-09-30 Image segmentation is generally the first task in any automated image understanding application such as autonomous vehicle navigation object recognition photointerpretation etc All subsequent tasks such as feature extraction object detection and object recognition rely heavily on the quality of segmentation One of the fundamental weaknesses of current image segmentation algorithms is their inability to adapt the segmentation process as real world changes are reflected in the image Only after numerous modifications to an algorithm s control parameters can any current image segmentation technique be used to handle the diversity of images encountered in real world applications Genetic Learning for Adaptive Image Segmentation presents the first closed loop image segmentation system that incorporates genetic and other algorithms to adapt the segmentation process to changes in image characteristics caused by variable environmental conditions such as time of day time of year weather etc Image segmentation performance is evaluated using multiple measures of segmentation quality These quality measures include global characteristics of the entire image as well as local features of individual object regions in the image This adaptive image segmentation system provides continuous adaptation to normal environmental variations exhibits learning capabilities and provides robust performance when interacting with a dynamic environment This research is directed towards adapting the performance of a well known existing segmentation algorithm Phoenix across a wide variety of environmental conditions which cause changes in the image characteristics The book presents a large number of experimental results and compares performance with standard techniques used in computer vision for both consistency and quality of segmentation results These results demonstrate a the ability to adapt the segmentation performance in both indoor and outdoor color imagery and b that learning from experience can be used to improve the segmentation performance over time

Genetic Algorithms for Machine Learning John J. Grefenstette, 2012-12-06 The articles presented here were selected from preliminary versions presented at the International Conference on Genetic Algorithms in June 1991 as well as at a special Workshop on Genetic Algorithms for Machine Learning at the same Conference Genetic algorithms are general purpose search algorithms that use principles inspired by natural population genetics to evolve solutions to problems The basic idea is to maintain a population of knowledge structure that represent candidate solutions to the problem of interest The population evolves over time through a process of competition i e survival of the fittest and controlled variation i e recombination and mutation Genetic Algorithms for Machine Learning contains articles on three topics that have not been the focus of many previous articles on GAs namely concept learning from examples reinforcement learning for control and theoretical analysis of GAs It is hoped that this sample will serve to broaden the acquaintance of the general machine learning community with the major areas of work on GAs The articles in this book address a number of central issues in applying GAs to machine learning problems For example the choice of appropriate representation and the corresponding set of genetic learning operators is an important set of decisions facing a user of a genetic algorithm The study of genetic algorithms is proceeding at a robust pace If experimental progress and theoretical understanding continue to evolve as expected genetic algorithms will continue to provide a distinctive approach to machine learning Genetic Algorithms for Machine Learning is an edited volume of original research made up of invited contributions by leading researchers

Extending the Scalability of Linkage Learning Genetic Algorithms Ying-ping Chen, 2006 Genetic algorithms GAs are powerful search techniques based on principles of evolution and widely applied to solve problems in many disciplines However most GAs employed in practice nowadays are unable to learn genetic linkage and suffer from the linkage problem The linkage learning genetic algorithm LLGA was proposed to tackle the linkage problem with several specially designed mechanisms While the LLGA performs much better on badly scaled problems than simple GAs it does not work well on uniformly scaled problems as other competent GAs Therefore we need to understand why it is so and need to know how to design a better LLGA or whether there are certain limits of such a linkage learning process This book aims to gain better understanding of the LLGA in theory and to improve the LLGA s performance in practice It starts with a survey of the existing genetic linkage learning techniques and describes the steps and approaches taken to tackle the research topics including using promoters developing the convergence time model and adopting subchromosomes

Parallel Problem Solving from Nature - PPSN III Yuval Davidor, Hans-Paul Schwefel, Reinhard Männer, 1994-09-21 The challenges in ecosystem science encompass a broadening and strengthening of interdisciplinary ties the transfer of knowledge of the ecosystem across scales and the inclusion of anthropogenic impacts and human behavior into ecosystem landscape and regional models The volume addresses these points within the context of studies in major ecosystem types viewed as the building blocks of central European landscapes

The research is evaluated to increase the understanding of the processes in order to unite ecosystem science with resource management The comparison embraces coastal lowland forests associated wetlands and lakes agricultural land use and montane and alpine forests Techniques for upscaling focus on process modelling at stand and landscape scales and the use of remote sensing for landscape level model parameterization and testing The case studies demonstrate ways for ecosystem scientists managers and social scientists to cooperate

Classification and Learning Using Genetic Algorithms
