Operations Research and Environmental Management Carlo Carraro, Alain Haurie, 2012-12-06 The activities of the Fondazione ENI Enrico Mattei cover a broad spectrum of research topics ranging from economics to engineering from environmental management at the industry or regional level to basic mathematical modelling research It is the combination of the activities on these last two topics that led the Fondazione to organise with the University of Geneva a workshop where operation research tools were designed with the aim to provide national and local policy makers with appropriate analytical and policy instruments for environmental management In the recent past attention has often been devoted to global environmental issues in which the level of policy making is either international through multi country agreements on emission control or national when environmental policies are designed to control domestic pollution Many environmental problems however have a local or regional dimension Even when their dimension is global e.g. in the case of the greenhouse gas effect relevant decisions on emission control such as the adoption of energy saving utilities are taken at the local level In many countries the current legislation imposes the local authorities to prepare plans and adopt measures to control energy consumption or to reduce waste of natural resources It is therefore important to analyze the way in which local or regional authorities optimise their environmental management

Inspiring Economics Bruno S. Frey, 2002-01-01 I highly recommend this book to all economists It is well written informative and a pleasure to read The first chapter in particular *Inspiring Dismal or Boring Economics* should be made required reading for all graduate students in economics and even more so for their professors especially at leading universities in the United States Yew Kwang Ng *Journal of Economic Literature* Instead of ignoring the challenge to rational behaviour posed by several anomalies in behaviour or abandoning rationality in the face of this challenge Bruno Frey's *Inspiring Economics* provides a valuable extension of rational behaviour to incorporate these anomalies This is an exhilarating study that I strongly recommend to everyone including those like myself who believe that the importance of these anomalies are sometimes exaggerated Gary S Becker Stanford University US Bruno Frey is one of a number of modern economists who believe as I do that economics should be importing rather than exporting ideas from elsewhere in the social sciences In these sparkling essays he shows that rational choice theory is enriched and sometimes revised by taking account of non monetary rewards and incentives With Frey economics once again becomes an inspiring behavioural science Mark Blaug University of London and University of Buckingham UK Economics can be inspiring often taking a stand against convention achieving challenging results discussing unorthodox viewpoints and suggesting new policies Bruno S Frey illustrates what he perceives to be the inspirational quality of economics and how this differs from the type of economics studied in many academic institutions He introduces insights into economics from a psychological perspective dealing with issues such as transformation of anomalies identification in democracy and crowding effects and focuses on intrinsic motivation and how it is undermined *Inspiring Economics* also looks at the integration of economics and politics covering topics including popular initiatives and referenda authoritarian nations and foreign aid and the way in which the cost of war is reflected on the capital market This groundbreaking empirical study of human motivation and behaviour will be a fascinating read for those interested in economics and economic theory
