Information Technology Borworn Papasratorn, Kittichai Lavangnananda, Wichian Chutimaskul, Vajirasak Vanijja, 2010-10-19 It was our intention to organize IAIT 2010 as the place where researchers and industrial practitioners could share their work and achievements in information technology both theoretical and in application This is the fourth time we have organized IAIT to serve as a venue to foster collaboration among industry and academia from different parts of the world A lot has been achieved since the launch of the first IAIT in 2005 however many challenges remain to be addressed in the years to come IAIT 2010 drew attendance from leading professionals in both industry and academes as in IAIT 2009 In addition to the relevant program offered by IAIT 2010 the conference provided an excellent environment to meet peers in the IT profession build relationships and exchange lessons learned During the conference participants presented and discussed the latest topics in information technology ranging from technical knowledge and experimentation to future strategic directions As the Internet continues to reach out even further almost everything in our daily life is accessible via IP addresses our societies need to recognize that we need new knowledge to make this advancement become a benefit to all life in this world It is almost impossible to gain this new knowledge without contributions from our colleagues working in various aspects of information technology Some times new knowledge found in one area can help simplify difficult task in another Together we can make our world better by creating applications from information technology

Computer Supported Cooperative Work in Design I Weiming Shen, Zongkai Lin, Jean-Paul A. Barthès, Tangqiu Li, 2005-11-03 The design of complex artifacts and systems requires the cooperation of multidisciplinary design teams using multiple commercial and non commercial engineering tools such as CAD tools modeling simulation and optimization software engineering databases and knowledge based systems Individuals or individual groups of multidisciplinary design teams usually work in parallel and separately with various engineering tools which are located on different sites often for quite a long time At any moment individual members may be working on different versions of a design or viewing the design from various perspectives at different levels of detail In order to meet these requirements it is necessary to have effective and efficient collaborative design environments These environments should not only automate individual tasks in the manner of traditional computer aided engineering tools but also enable individual members to share information collaborate and coordinate their activities within the context of a design project CSCW computer supported cooperative work in design is concerned with the development of such environments
