Soho Mission:

The SOHO Mission Bernhard Fleck, Vicente Domingo, Arthur I. Poland, 2012-12-06 SOHO the Solar and Heliospheric Observatory is a project of international cooperation between ESA and NASA to study the Sun from its deep core to the outer corona and the solar wind To achieve its scientific goals it carries a complement of twelve sophisticated state of the art instruments Three helioseismology instruments are expected to provide unique data for the study of the structure and dynamics of the solar interior from the very deep core to the outermost layers of the convection zone A set of five complementary remote sensing instruments consisting of EUV and UV imagers spectrographs and coronagraphs will give us our first comprehensive view of the outer solar atmosphere and corona leading to a better understanding of the enigmatic coronal heating and solar wind acceleration processes Finally three experiments will complement the remote sensing observations by making in situ measurements of the composition and energy of the solar wind and charged energetic particles This volume contains detailed descriptions of all the twelve instruments on board SOHO Also included are an overview paper and a description of the SOHO ground system science operations and data products The aim of these papers is to make the broader scientific community and in particular potential guest investigators aware of the scientific objectives and capabilities of the SOHO payload and to provide a reference document for the various instruments

Third International Symposium on Space Mission Operations and Ground Data Systems, Part 2, 1994 The STEREO Mission C.T. Russell, 2008-07-18 C T Russell Originally published in the journal Space Science Reviews Volume 136 Nos 1 4 DOI 10 1007 s11214 008 9344 1 Springer Science Business Media B V 2008 The Sun Earth Connection is now an accepted fact It has a significant impact on our daily lives and its underpinnings are being pursued vigorously with missions such as the Solar TERrestrial RELations Observatory commonly known as STEREO This was not always so It was not until the middle of the nineteenth century that Edward Sabine connected the 11 year geomagnetic cycle with Heinrich Schwabe's deduction of a like periodicity in the sunspot record The clincher for many was Richard Carrington's sighting of a great white light arc on the Sun on September 1 1859 followed by a great geomagnetic storm 18 hours later But was the Sun Earth Connection significant to terrestrial denizens Perhaps in 1859 it was not but a century later it became so Beginning in the 1930s as electrical power grids grew in size power companies began to realize that they occasionally had power blackouts during periods of intense geomagnetic activity This correlation did not appear to be sufficiently significant to bring to the attention of the public but during the International Geophysical Year IGY when geomagnetic activity was being scrutinized intensely the occurrence of a large North American power blackout during a great magnetic storm was impossible to ignore

Multiscale Coupling of Sun-Earth Processes A.T.Y. Lui,Y. Kamide,G. Consolini,2005-07-06 Many approaches exist for scientific investigations and space research is no exception The early approach during which each space plasma region within the Sun Earth system was investigated separately with physics based tools has now progressed to encompass investigations on coupling between these regions Ample evidence now exists indicating the dynamic processes in these regions exhibit disturbances over a wide range of scales both in time and space This new reckoning naturally leads to an emerging perspective of probing these natural phenomena with concepts and tools developed in modern statistical mechanics for physical processes governing the evolution of out of equilibrium and complex systems These new developments have prompted a topical conference on Sun Earth connection held on February 9 13 2004 at Kailua Kona

Hawaii USA with the goal of promoting interactions among scientists practicing the traditional physics based approach and those utilizing modern statistical techniques This monograph is a product of this conference a compilation of thirty nine articles assembled into seven chapters 1 multiscale features in complexity dynamics 2 space storms 3 magnetospheric substorms 4 turbulence and magnetic reconnection 5 modeling and coupling of space phenomena 6 techniques for multiscale space plasma problems and 7 present and future multiscale space missions These articles show a diversity of space phenomena exhibiting scale free characteristics intermittency and non Gaussian distributions of probability density function of fluctuations in the physical parameters of the Sun Earth system The scope covers the latest observations theories simulations and techniques on the multiscale nature of Sun Earth phenomena and underscores the usefulness in cross disciplinary exchange needed to unravel the underlying physical processes which may eventually lead to a possible unified description and prediction for space disturbances Extensive collection of state of the art papers on multiscale coupling of Sun Earth Processes Present and future multiscale space missions New techniques and models for performing multiscale analysis
