Goldshmid, 2012-12-06 The unsaturated zone is the medium through which pollutants move from the soil surface to groundwater Polluting substances are subjected to complex physical chemical and biological transformations while moving through the unsaturated zone and their displacement depends on the transport properties of the water air porous medium system Pollution caused by human activities agriculture and industry has brought about a growing interest in the role of the unsaturated zone in groundwater pollution Due to the complexity and the multidisciplinary nature of the subject it is being investigated by specialists from various scientific disciplines such as soil physicists chemists biologists and environmental engineers This state of affairs has motivated the initiative taken by the Water Quality Commissions of IUPAC the International Union of Pure and Applied Chemistry and IAHS the International Association of Hydrological Sciences to convene an international workshop which was organized and hosted by the Institute of Soils and Water of the Agricultural Research Organization in Bet Dagan Israel in March 1983 The lecturers at the workshop were an invited group of specialists who are engaged in studying the many facets of the unsaturated zone and the present book is a selection of their presentations Each chapter of the book relates to a different aspect of the unsaturated zone Organic Farming, Pest Control and Remediation of Soil Pollutants Eric Lichtfouse, 2009-10-15 Sustainable agriculture is a rapidly growing field aiming at producing food and energy in a sustainable way for humans and their children Sustainable agriculture is a discipline that addresses current issues such as climate change increasing food and fuel prices poor nation starvation rich nation obesity water pollution soil erosion fertility loss pest control and biodiversity depletion Novel environmentally friendly solutions are proposed based on integrated knowledge from sciences as diverse as agronomy soil science molecular biology chemistry toxicology ecology economy and social sciences Indeed sustainable agriculture decipher mechanisms of processes that occur from the molecular level to the farming system to the global level at time scales ranging from seconds to centuries For that scientists use the system approach that involves studying components and interactions of a whole system to address scientific economic and social issues In that respect sustainable agriculture is not a classical narrow science Instead of solving problems using the classical painkiller approach that treats only negative impacts sustainable agriculture treats problem sources Because most actual society issues are now intertwined global and fast developing sustainable agriculture will bring solutions to build a safer world This book series gathers review articles that analyze current agricultural issues and knowledge then propose alternative solutions It will therefore help all scientists decision makers professors farmers and
