Solar-terrestrial Predictions Proceedings Richard Frank Donnelly,1979 **Using Solar Radio Burst Integrated Fluxes to Predict Energetic Proton Flux Increases** William R. Barron,1982 Time integrated solar radio fluxes and their association with satellite observed solar energetic proton flux increases have been studied The time integration was only of the U portion of the radio burst flux increase The best correlations between the integrated radio fluxes and the proton peak fluxes were realized when the radio fluxes were multiplied by the factor $\exp 3B$ where B is the angular distance in radians between the site of the flare and the solar footpoint of the magnetic field connection between the sun and the earth The solar footpoint positions were determined from the solar wind speed Two variate linear regressions were computed using the time integrated radio fluxes at five discrete radio frequencies in the 606 to 8800 MHz frequency interval and peak proton fluxes at 10 MeV and 30 MeV The higher frequencies of 2695 4995 and 8800 MHz all correlated better with the 10 MeV protons than the lower frequencies The 30 MeV protons were even better correlated with the higher frequencies but correlation with the lower frequencies were poorer The Total Energy Density $E_{\text{sub T}}$ of the radio burst an integration across the frequency interval of the time integrated radio fluxes at each frequency was found to be better correlated with the proton fluxes than any of the individual frequencies

held in Potsdam Germany September 7 11 1992 **Peak-flux-density Spectra of Large Solar Radio Bursts and Proton Emission from Flares** Edward W. Cliver, 1985 We have reexamined the relationship between U shaped peak flux density microwave spectra and solar proton events for approx 200 large Sp or 2GHz or 800 solar flux units sfu microwave burst 1965 1979 The radio spectra fell into two basic classes a U shaped with two maxima or 800 sfu in the range from 200 MHz to or 10 GHz 59 percent of all events and b cutoff spectra with a maximum or 800 sfu at f or 2 GHz and Sp 200 MHz 100 sfu 18 percent Nine percent of the events had intermediate spectra with a maximum or 800 sfu at f or 2 GHz and 100 sfu or Sp 200 MHz 800 sfu We were unable to classify 15 percent of the events because of incomplete data The associations of the three classes of spectra with Type II and or Type IV meter wavelength bursts and 10 MeV proton events of any size or 0.01 pr per sq cm per sec per sr are as follows U shaped Type II IV 90 percent of large microwave bursts with U shaped spectra are associated with Type II IV events protons 77 percent intermediate Type II IV 78 percent protons 73 percent and cutoff Type II IV 22 percent protons 33 percent These statistics affirm various lines of evidence linking coronal shock waves and interplanetary proton events They also suggest that the meter wavelength branch of the U shaped spectrum may be attributable to second phase vs flash phase accelerated electrons **Exploration of the Polar Upper Atmosphere** C.S. Deehr, J.A. Holtet, 2012-12-06 This book is an ordered collection of tutorial lectures on the physical processes in the polar upper atmosphere given at the NATO Advanced Study Institute ASI on The Exploration of the Polar Upper Atmosphere held at Lillehammer Norway May 5 16 1980 The polar cap is an important part of the high latitude atmosphere not only because of circulation and horizontal transport in the neutral atmosphere and convection in the ionosphere but also because of its unique energy sources and sinks In addition solar wind plasma is led into the upper atmosphere by the geomagnetic field at the poles and the polar cap is as stated by Tutorial Leader Roederer in this volume the place where outer space meets earth The atmosphere at lower latitudes is well known to the ground based observer and the advent of satellite observations was simply the beginning of a new perspective The exploration of the atmosphere at polar latitudes however proceeded in quite the opposite manner and satellite maps of the polar caps may be compared with a relatively meagre set of ground based data Recent efforts to extend the polar observations from the ground have resulted in the need for a review of the physical principles and processes occurring in the polar upper atmosphere The interdisciplinary nature of these efforts led to the emphasis here on a tutorial program ***Ionospheric Radio*** Kenneth Davies, 1990 This introductory text replaces two earlier publications Davies 1965 1969 Among the topics characteristics of waves and plasma the solar terrestrial system the Appleton formula radio soundings of the ionosphere morphology of the ionosphere oblique propagation importance of amplitude and phase earth space propagation Annotation copyrighted by Book News Inc Portland OR **Space Environment Center** Space Environment Center (U.S.), 1996 **Storms in Space** John W. Freeman, 2001-10-11 This book is the story of the mysterious region between Earth and the Sun where violent storms rage unseen by human eyes
