Solid Waste Management With Earthworms:

Solid Waste Management with Earthworms Shahid A. Abbasi, E. Ramasami, 2001-01-01 Contrary to popular belief the biggest problem of environment pollution in the Third World countries including India is not caused by industrial emissions or nuclear wastes Rather it is caused by the day to day living of human beings The resulting solid waste sewage and nightsoil pose the most widespread and daunting of all environmental pollution problems This book provides an introduction to the fascinating world of earthworms and tells us how very useful these lowly creatures are The look then zeros on the role of earthworms in handling biodegradable solid wastes We believe the book shall be a very interesting as well as useful to the global expertise Contents Waste and Wealth Earthworms Impact of Earthworms on Soil and Agriculture Vermiculture Present Status of Solid Waste Generation and Disposal Composting and Vermicompositing Vermicomposting Systems R D on Vermitechnology at the Centre for Pollution Control and Energy Technology Some Prominent Experts **Compendium on Solid Waste Management by Vermicomposting** Camp, Dresser & McKee, 1980 *Earthworms for Solid Waste Management*, 2007 One Earth and one Humanity should be our motto as this planet is the only place in the Universe known to sustain life Human activities are progressively reductioning the planet s life supporting capacities by adding million tons of Organic Waste every day into the environment **Earthworm Technology in Organic Waste Management** Kui Huang, Sartaj Ahmad Bhat, Fusheng Li, Vineet Kumar, 2023-10-08 Earthworm Technology in Organic Waste Management Recent Trends and Advances is a suitable contribution to the Waste and The Environment Underlying Burdens And Management Strategies series that will be helpful in classifying and broadly addressing assessments mitigation strategies and the management of organic wastes using earthworms In addition the book provides a summary of the latest findings on emerging pollution related issues their sustainable management and future perspectives The book covers recent trends and developments in organic waste management including the use of earthworms in municipal and industrial waste management the role of earthworms in vermifiltration vermiwash and of vermicompost in crops Finally the book covers the potential of earthworms in the remediation of emerging contaminants This includes antibiotic resistance genes heavy metals pesticides microplastics and other emerging pollutants that are not covered in depth in previously published titles Covers a broad range of information on different aspects of organic waste treatment by earthworm technology Illustrates how earthworms can be used in modeling assessment and management of environmental issues caused by geogenic industrial and emerging pollutants Highlights the reuse and recycling of industrial and municipal organic waste and recovery of value added resources from organic waste *Solid Waste Management* Subhash Anand, 2010 Study conducted in Delhi India **Earthworm Assisted Remediation of Effluents and Wastes** Sartaj Ahmad Bhat, Adarsh Pal Vig, Fusheng Li, Balasubramani Ravindran, 2020-07-01 This book provides updated and comprehensive information on the effective functioning of earthworms used alone or in combination with other biological systems microbes as well as factors affecting

the process and performance of vermi-remediation under a range of conditions. It also compares earthworm assisted vermifiltration with other conventional biochemical methods. Presenting cutting edge research on the earthworm assisted remediation of industrial and municipal effluents and sludges along with its role in solid waste management, SWM, the book will benefit readers from the research community and industrial sector alike, familiarizing them with the latest remediation techniques for wastewater and different types of solid waste.

Earthworms - the Waste Managers Rajiv Kumar Sinha, 2011. Millions of tons of municipal solid wastes (MSW) comprising a great proportion of food green garden wastes generated from homes and institutions are ending up in the landfills everyday creating extraordinary economic problems for the local government and environmental problems for the society due to increasingly high cost of landfill construction waste disposal and monitoring for emission of powerful greenhouse gases, toxic gases and discharge of leachate with serious risk of polluting groundwater. Studies indicate that vermi-composting of food and garden wastes by waste eater earthworms is more efficient over the conventional aerobic systems. This book explores the possibilities of management in this area.

Prospects of Organic Waste Management and the Significance of Earthworms Katheem Kiyasudeen S, Mahamad Hakimi Ibrahim, Shlrene Quaik, Sultan Ahmed Ismail, 2015-12-14. The main aim of this book is to bridge the gap between aerobic and anaerobic waste treatments by concentrating on studies of earthworms. In particular, vermicomposting is being discussed as well as its properties and applications. Other subjects touch on the treatment of palm oil mill effluents, the various importance of earthworms, its scope and future aspects of earthworm research and the impact of waste management practices on human health.

Earthworms and Vermicomposting Sohan Singh Walia, Tamanpreet Kaur, 2024-01-10. This book explains the lifecycle of earthworms, biological features, multiplication of worms, species of earthworms that are suitable for vermicomposting, different sources of vermicompost, nutrient recovery and different procedures for making of vermicompost and importance of application of vermicompost in cereal, fruit and vegetable crops. The tremendous increase in population, urbanization, industrialization and agricultural production results in accumulation of quantities of solid wastes. This has created a serious problem in the environment. In order to dispose this waste safely, it should be converted effectively. This is achieved by bio-composting and vermicomposting of farm, urban and agro-industrial waste. It is being increasingly realized that composting is an environment friendly process that converts a wide variety of wastes into valuable agricultural inputs. Compost is an excellent source of humus and plant nutrients on application of which improves soil biophysical properties and organic matter status of the soil. India generates about 350 million tonnes of agricultural waste every year. Agricultural wastes include crop residues, weeds, leaf litter, sawdust, forest waste and livestock waste. Under appropriate conditions, worms eat agricultural waste and reduce the volume by 40 to 60%. Vermicompost produced by the activity of earthworms is rich in macro and micro nutrients, vitamins, growth hormones, enzymes such as proteases, amylases, lipase, cellulase and chitinase and immobilized microflora. This book will assist farmers, students and scholars to guide them about the lifecycle of earthworms, biological features.
