

Solid Wastes and Residues

Conversion by Advanced
Thermal Processes

Waste-to-Energy (WtE) plants are designed to convert solid waste into energy, typically through incineration. These plants can generate electricity and heat, providing a sustainable solution for waste management. The process involves the combustion of waste in a controlled environment, where the heat released is used to produce steam, which drives turbines to generate electricity. WtE plants also help reduce the volume of waste sent to landfills, thereby minimizing environmental impact.

Advanced thermal processes (ATPs) are a class of technologies that use high temperatures to break down complex organic materials into simpler compounds. These processes can be used for the conversion of solid waste into energy, as well as for the production of biofuels and other valuable products. ATPs typically involve the use of catalysts and high-pressure environments to facilitate the breakdown of waste. The resulting products can be used in a variety of ways, from generating energy to creating raw materials for other industries.
