Written by two well known chemical engineers this book reviews the scientific and engineering bases for solid fluid separation processes in an approachable style. Coverage focuses on fluid dynamics gravity centrifugal and membrane separations filter cake formation de liquoring and washing. Complete with an extensive bibliography to allow readers to pursue topics in greater depth. Help readers to understand how filtration processes work. Facilitate the application of knowledge to start up and existing processes helping readers to improve process performance. Help ensure your equipment is appropriate for its purpose and is working optimally saving time and money.

Industrial Separation Processes André B. de Haan, H. Burak Erat, Boelo Schuur, 2025-05-06 Separation processes on an industrial scale account for well over half of the capital and operating costs in the chemical industry. Knowledge of these processes is key for every student of chemical or process engineering and makes this book with its wealth of exercises and solutions ideally suited to university teaching. The Third edition boasts an even greater number of applied examples and updated chapters on drying adsorption and membranes.

Handbook of Industrial Water Soluble Polymers Peter A. Williams, 2008-04-15 Natural and synthetic water soluble polymers are used in a wide range of familiar industrial and consumer products including coatings and inks papers adhesives cosmetics and personal care products. They perform a variety of functions without which these products would be

significantly more expensive less effective or both Written for research development and formulation chemists technologists and engineers at graduate level and beyond in the fine and specialty chemicals polymers food and pharmaceutical industries the Handbook of Industrial Water Soluble Polymers deals specifically with the functional properties of both natural and synthetic water soluble polymers By taking a function based approach rather than a polymer specific approach the book illustrates how polymer structure leads to effect and shows how different polymer types can be employed to achieve appropriate product properties
