Hobbs, Norman Uphoff, 2004-05-24 Addressing a topic of major importance to the maintenance of world food supplies this reference identifies knowledge gaps defines priorities and formulates recommendations for the improvement of the rice wheat farming system The book reveals new systems of rice intensification and management and illustrates the application of no till and conser

Competitive Sorption and Transport of Heavy Metals in Soils and Geological Media H. Magdi Selim, 2016-04-19 Most reported incidents of soil contamination include an array of heavy metals species rather than a single ion The various interactions in these multicomponent or multiple ion systems significantly impact the fate and transport of heavy metals and competition for sorption sites on soil matrix surfaces is a common phenomenon Because of this con *Conservation Agriculture* Ram A. Jat, Kanwar L. Sahrawat, Amir H. Kassam, 2013-12-13 The book covers the spread of conservation agriculture CA to regions including Brazil Argentina Canada Australia Europe and emerging CA destinations in Asia and Africa Topics covered include the various components of CA and how their individual and combined implementation influence productivity soil health and environmental quality under diverse edaphic and climatic conditions The book will be useful to teachers researchers extensionists farmers and students interested in environmental quality **Nitrogen Fixation in**

Tropical Cropping Systems K. E. Giller, 2001 Nitrogen fixation by leguminous plants is especially important when farmers are trying to minimise fertilizer use for cost or environmental reasons This second edition of the highly successful book first published in 1991 contains thoroughly updated and revised material on the theory and practice of nitrogen fixation in tropical cropping systems **Soil Tillage in Agroecosystems** Adel El Titi, 2002-12-26 Building on our knowledge of soil

ecology under natural undisturbed conditions Soil Tillage in Agroecosystems focuses on how cultivation affects soil and the soil environment In particular it highlights how methods of soil tillage can influence soil structure soil chemical processes soil borne pathogens and pest species Covering the aspects of soil tillage on different taxa the book concludes with a synthesis of the role of soil tillage in securing a sustainable agricultural environment It provides the scientific basis for choosing different tillage options to achieve the best possible sustainable base for long lasting agricultural production **Agroecological**

Innovations Norman Uphoff, 2013-06-17 The world's food supply needs to rise significantly yet both arable and water supplies per capita are decreasing Not only are modern agricultural methods beyond the reach of those suffering the greatest food insecurity but they are also ecologically damaging relying upon fossil energy and chemical inputs This volume offers a collection of innovative and diverse approaches to agricultural development Documented in 12 case studies these approaches are reliant upon greater knowledge skill and labour input rather than larger capital expenditure They are shown to increase yield substantially sometimes doubling or tripling output This volume presents the concepts and operational means for reorienting agricultural efforts towards these more environmentally friendly and socially desirable approaches in

the developed as well as developing world **Biological Nitrogen Fixation** Frans J. de Bruijn, 2015-06-12 Nitrogen is arguably the most important nutrient required by plants. However, the availability of nitrogen is limited in many soils and although the earth's atmosphere consists of 78.1% nitrogen gas (N₂), plants are unable to use this form of nitrogen. To compensate, modern agriculture has been highly reliant on industrial nitrogen fertilizers to achieve maximum crop productivity. However, a great deal of fossil fuel is required for the production and delivery of nitrogen fertilizer. Moreover, carbon dioxide (CO₂) which is released during fossil fuel combustion contributes to the greenhouse effect and run-off of nitrate leads to eutrophication of the waterways. Biological nitrogen fixation is an alternative to nitrogen fertilizer. It is carried out by prokaryotes using an enzyme complex called nitrogenase and results in atmospheric N₂ being reduced into a form of nitrogen. Diazotrophic organisms and plants are able to use ammonia. It is this process and its major players which will be discussed in this book. *Biological Nitrogen Fixation* is a comprehensive two-volume work bringing together both review and original research articles on key topics in nitrogen fixation. Chapters across both volumes emphasize molecular techniques and advanced biochemical analysis approaches applicable to various aspects of biological nitrogen fixation. Volume 1 explores the chemistry and biochemistry of nitrogenases, nif gene regulation, the taxonomy, evolution, and genomics of nitrogen-fixing organisms as well as their physiology and metabolism. Volume 2 covers the symbiotic interaction of nitrogen-fixing organisms with their host plants, including nodulation and symbiotic nitrogen fixation, plant and microbial omics, cyanobacteria, diazotrophs, and non-legumes, field studies, and inoculum preparation as well as nitrogen fixation and cereals. Covering the full breadth of current nitrogen fixation research and expanding it towards future advances in the field, *Biological Nitrogen Fixation* will be a one-stop reference for microbial ecologists and environmental microbiologists as well as plant and agricultural researchers working on crop sustainability. *Advances in Conservation Agriculture Volume 1* Prof. Amir Kassam, 2020-01-21 Reviews the development of CA systems globally and elaborates on the science underlying the key CA system components. Assesses the latest evidence on improving soil and crop health and CA system resilience through the application of the core CA system principles. Includes case studies reviewing current science on optimising CA cropping systems involving cereal-legume, horticultural, and tree crops as well as integrating livestock in CA systems. *Demand-driven technologies for sustainable maize production in West and Central Africa*, *Bragantia*, 2010
