Software Cost Estimation And Sizing Methods Issues And Guidelines:

Software Cost Estimation and Sizing Methods Shari Lawrence Pfleeger, Felicia Wu, Rosalind Lewis, 2005

Recommends an approach to improving the utility and accuracy of software cost estimates by exposing uncertainty in understanding the project and reducing the risks associated with developing the estimates. The approach focuses on characteristics of the estimation process such as which methods and models are most appropriate for a given situation and the nature of the data used such as software size describing symptoms and warning signs of risk in each factor and risk mitigation strategies.

Software Process and Product Measurement Juan J. Cuadrado-Gallego, René

Braungarten, Reiner R. Dumke, Alain Abran, 2008-08-19 This book constitutes the thoroughly refereed post proceedings of the International Workshop on Software Measurement IWSM Mensura 2007 held in Palma de Mallorca Spain in November 2007. The 16 revised full papers presented were carefully reviewed and selected for inclusion in the book. The papers deal with aspects of software measurement like function points measurement effort and cost estimates prediction industrial experiences in software measurement planning and implementing measurement measurement based software process improvement best practices in software measurement usability and user interaction measurement measurement of open source projects teaching and learning software measurement as well as new trends and ontologies for software measurement.

Software Process and Product Measurement Alain Abran, René Braungarten, Reiner R. Dumke, Juan J.

Cuadrado-Gallego, Jacob Brunekreef, 2009-11-09 This book constitutes the refereed proceedings of two joint events: the International Workshop on Software Measurement IWSM 2009 and the International Conference on Software Process and Product Measurement Mensura 2009 held in Amsterdam The Netherlands in November 2009. The 24 revised full papers presented were carefully reviewed and selected from numerous submissions for inclusion in the book. This book considers issues such as the applicability of measures and metrics to software, the efficiency of measurement programs in industry and the theoretical foundations of software engineering.

Engineering and Program Management David E. Stem, Michael Boito, Obaid Younossi, 2006 Systems engineering and program management SE PM constitute a large portion of the acquisition cost of military aircraft and guided weapons systems The goal of this study was the development of a set of cost estimating relationships that can be used to estimate the SE PM cost element for development and production of aircraft and weapons programs The authors investigate trends in SE PM costs over time to generate methods that cost analysts can use early in the life cycle of a program when little cost information is available Sources of Weapon System Cost Growth Joseph G. Bolten, Robert S. Leonard, Mark V.

Arena, Obaid Younossi, Jerry M. Sollinger, 2008-06-19 This analysis uses data from Selected Acquisition Reports to determine the causes of cost growth in 35 mature major defense acquisition programs Four major sources of growth are identified 1 errors in estimation and scheduling 2 decisions by the government 3 financial matters and 4 miscellaneous The analysis shows that more than two thirds of cost growth measured as simple averages is caused by decisions most of which involve quantity changes requirements growth and schedule changes **Product-Focused Software Process Improvement**

Muhammad Ali Babar, Matias Vierimaa, Markku Oivo, 2010-06-11 This book constitutes the refereed proceedings of the 11th International Conference on Product Focused Software Process Improvement PROFES 2010 held in Limerick Ireland in June 2010 The 28 revised full papers presented together with the abstracts of 2 keynote addresses were carefully reviewed and selected from numerous submissions The papers are organized in topical sections on software quality assurance agile software development software business software systems process quality software measurement and software process improvement **Historical Cost Growth of Completed Weapon System Programs** Mark V. Arena, 2006 This report is

one of a series from a RAND Project AIR FORCE project The Cost of Future Military Aircraft Historical Cost Estimating Relationships and Cost Reduction Initiatives The purpose of the project is to improve the tools used to estimate the costs of future weapon systems It focuses on how recent technical management and government policy changes affect cost This report focuses on the accuracy of cost estimates For our analysis we used a very specific sample of Selected Acquisition Report SAR data namely only programs that are complete or are nearly so The analysis indicates a systematic bias toward underestimating the costs and substantial uncertainty in estimating the final cost of a weapon system In contrast to the previous literature the cost growth was higher than previously observed We also found few correlations with cost growth but observed that programs with longer duration had greater cost growth and electronics programs tended to have lower cost growth Although there were some differences in the mean cost growth factors among the military departments the differences were not statistically significant While newer programs appear to have lower cost growth this trend appears to be

due to factors other than acquisition policies

Budget Estimating Relationships for Depot-level Reparables in the Air Force Flying Hour Program Gregory G. Hildebrandt, 2007 Budget estimating relationships BERs for flying depot level reparable DLRs explain the direct effect of specified variables on obligated funds associated with spare parts that directly support the U S Air Force USAF Flying Hour Program In FY02 net sales of DLRs to Air Force commands hit historic highs To provide the Air Force Cost Analysis Improvement Group with a tool to better understand the commands budgetary submissions we develop several explanatory BERs to understand why flying DLRs are at their particular levels Using longitudinal regression statistical methods we explain the historical net sales of flying DLRs using estimating models that relate net sales to the contemporaneous values of aircraft characteristics operational tempo and time related variables This is but one part of a larger project to develop better estimating methods for use by the acquisition community and to examine the impact of Air Force and DoD policies on weapon system costs The findings will also be of interest to those in the national security community who are involved in analyzing alternative military postures and to members of the aircraft industry s analytical community

Is Weapon System Cost Growth Increasing? Obaid Younossi, 2007 In recent decades there have been numerous attempts to rein in the cost growth of U S Department of Defense DoD acquisition programs Cost growth is the ratio of the cost estimate reported in a program s final Selected Acquisition Report SAR and the cost estimate baseline reported in a prior SAR issued at a particular milestone Drawing on prior RAND research new analyses of completed and ongoing weapon system programs and data drawn from SARs this study addresses the following questions What is the cost growth of DoD weapon systems What has been the trend of cost growth over the past three decades To address the magnitude of cost growth it examines cost growth in completed programs to evaluate the cost growth trend over time it provides additional analysis of a selection of ongoing programs This sample of ongoing programs permits a look at growth trends in the more recent past Changes in the mix of system types over time and dollar weighted analysis were also considered because earlier studies have suggested that cost growth varies by program type and the cost of the program The findings suggest that development cost growth over the past three decades has remained high and without any significant improvement
