Software-Agents and Liberal Order Dirk Nicolas Wagner, 2001 Liberal order and software agents long established ideas and modern technology are bridged The impulse for undertaking this effort comes from the observation that it becomes difficult for computer science alone to create order for and within machines The growing complexity of computer systems open networks like the Internet and the increasingly social role of software entities push the traditional quest for total global control out of reach Economic theory of social order offers extensive experience with such conditions so that it can complement and guide research in computer science It is shown that a common understanding between economics and computer science s sub field of distributed artificial intelligence is possible on the level of software agents On this basis four fundamental problems of social order are encircled first the requirement to overcome and prevent state of nature situations in the sense of Thomas Hobbes second the necessity to accommodate unpredictable individual actors third the challenge of exiting the small worlds of traditional software systems and fourth the ambition to reach a transaction cost efficient social order Economics can contribute to an understanding and to possible solutions of these problems by unfolding the idea of liberal order for software agents In a systematic analysis that covers the order of rules the model of the individual actor and the order of actions it is shown that the conditions for liberal order can be created without exception in agent environments

Intelligent Software Agents Walter Brenner, Rüdiger Zarnekow, Hartmut Wittig, 2012-12-06 2 chapter contains examples of intelligent agents arranged according to their application areas Chapter 7 closes with a prospective view of the future development of intelligent agents Everyone concerned with the Internet and the new possibilities of information and communication technology knows that nowadays there is no area that is developing faster The authors are aware of the dynamics of this research area and its effects when they describe such a fast developing area in a slow traditional medium like a book One thing is sure today when the book appears on the market new intelligent agents will already exist and some of the hypotheses made by this book will have been shown to be incorrect Why despite this does it make sense to write a classical book on this subject Is there an alternative Experience shows that the majority of the people in business and public life who make decisions on the use of new technologies continue to prefer books and articles in periodicals rather than electronic sources such as the Internet Or is there some other reason for the enormous success of Nicolas Negroponte's book Being Digital which we thank for multimedia and many concepts of the digital and networked world and even intelligent agents Today a book is still the only way to establish a new area

Multiple Criteria Decision Making in Application Layer Networks Frank Schneider, 2010-12 Diploma Thesis from the year 2008 in the subject Computer Science Commercial Information Technology grade 1.3 University of Bayreuth Lehrstuhl für Wirtschaftsinformatik BWL VII language English abstract This work is concerned with the conduct of Multiple Criteria Decision Making MCDM by intelligent software agents trading digital commodities in Application Layer Networks ALN such

as grids or clouds These agents consider trustworthiness in their course of negotiation and select offers with respect to product price and seller reputation To automate the selection process we seek an appropriate MCDM method that provides clear advice for an agent prior to negotiating We compare eleven well known MCDM methods and choose the TOPSIS approach of Hwang and Yoon since it produces comprehensible and plausible results with a justifiable amount of effort We modify the method and present a draft named xTOPSIS that promises intertemporal performance analysis for further automatation The resulting tool is finally tested and evaluated in the context of a scenario similar to the eRep Social Knowledge for e Governance project
