Software Factories in .NET Gunther Lenz, Christoph Wienands, 2006-11-22 The promise of software factories is to streamline and automate software development and thus to produce higher quality software more efficiently The key idea is to promote systematic reuse at all levels and exploit economies of scope which translates into concrete savings in planning development and maintenance efforts However the theory behind software factories can be overwhelming because it spans many disciplines of software development On top of that software factories typically require significant investments into reusable assets This book was written in order to demystify the software factories paradigm by guiding you through a practical case study from the early conception phase of building a software factory to delivering a ready made software product The authors provide you with a hands on example covering each of the four pillars of software factories software product lines architectural frameworks model driven development and guidance in context While the ideas behind software factories are platform independent the Microsoft .NET platform together with recent technologies such as DSL Tools and the Smart Client Baseline Architecture Toolkit makes an ideal foundation A study shows the different facets and caveats and demonstrates how each of these technologies becomes part of a comprehensive factory Software factories are a top candidate for revolutionizing software development This book will give you a great starting point to understanding the concepts behind it and ultimately applying this knowledge to your own software projects Contributions by Jack Greenfield Wojtek Kozaczynski Foreword by Douglas C Schmidt Jack Greenfield Jorgen Kazmeier and Eugenio Pace The Industrial Communication Technology Handbook Richard Zurawski, 2005-02-23 The Industrial Communication Technology Handbook focuses on current and newly emerging communication technologies and systems that are evolving in response to the needs of industry and the demands of industry led consortia and organizations Organized into two parts the text first summarizes the basics of data communications and IP networks then presents a comprehensive overview of the field of industrial communications This book extensively covers the areas of fieldbus technology industrial Ethernet and real time extensions wireless and mobile technologies in industrial applications the linking of the factory floor with the Internet and wireless fieldbuses network security and safety automotive applications automation and energy system applications and more The Handbook presents material in the form of tutorials surveys and technology overviews combining fundamentals and

advanced issues with articles grouped into sections for a cohesive and comprehensive presentation The text contains 42 contributed articles by experts from industry and industrial research establishments at the forefront of development and some of the most renowned academic institutions worldwide It analyzes content from an industrial perspective illustrating actual implementations and successful technology deployments

Information Control Problems in Manufacturing Technology 1989 E.A. Puente, L. Nemes, 2014-06-28 The Symposium presented and discussed the latest research on new theories and advanced applications of automatic systems which are developed for manufacturing technology or are applicable to advanced manufacturing systems The topics included computer integrated manufacturing simulation and the increasingly important areas of artificial intelligence and expert systems and applied them to the broad spectrum of problems that the modern manufacturing engineer is likely to encounter in the design and application of increasingly complex automatic systems
