Software Patents Knut Blind, Jakob Edler, Michael Friedewald, 2005-01-01 There has been continued debate in Europe over whether to change the patentability of software or so called computer implemented inventions and to follow the US model of allowing software patents The European debate has shown a severe lack of empirical analysis on the possible impact of software patenting that goes beyond interest driven rhetoric This book seeks to address this shortcoming by taking a two fold approach Firstly a survey of German software companies provides a representative overview of both general strategies to protect inventions and opinions regarding the future IPR regime in the context of innovation strategies including the importance and use of Open Source software Secondly a series of case studies illustrate the varying impacts that patents and other protection strategies can have in specific contexts This book provides both a theoretical overview of the economic impacts and policy implications of software patents and an empirical foundation upon which to base a discussion on how to shape the intellectual property regime for software

software industry was young software patents did not exist The USPTO didn't issue its first software patent until 1981 Since then tens of thousands of software patents have been issued on both sides of the Atlantic Anyone can be an infringer and many are Microsoft is reported to be at any given time defending themselves against 30 to 35 patent infringement lawsuits It has been suggested that the Linux kernel might infringe as many as 283 U S patents Blockbuster awards such as the 450 Microsoft was ordered to pay a tiny patent holding company named Eolas are fundamentally changing the way the software industry does business Economists politicians scientists academics legal experts engineers and computer programmers are all asking if this proliferation of software patents makes any sense There is a growing unease that the patent system has derailed and is going to take the software industry off the tracks with it At the same time it is increasingly clear that without patent protection it is impossible to protect the competitive advantages that result from technical innovations in software technology These two points of view collided last year in the European Parliament's debate over the European Commission's Directive for Computer Implemented Inventions A bitter and implacable row erupted over the Commission's Directive which was defeated with both sides claiming victory This book steps away from the rancour of the debate over software patents and takes a fresh look at the issue Eric Stasik author of Patent or Perish and founder of the patent engineering firm Patent08 www.patent08.com takes the reader through a brief history of software patents explains some of the problems this has created and illustrates why society still struggles with what Thomas Jefferson described as the difficulty of drawing a line between the things which are worth the public embarrassment of an exclusive patent and those which are not As Jefferson realized the answer is not so patently obvious

The Patentability of Software Anton Hughes,2019-02-18 This book explores the question of whether software should be patented It analyses the ways in which the courts of the US the EU and Australia have attempted to deal with the problems surrounding the patentability of software and describes why it is that the software patent issue should be dealt with as a patentable subject matter issue rather than as an issue of novelty or nonobviousness Anton Hughes demonstrates that the current approach has failed and that a fresh approach to the software patent problem is needed The book goes on to argue against the patentability of software based on its close relationship to mathematics Drawing on historical and philosophical accounts of mathematics in pursuit of a better understanding of its nature and focusing the debate on the conditions necessary for mathematical advancement the author puts forward an analytical framework centred around the concept of the useful arts This analysis both explains mathematics and therefore software s nonpatentability and offers a theory of patentable subject matter consistent with Australian American and European patent law **Patent Protection for Computer Software** ,1989
