Software Process Automation The Technology And Its Adoption Hardcover:

Software Process Automation Alan M. Christie, 2012-12-06 Process automation provides a means to integrate people in a software development organization with the development process and the tools supporting that development. This new technology may significantly improve software quality and development productivity. However, as yet there is little practical experience in its day-to-day use. This book is for those who wish to explore the technology or are considering its adoption. The monograph discusses the underlying concepts, reviews in some detail two of the major process automation products, relates process automation to process improvement, and provides adoption guidelines. Special emphasis is on the process modeling language ProNet, which is commercially available. The book is enriched by numerous examples, tables, and technical appendices. A Practical Guide to the Technology and Adoption of Software Process Automation Alan M. Christie, 1994. It is

hoped that the report will help bridge the gap between those whose focus is software process improvement and those whose focus is software technology. **A Practical Guide to the Technology and Adoption of Software Process Automation** Alan M. Christie, 1994. It is hoped that the report will help bridge the gap between those whose focus is software process improvement and those whose focus is software technology. **Software Process Automation**, 1997. Abstract: This report

describes the results of a two-year study of experiences with the adoption and use of software process automation. The work was motivated by a desire to provide insights and guidelines to those planning to implement this technology. The focus of the study was primarily, but not exclusively, on end-user organizations. The study was conducted in three stages. First, in-depth interviews were conducted to assess the state of the practice. Second, a survey questionnaire was distributed to a wider number of organizations to obtain more quantitative data. The populations in these two groups turned out to be quite different, a fact that we believe enriches the content of this report. Finally, a one-day workshop was held, the objective of which was to explore with practitioners why the gap between the theory and practice of software process automation is as large as it is. A previous report by Alan Christie et al. (Christie 96) documented the results of the in-depth interviews in detail. This report now summarizes the results of the interviews and describes in more detail the questionnaire survey and the workshop. It also provides both insight for process automation tool developers and guidelines for adoption to process automation end users.

Future Survey, 1982. *Official Export Guide* North American Publishing Company, 1994. **Current Index to Journals in Education**, 1992. *Practical Process Automation* Bernd Ruecker, 2021-03-16. In today's IT architectures, microservices and serverless functions play increasingly important roles in process automation. But how do you create meaningful, comprehensive, and connected business solutions when the individual components are decoupled and independent by design? Targeted at developers and architects, this book presents a framework through examples, practical advice, and use cases to help you design and automate complex processes. As systems are more distributed, asynchronous, and reactive, process automation requires state handling to deal with long-running interactions. Author: Bernd Ruecker.

Evolving Software Processes Arif Ali Khan,Dac-Nhuong Le,2022-01-05 EVOLVING SOFTWARE PROCESSES

The book provides basic building blocks of evolution in software processes such as DevOps scaling agile process in GSD in order to lay a solid foundation for successful and sustainable future processes One might argue that there are already many books that include descriptions of software processes The answer is yes but Becoming acquainted with existing software processes is not enough It is tremendously important to understand the evolution and advancement in software processes so that developers appropriately address the problems applications and environments to which they are applied Providing basic knowledge for these important tasks is the main goal of this book Industry is in search of software process management capabilities The emergence of the COVID 19 pandemic emphasizes the industry s need for software specific process management capabilities Most of today s products and services are based to a significant degree on software and are the results of largescale development programs The success of such programs heavily depends on process management capabilities because they typically require the coordination of hundreds or thousands of developers across different disciplines Additionally software and system development are usually distributed across geographical cultural and temporal boundaries which make the process management activities more challenging in the current pandemic situation This book presents an extremely comprehensive overview of the evolution in software processes and provides a platform for practitioners researchers and students to discuss the studies used for managing aspects of the software process including managerial organizational economic and technical It provides an opportunity to present empirical evidence as well as proposes new techniques tools frameworks and approaches to maximize the significance of software process management Audience The book will be used by practitioners researchers software engineers and those in software process management DevOps agile and global software development

Software Process Automation Alan M. Christie,1996 Abstract Software process automation is a new technology with significant promise However practical experience in the field is still limited and there appears to be a variety of potential barriers to its use The objective of this empirical study is to document current practical experience and to identify what works and what does not Lessons learned from the study will be disseminated to help others who wish to implement the technology This report documents results from the first phase of the study in which 14 in depth interviews were conducted Personnel interviewed were involved in projects in which process centered environments were developed and adopted
