Soil Management Problems And Solutions:

Soil Management Michael A Fullen, John A Catt, 2014-04-04 The soil is a fundamental constituent of the Earth's system maintaining a careful state of equilibrium within the biosphere. However, this natural balance is being increasingly disturbed by a variety of anthropogenic and natural processes leading to the degradation of many soil environments. Soil Management provides a comprehensive and authoritative introduction to the many problems, challenges, and potential solutions facing soil management in the twenty-first century. Covering a range of topics including erosion, desertification, salinization, soil structure, carbon sequestration, acidification, and chemical pollution, the book also develops a prognosis for the future of soil management in the face of growing populations and global warming. Written with the needs of students in mind, each chapter provides a broad overview of a problem, analyses approaches to its solution, and concludes with references and suggestions for further reading. Soil Management will be of great value to environmental science and geography undergraduates taking soil management courses in their second or third year.

Challenges and Solutions of Climate Impact on Agriculture Shah Fahad, Muhammad Adnan, Iqbal Munir, Rattan Lal, Taufiq Nawaz, Shah Saud, 2024-10-08 Challenges and Solutions of Climate Impact on Agriculture explores issues arising from the changing climate for agricultural plants with a soil-focused approach. Addressing the impacts on a range of important global food crops, it looks at issues of water and temperature and their impact on soil quality for production. Presented by a global team of experts, this book will be important for researchers seeking to understand specific challenges and means of addressing those challenges effectively and efficiently. The agriculture sector is arguably one of the most sensitive to changes in the climate. Because the climate of a region determines the nature and characteristics of vegetation and crops, any change in the mean seasonal temperature and decrease in effective precipitation can reduce productive periods for crops, risking outbreaks of pests and disease and negatively affecting global food security. Explains the impact of climate change on soil properties, productivity, and microbial diversity. Provides detailed information regarding the impact of climate change on yields of cereal grains and other crops. Enables agricultural scientists to design policies and management strategies for sustainable agriculture.

The basic soil problems and possible solutions in agriculture Suleiman Usman, 2011-05-20 Document from the year 2011 in the subject Agrarian Studies, University of Greenwich, language English, abstract. It is widely recognised that environmental problems such as soil degradation, erosion, and desertification affect many agricultural lands globally. These problems have caused soil quality decline, crop yield reduction, economic crisis, poverty, unemployment, and rural-urban migration. Soil management practices are considered as the most vital and sustainable possible solution to control soil erosion and desertification.
