Innovations as Key to the Green Revolution in Africa Andre Bationo, Boaz Waswa, Jeremiah M. Okeyo, Fredah Maina, Job Maguta Kihara, 2011-08-30 Africa can achieve self sufficiency in food production through adoption of innovations in the agriculture sector Numerous soil fertility and crop production technologies have been generated through research however wide adoption has been low African farmers need better technologies more sustainable practices and fertilizers to improve and sustain their crop productivity and to prevent further degradation of agricultural lands The agricultural sector also needs to be supported by functional institutions and policies that will be able to respond to emerging challenges of globalization and climate change

Inositol Phosphates Benjamin L. Turner, Alan E. Richardson, Edward J. Mullaney, 2007 Inositol phosphates are a group of organic compounds found widely in the natural environment They are important in agriculture because they constitute most of the phosphorus in grain seeds but they cannot be digested by some animals As a result considerable research has been directed towards improving the digestibility of inositol phosphates in animal diets Inositol phosphates are also abundant in soils and water bodies yet a clear understanding of their behaviour in the environment remains elusive This is surprising given the importance of phosphorus in the nutrition of both terrestrial and aquatic ecosystems Written by leading experts this book brings together critical reviews on inositol phosphates in agriculture ecology and the environment The sixteen chapters cover a diverse range of topics including the synthesis and hydrolysis of inositol phosphates their role in animal nutrition and their fate in soils and aquatic ecosystems It will prove valuable to a wide readership in the agricultural and biological sciences and will serve as a unique reference source on this emerging topic
