terms of contemporary issues it also serves to support urgent efforts to sustainably manage land to feed a growing world population without compromising the environment. It presents new methods of investigation which are leading to more sustainable management of ecosystems and improved understanding of ecosystem changes in an increasingly warmer world. The book approaches the topic by looking at the emergence of our understanding of soil biological processes and begins by tracing the conception and first measurement of soil microbial biomass. Following this, changes in ecosystems and in natural ecosystem processes are discussed in relation to land management issues and global change. Microbial biomass and its diversity are recognized as key factors in finding solutions for more sustainable land and ecosystem management aided by new molecular and other tools. Information from the use of these tools is now being incorporated into emerging microbial explicit predictive models to help us study changes in earth system processes. Perfect for use in research and practice, this book is written for undergraduate and graduate students, researchers and professionals of agronomy, chemistry, geology, physical geography, ecology, biology, microbiology, silviculture and soil science.

Microbial Ecology of Arid Terrestrial Systems Thulani P. Makhalanyane, Don Cowan, Jean-Baptiste Ramond, 2016-09-14 Water is usually referred to as the Molecule of Life It constitutes the most abundant molecule in living micro organisms and is also essential for critical biochemical reactions both for the global functioning and maintenance of Ecosystems e.g. Photosynthesis and individual microbial cells e.g. ATP hydrolysis However most of Earth's terrestrial environments present deficiencies in bioavailable water Arid environments cover around a third of the land's surface are found on the six continents and with the anthropogenic desertification phenomenon will increase Commonly defined by having a ratio of precipitation to potential evapotranspiration P/PET below 1 arid environments being either hot or cold are characterized by scant and erratic plant growth and low densities in macro fauna Consequently these ecosystems are microbially mediated with microbial communities particularly driving the essential N and C biogeochemical cycles Due to the relatively simple trophic structure of these biomes arid terrestrial environments have subsequently been used as ideal ecosystems to capture and model interactions in edaphic microbial communities To date we have been able to demonstrate that edaphic microorganisms i.e. Fungi Bacteria Archaea and Viruses in arid environments are abundant highly diverse different from those of other terrestrial systems both in terms of diversity and function and are important for the stability and productivity of these ecosystems Moreover arid terrestrial systems are generally considered Mars-like environments Thus they have been the favored destination for astro-microbiologists aiming to better understand life's potential distribution and adaptation strategies in the Universe and develop terraforming approaches Altogether these points demonstrate the importance of significantly improving our knowledge in the microbial community composition particularly for Fungi Archaea and Viruses assembly processes and functional potentials of arid terrestrial systems as well as their adaptation mechanisms to aridity and generally to various other environmental stresses This Research Topic was proposed to provide further insights on the microbial ecology of hot and cold arid edaphic systems We provide a detailed review and nine research articles spanning hot and cold deserts edaphic rhizospheric BSC and endolithic environments as well as culture dependent and independent approaches

*Microbial ecology and ecosystems from a Southern perspective* Veronica Molina, Yoanna Eissler, Céline Lavergne, Pilar Junier, 2023-01-06

Microbial Ecology Allen I. Laskin, 2018-01-18 The essays that comprise this anthology of the best in ecology from Critical Reviews in Microbiology

describe principles and practices in considerable detail There is no attempt however at a balanced presentation of the different groups of microorganisms or their activities Likewise some areas of current concern are considered cursorily and others not at all Nevertheless the book is an interesting and informative introduction to a growing endeavour The combined experience and insight of the contributing authors will surely aid the reader to develop an ecological attitude and to better appreciate microorganisms as determinants of environmental quality

**Microbial Ecology** Heinz Stolp, 1988-07-29 The rapid expansion of industry and the excessive demands made on limited natural resources have caused genuine concern at all levels of society In the past this concern has concentrated on plants and animals and their relationships with their environments but now attention is also turning towards microorganisms whose role is crucial to so many natural processes from global life and mineral cycles through to the production of beer and milk products After a brief introduction to microbiology this book concentrates on the ecological aspects of microbial life covering a wide variety of topics including structure behaviour growth dispersal interactions and how microbes act as symbionts and pathogens Such a wide ranging interdisciplinary approach will appeal to undergraduate and graduate students of microbiology plant and animal ecology agronomy forestry and environmental sciences Professionals working in the same fields will also find it informative as will those working in plant pathology and soil aquatic medical and food microbiology

**Microbial Ecology of Soil and Plant Growth** Pierre Davet, 2004-01-11 The book is divided into three parts that are logically connected The first part defines the principal characteristics of the subterranean world and describes the microorganisms that live there as well as the environmental constraints they are subjected to The second part shows how the action of the microorganisms can modify the physico chemical
