Soils and Quaternary Geology of the Southwestern United States David L. Weide, Marianne L. Faber, 1985

Geomorphology of Desert Environments Anthony J. Parsons, A. D. Abrahams, 2009-03-20 About one third of the Earth's land surface experiences a desert climate and this area supports approximately 15% of the planet's population. This percentage continues to grow and with this growth comes the need to acquire and apply an understanding of desert geomorphology. Such an understanding is vital in managing scarce and fragile resources and in mitigating natural hazards. This authoritative reference book is comprehensive in its coverage of the geomorphology of desert environments and is arranged thematically. It begins with an overview of global deserts, proceeds through treatments of weathering, hillslopes, rivers, piedmonts, lake basins, and aeolian surfaces, and concludes with a discussion of the role of climatic change. Written by a team of international authors, all of whom are active in the field, the chapters cover the spectrum of desert geomorphology.

Geological Criteria for Evaluating Seismicity Revisited Franck A. Audemard M., Alessandro Maria Michetti, James McCalpin, 2011 **U.S. Geological Survey Bulletin**, 1983 *Geological Survey Bulletin*, 1987 **U.S. Geological Survey Professional Paper**, 1984 *Past Glacial Environments* John Menzies, Jaap van der Meer, 2017-11-28 *Past Glacial Environments* Second Edition presents a revised and updated version of the very successful first edition of Menzies' book covering a breadth of topics with a focus on the recognition and analysis of former glacial environments including the pre-Quaternary glaciations. The book is made up of chapters written by various geological experts from across the world with the editor's expertise and experience bringing the chapters together. This new and updated volume includes at least 45% new material along with five new chapters that include a section on techniques and methods. Additionally, this new edition is presented in full color and features a large collection of photographs, line diagrams, and tables with examples of glacial environments and landscapes that are drawn from a worldwide perspective. Informative knowledge boxes and case studies are included, helping users better understand critical issues and ideas. Provides the most complete reference concerning the study of glacial processes and their geological, sedimentological, and geomorphological products. Comprised of chapters written by various geological experts from across the world. Includes specific case studies to alert readers to important ideas and issues. Uses text boxes throughout to explain key concepts from glacial literature. Presents full-color photographs, line diagrams, and tables throughout. Hot Deserts M. J. Walker, 2012 This volume provides an authoritative and comprehensive state-of-the-art review of hot desert terrains in all parts of the world, their geomaterials, and influence on civil engineering, site investigation, design, and construction. It primarily covers conditions and materials in modern hot deserts, but there is also coverage of unmodified ancient desert soils that exhibit engineering behaviour similar to modern desert materials. Thorough and up-to-date guidance on modern field evaluation and ground investigation techniques in hot arid areas is provided, including reference to a new approach to the desert model and detailed specialised assessments of the latest methods for

materials characterisation and testing The volume is based on world wide experience in hot desert terrain and draws upon the knowledge and expertise of the members of a Geological Society Engineering Group Working Party comprising practising geologists geomorphologists and civil engineers with a wealth of varied but complementary experience of working in hot deserts It is an essential reference book for professionals as well as a valuable textbook for students It is written in a style that is accessible to the non specialist A comprehensive glossary is also included The Geological Society of London Founded in 1807 the Geological Society of London is the oldest geological society in the world and one of the largest publishers in the Earth sciences The Society publishes a wide range of high quality peer reviewed titles for academics and professionals working in the geosciences and enjoys an enviable international reputation for the quality of its work **Soil**
