Solar And Interplanetary Disturbances:

Solar And Interplanetary Disturbances S K Alurkar, 1997-05-29 Over the last three decades a spate of solar wind observations have been made with sophisticated ground based and space borne instruments Two highly successful space missions of the Skylab and the twin spacecraft Helios 1 and 2 have amassed an invaluable wealth of information on the large scale structure of the inner heliosphere the solar and interplanetary magnetic field coronal holes interplanetary dust solar windflows etc Solar and interplanetary propagating phenomena have been extensively studied during the last two decades Very recently a new simple model based on results from a density mapping technique pioneered at Cambridge UK has been proposed which overcomes the problems faced by the existing CME driven shock theories This monograph puts together those exciting developments in the field of solar and interplanetary dynamic phenomena with their effects at times hazardous on the terrestrial environment It serves as an update and a ready reference for research students and scientists working in this field

Collisionless Shocks in the Heliosphere Robert G. Stone, Bruce T. Tsurutani, 1985 Published by the American Geophysical Union as part of the Geophysical Monograph Series Volume 35 Violent expansions of the solar corona cause transient shock waves which propagate outward from the sun at hundreds to thousands of kilometers per second simple solar wind velocity gradients at the surface of the sun lead to high speed streams overtaking slower streams forming corotating shocks and steady state supermagnetosonic solar wind flow past objects such as the planets lead to standing bow shocks However the solar wind plasma is so hot and tenuous that charged particle Coulomb collisions produce negligible thermalization or dissipation on scale sizes less than 0.1 AU The irreversible plasma heating by these shocks is accomplished by wave particle interactions driven by plasma instabilities Hence these shocks are described as collisionless

Cosmic Winds and the Heliosphere J. R. Jokipii,C. P. Sonett,Mark S. Giampapa,2018-01-30 Until the advent of space physics astrophysical plasmas could be studied only using ground based observations Although observational methods have advanced over recent decades the merging of heliospheric physics with astrophysics is far from complete due to the vastly

different techniques employed by astronomers and space physicists That astrophysical plasmas can be studied directly is a major advance in astrophysical research The solar wind from the Sun is only one of many examples of solar winds but it provides scientists with a basis for understanding how these formerly disparate disciplines are related Cosmic Winds and the Heliosphere is a comprehensive sourcebook on conceptually correlated topics in astrophysical winds and heliospheric physics The contributors review the various kinds of winds such as solar wind winds of cataclysmic variables and winds from pulsating stars They then examine the physics of wind origin and physical phenomena in winds including heliospheric shocks magnetohydrodynamic turbulence and kinetic phenomena A final section considers interactions with surrounding media with contributions ranging from studies of the interstellar cloud surrounding the solar system to considerations of solar wind interaction with comets Prepared to the scrupulous standards of the University of Arizona Space Science Series Cosmic Winds and the Heliosphere is an essential volume for astronomers and space physicists **Nuclear Science Abstracts**
