Chandrasekharam, Janusz Piechocki, 2017-08-02 The agri food chain consumes about one third of the world's energy production with about 12% of it for crop production and nearly 80% for processing distribution retail preparation and cooking The agri food chain also accounts for 80 90% of total global freshwater use where 70% alone is for irrigation Additionally on a global scale freshwater production consumes nearly 15% of the entire energy production It can therefore be argued that making agriculture and the agri food supply chain independent from fossil fuel use has a huge potential to contribute to global food security and climate protection not only for the next decades but also for the coming century Provision of secure accessible and environmentally sustainable supplies of water energy and food must thus be a priority One of the major objectives of the world's scientists farmers decisions makers and industrialists is to overcome the

present dependence on fossil fuels in the agro food sector This dependency increases the volatility of food prices and affects economic access to sustenance This book provides a critical review of recent developments in solar wind and geothermal energy applications in agriculture and the agro food sector such as processing distribution retail preparation and cooking
