Physics of Societal Issues David Hafemeister, 2013-12-12 This book provides the reader with essential tools needed to analyze complex societal issues and demonstrates the transition from physics to modern day laws and treaties. This second edition features new equation oriented material and extensive data sets drawing upon current information from experts in their fields. Problems to challenge the reader and extend discussion are presented on three timely issues: National Security, Weapons Offense, Defense Verification, Nuclear Proliferation, Terrorism, Environment, Air, Water, Nuclear Climate Change, EM Fields, Epidemiology, Energy, Current Energy Situation, Buildings, Solar Buildings, Renewable Energy, Enhanced End Use Efficiency, Transportation Economics. Praise for the first edition: This insight is needed in Congress and the Executive Branch. Hafemeister, a former Congressional fellow with wide Washington experience, has written a book for physicists, chemists, and engineers who want to learn science and policy on weapons, energy, and the environment. Scientists who want to make a difference will want this book. Richard Scribner, first Director, Congressional Science and Engineering Fellow Program, AAAS. Hafemeister shows how much one can understand about nuclear weapons and missile issues through simple back of the envelope calculations. He also provides compact explanations of the partially successful attempts that have been made over the past 60 years to control these weapons of mass destruction. Hopefully Physics of Societal Issues will help interest a new generation of physicists in continuing this work. Frank von Hippel, Professor, Princeton, former Assistant Director, National Security, White House OSTP. Energy policy must be quantitative. People who don't calculate economic tradeoffs often champion simplistic hardware. The solution is more nuclear power or electric cars or photovoltaics etc. Some simple physics will show that the true solution matches supply and demand as an integrated resource plan. Physics of Societal Issues is a good place to begin this journey. Arthur Rosenfeld, former California Energy Commissioner, Professor emeritus, U of California, Berkeley.

Portugal SB07. Sustainable Construction, Materials and Practices Luis Bragança, Manuel D. Pinheiro, Said Jalali, Ricardo Mateus, Rogério Amoêda, Manuel Correia Guedes, 2007-08-15 The construction industry is a vibrant and active industry. The building sector is responsible for creating, modifying, and improving the living environment of humanity. On the other hand, construction and buildings have considerable environmental impacts, consuming a significant proportion of limited resources of the planet, including energy, raw material, water, and land. Therefore, the sustainability of the built environment, the construction industry, and the related activities is a pressing issue facing all stakeholders in order to promote Sustainable Development. The new millennium is challenging practitioners and researchers with the sustainability of the built environment and the construction industry. Hence, the main purpose of this publication is to discuss these challenges and present solutions that actively facilitate and promote the adoption of policies, methods, and tools to accelerate the movement towards a global sustainable built environment. The issues presented include Building sustainability assessment tools, Indoor environment quality and benchmarks, Sustainable resources and materials use, Use of non conventional materials,
