Solar System Exploration ,2006 **Origin of Elements in the Solar System** Oliver K. Manuel,2007-05-08 Based on an American Chemical Society Symposium organized by Professors Glenn Seaborg and Oliver Manuel this volume provides a comprehensive record of different views on this important subject at the end of the 20th century They have assembled a blend of highly respected experimentalists and theorists from astronomy geology meteoritics planetology and nuclear chemistry and physics to discuss the origin of elements in the solar system The intent was to include all points of view and let history judge their validity *International Catalogue of Scientific Literature, 1901-1914* ,1912 Strategy for the Detection and Study of Other Planetary Systems and Extrasolar Planetary Materials National Research Council,Division on Engineering and Physical Sciences,Space Studies Board,Committee on Planetary and Lunar Exploration,1990-02-01 This volume addresses a new opportunity in the planetary sciences to extend our exploration outward to discover and study planetary systems that may have formed or are forming around other stars It concludes that a coordinated program of astronomical observation laboratory research theoretical development and understanding of the dynamics and origins of whatever may be found would be a technologically feasible and potentially richly rewarding extension of the study of bodies within the solar system A Classified Catalogue of Manuscripts Wesley, William, & son, London,1910 **The John Crerar** ,1909 **International Catalogue of Scientific Literature** ,1912 A List of Books in the Reading Room, 1909 John Crerar Library,1909 *Planets Outside the Solar System: Theory and Observations* Jean-Marie Mariotti,D.M. Alloit,2012-12-06 The question of the existence of other worlds and other living beings has been present in the human quest for knowledge since as far as Epicurus For centuries this question belonged to the fields of philosophy and theology The theoretical problem of the formation of the Solar System and hence of other planetary systems was tackled only during the 18th century while the first observational attempts for a detection started less than one hundred years ago Direct observation of an extra solar planetary system is an extraordinarily difficult problem extra solar planets are at huge distances are incredibly faint and are overwhelmed by the bright light of their own stars With virtually no observational insight to test their models theoreticians have remained for decades in a difficult position to make substantial progress Yet the field of stellar formation has provided since the 1980s both the the oretical and observational evidences for the formation of discs at the stage of star birth and for debris materials orbiting the very young stellar systems It was tempting to consider that these left overs might indeed later agglomerate into planetary systems more or less similar to ours Then came observational evidences for planets outside the Solar System The Solar System Charles Lane Poor,1908
