Learning Dynamic Spatial Relations Andreas Bihlmaier, 2016-08-12 Andreas Bihlmaier describes a novel method to model dynamic spatial relations by machine learning techniques. The method is applied to the task of representing the tacit knowledge of a trained camera assistant in minimally invasive surgery. The model is then used for intraoperative control of a robot that autonomously positions the endoscope. Furthermore, a modular robotics platform is described which forms the basis for this knowledge based assistance system. Promising results from a complex phantom study are presented.
