influential Italian architectural historian Manfredo Tafuri 1935 1994 invoked the productive possibilities of crisis writing that history is a project of crisis progetto di crisi In this entry in the Writing Architecture series Marco Biraghi explores Tafuri's multifaceted and often knotty oeuvre using the historian's concept of a project of crisis as a lens through which to examine his historical construction of contemporary architecture Mindful of Tafuri's statement that there is no such thing as criticism only history Biraghi carefully maps the influences on Tafuri's writing Walter Benjamin Karl Krauss Massimo Cacciari and the architect Ludovico Quaroni among others in order to create a portrait of one of the most complex minds in twentieth century architecture and architectural history Tracing an arc from Tafuri's first articles in the magazine Contropiano to the idea of contradiction at the center of the project of crisis Biraghi cites Tafuri's writing on some of his contemporaries including Louis Kahn Le Corbusier Robert Venturi Aldo Rossi and the Five Architects Peter Eisenman Michael Graves Charles Gwathmey John Hejduk and Richard Meier Tafuri's historical construction of the contemporary Biraghi explains is based on the idea that the past is open providing the present with ever changing and indeterminate form There is no contradiction between Tafuri the historian and Tafuri the contemporary critic only the greatest possible integration The importance of Tafuri's interpretation of architecture goes beyond mere academic or historiographic interest Biraghi argues Tafuri's notion of the project of crisis is fundamentally important in understanding our present day architectural condition

The Political Afterlife of Sites of Monumental Destruction Andrea Connor, 2017-06-14 What happens when a monumental thing is physically destroyed Is its life as a socially significant presencing thing at an end Or might the process of destruction work to enhance its symbolic force mediating work and presencing power In this book Andrea Connor traces the afterlife of two exemplary examples of monumental destruction and their re investment with cultural value and symbolic significance In 1993 during the Bosnian war the Mostar Bridge was completely destroyed Reconstructed in 2004 as an exact copy of the original this new Old Bridge has assumed an afterlife as an intentional monument to reconciliation The World Trade Centre in New York has also been transformed since its destruction in 2001 as a place of national mourning and remembrance a symbolic void marking a singular act of terrorism Using recent work on affect and object agency Connor considers their contested reconfiguration as sites of collective remembering and forgetting in new highly charged political contexts She argues for a more expansive notion of reconstruction encompassing not only the material and symbolic afterlife of both things but also their affecting afterlives as they are re assembled in the present Provoking a reconsideration of the way monuments and heritage sites even in their absence become powerful agents of historical narrativization this work will be of interest to students and scholars in a range of fields including international relations cultural studies critical heritage studies and material culture studies

Second Century of the Skyscraper Council on Tall Buildings & Urban, 2012-12-06 tenant is looming in importance The owner is having more influence on the building As Gerald D Hines has said there are indications that the desire for more discretionary time will lead to more residential high rises close to or in the midst of downtown office buildings Downtown living could become the desired alternative Tall buildings will be approached increasingly from the standpoint of an urban ecology that what happens to a part can influence the whole Providing for public as well as private needs in a tall building project is just one example facilities for schools shops religious and other needs More attention will be paid to maintaining streets as lively and interesting places Will a new world's tallest be built Will we go a mile high The answer is probably yes to the first no to the second With the recent spate of super tall buildings on the drawing boards going to greater heights was in the back of many people's minds at the Chicago conference But in the United States at least buildings of 70 to 80 stories would appear to provide needed space consistent with economy The future then is described in depth by papers that go into specific areas

American Urban Form Sam Bass Warner, Jr., Andrew Whittemore, 2013-08-16. An illustrated history of the American city's evolution from sparsely populated village to regional metropolis. *American Urban Form* the spaces places and boundaries that define city life has been evolving since the first settlements of colonial days. The changing patterns of houses buildings streets parks pipes and wires wharves railroads highways and airports reflect changing patterns of the social political and economic processes that shape the city. In this book Sam Bass Warner and Andrew Whittemore map more than three hundred years of the American city through the evolution of urban form. They do this by offering an illustrated history of the City a hypothetical city constructed from the histories of Boston Philadelphia and New York that exemplifies the American city's transformation from village to regional metropolis. In an engaging text accompanied by Whittemore's detailed meticulous drawings they chart the City's changes. Planning for the future of cities they remind us requires an understanding of the forces that shaped the city's past.

The Skyscraper Curse Mark Thornton, 2018-08-01. *The Skyscraper Curse* is Dr Mark Thornton's definitive work on booms and busts and it explains why only Austrian economists really understand them. It makes business cycle theory accessible to a whole new 21st century audience. And they need it especially those under 40. Many of the brilliant quants working on Wall Street and at the Fed barely remember the Crash of 2008 much less understand it. But Mark Thornton does and his book is a warning about overheated equity markets over inflated housing prices and clueless central bankers. Given the shaky stock markets lately 2018 may be the year the Fed's latest bubble bursts. And when it does it will be even more painful than 10 years ago. In fact US household and business debt is now one trillion dollars higher than 2008. Mark is well known as an expert on bubbles and Fed malfeasance. His work appears in outlets like Wall Street Journal Bloomberg Forbes The Economist Barron's and Investor's Business Daily. His now infamous Skyscraper Index theory draws the connection between loose monetary policy artificially low interest rates and vanity construction projects. Put the three together and it doesn't turn out well. And let's not forget that Dr Thornton was among only a handful of economists

to warn about the dangerous housing bubble in 2004 and again in 2006 Cabbies and waiters bought up condos with no money down in places like Las Vegas Prices rose 25 percent or more every year in some coastal markets Even people with terrible credit financed houses at five or seven times their annual income All of it was made possible by the Fed and its mania for low interest rates So when the experts said Nobody could have seen this coming the Mises Institute had Mark's articles and papers ready to go The housing crash and the meltdown in equity markets less than a year later were thoroughly explained by Austrian business cycle theory And Mark was the capable face of the Mises Institute during it all Without a lay friendly book like *The Skyscraper Curse* millions more Americans will be duped by the next crash Dr Thornton's book tells the story that needs to be told It will be among the only alternative explanations available when the next crisis comes

The Skyscraper and the City Gail Fenske, 2008-08 Once the world's tallest skyscraper the Woolworth Building is noted for its striking but incongruous synthesis of Beaux Arts architecture fanciful Gothic ornamentation and audacious steel framed engineering Here in the first history of this great urban landmark Gail Fenske argues that its design serves as a compelling lens through which to view the distinctive urban culture of Progressive era New York Fenske shows here that the building's multiplicity of meanings reflected the cultural contradictions that defined New York City's modernity For Frank Woolworth founder of the famous five and dime store chain the building served as a towering trademark for advocates of the City Beautiful movement it suggested a majestic hotel de ville for technological enthusiasts it represented the boldest of experiments in vertical construction and for tenants it provided an evocative setting for high style consumption Tourists meanwhile experienced a spectacular sightseeing destination and avant garde artists discovered a twentieth century future In emphasizing this faceted significance Fenske illuminates the process of conceiving financing and constructing skyscrapers as well as the mass phenomena of consumerism marketing news media and urban spectatorship that surround them As the representative example of the skyscraper as a cathedral of commerce the Woolworth Building remains a commanding presence in the skyline of lower Manhattan and the generously illustrated *Skyscraper and the City* is a worthy testament to its importance in American culture
