Batabyal, 2008 This book is a collection of Amitrajeet A. Batabyal's most important papers on the environment and economic development This book's uniqueness stems from the fact that it uses novel modeling tools that are largely unfamiliar to economists to shed valuable light on contemporary problems at the interface of the environment and economic development      *Shifting Cultivation in Thailand, Laos and Vietnam: Regional Overview and Policy Recommendations* Stephen Bass, Elaine Morrison, 1994      **Tropical Forests and Climate** N. Myers, 2013-06-29 Tropical forests affect climate and the removal of the forests will change climate Or not This book discusses basic questions on how far if at all tropical deforestation leads to climatic change The question of this uncertainty is particularly addressed One important consequence of the uncertainties of whether deforestation affects climate is how scientific findings best illuminate the policy making process      *Proceedings of the Session on Tropical Forestry for People of the Pacific, XVII Pacific Science Congress, May 27-28, 1991, Honolulu, Hawaii*, 1992      **The Economics and Ecology of Biodiversity Decline** Timothy M. Swanson, 1998-06-25 Essays by economists and ecologists debate the causes and consequences of biodiversity decline      Population Growth, Shifting Cultivation, and Unsustainable Agricultural Development Andrew Keck, Narendra P. Ehrlich, Anne H. Ehrlich, Gretchen C. Pearce,2023-05-26 The Causes of Tropical Deforestation 1994 is an analysis of the problem of deforestation using statistical technique a form of environ metrics to discover the true causes of an issue whose basis is hotly debated and attributed to causes as varied as poverty external debt multinational logging companies government corruption the IMF population growth and non sustainable agriculture *Tropical Forests and Their Crops* Nigel J. H. Smith,J. T. Williams,Donald L. Plucknett,Jennifer P. Talbot,2018-05-31 The tropics are the source of many of our familiar fruits vegetables oils and spice as well as such commodities as rubber and wood Moreover other tropical fruits and vegetables are being introduced into our markets to offer variety to our diet Now as tropical forests are increasingly threatened we face a double fold crisis not only the loss of the plants but also rich pools of potentially useful genes Wild populations of crop plants harbor genes that can improve the productivity and disease resistance of cultivated crops many of which are vital to developing economies and to global commerce Eight chapters of this book are devoted to a variety of tropical crops beverages fruit starch oil resins fuelwood fodder spices timber and nuts the history of their domestication their uses today and the known extent of their gene pools both domesticated and wild Drawing on broad research the authors also consider conservation strategies such as parks and reserves corporate holdings gene banks and tissue culture collections and debt for nature swaps They stress the need for a sensitive balance between conservation and the economic well being of local populations If economic growth is part of the conservation effort local populations and governments will be more strongly motivated to save their natural resources Distinctly practical and soundly informative this book provides insight into the overwhelming abundance of tropical forests an unsettling sense of what we may lose if they are destroyed and a deep appreciation for the delicate relationships between tropical forest plants and people around the world *Surveying Marbled Murrelets at Inland Forested Sites* ,1990 **Pacific Forest** Judith Bennett,2021-10-25 This book addresses the contending views of the uses of Solomon Island forest Ranging from an examination of the interaction between the first settlers and their

forest the book goes on to analyse the attitudes of the British administrators planters and missionaries The colonial government sought to protect the resource but neglected to consider the wishes of the forest s inhabitants in planning for its future economic use The independent governments failed to protect the dwindling forest on customary land in the face of accelerating demands from their own people and of Asian based logging companies while non governmental organisations and aid donors have tried to invoke a more conservative regime of forest use

**Circular Economy and Sustainable Value Creation through Eco-Innovation** Srikanta Patnaik, Leon Miller, Francesco Vigliarolo, 2025-05-28 Circular economy and sustainable value creation through eco innovation are interconnected concepts that revolve around creating a more sustainable and environmentally friendly approach to economic growth and business development In a world confronted by pressing environmental challenges the need for sustainable economic practices has never been more urgent The traditional linear economic model characterized by the take make dispose approach has led to resource depletion environmental degradation and social inequalities In response to these challenges the concepts of circular economy and eco innovation have emerged as powerful frameworks for reshaping our economic systems to prioritize sustainability The circular economy represents a paradigm shift from the linear economic model that has dominated for centuries Instead of viewing resources as finite and disposable the circular economy embraces the idea that resources can be kept in circulation for as long as possible thereby minimizing waste and environmental impact At the core of the circular economy is the efficient use of resources This entails reducing resource consumption reusing products and materials and recycling to extend the life of resources Products are designed with durability and ease of repair in mind ensuring they have a longer lifespan and can be easily maintained Circular practices aim to restore natural systems and reduce harm to the environment whether through reforestation soil regeneration or sustainable agriculture

**From Fires to Oceans: Dynamics of Fire-Derived Organic Matter in Terrestrial and Aquatic Ecosystems** Samuel Abiven, Cristina Santín, 2019-05-09 Fire derived organic matter also known as pyrogenic carbon PyC is ubiquitous on Earth It can be found in soils sediments water and air In this wide range of environments fire derived organic matter represents a key component of the organic matter pool and in many cases the largest identifiable group of organic compounds PyC is also one of the most persistent organic matter fractions in the ecosystems and its study is therefore particularly relevant for the global carbon cycle From its production during vegetation fires to its transfer into soils sediments and waters PyC goes through different transformations both abiotic and biotic Contrary to early assumptions PyC is not inert and interacts strongly with the environment evidence of microbial decomposition oxidation patterns and interactions with minerals have been described in different matrices PyC travels across these different environments and it is modified chemically and physically but remains persistent This Research Topic explores important questions in our understanding of fire derived organic matter from the characterization and quantification of PyC components to the transformation and mobilization processes taking place on terrestrial and aquatic

ecosystems The studies compiled here provide novel and often unexpected results They all answer some of the questions posed and more importantly provide scope for many more
