Meigs, 2002-06 The classic problem of when to depend on lessons learned from previous conflicts and when to employ new tactics and technology always confronts military leaders At the beginning of World War II for example Allied naval strategists were prepared to do battle using traditional tactics against surface vessels but this study contends not against submarines because the strategists failed to appreciate either the damage done by submarines in World War I or the tactics that had worked successfully against them Consequently from the beginning of World War II to mid 1943 German U boats were able to mount a devastating campaign against Allied shipping In *Slide Rules and Submarines* Montgomery Meigs describes how the allies learned to counter the U boat threat Using new technology and new tactics derived from scientific methods they devised countermeasures to defeat the German submarine menace Then continuing to apply those successful measures they went on to negate the Japanese submarine threat in the Pacific The author cites the crucial role of civilian scientists the outsiders who worked with military staffs and operational commanders of the campaign at sea Their open minds and objective methods were essential for the application of such tactical advances as sonar and radar acoustic torpedoes depth finders and code breaking to the battle As this study illustrates the importance of such timely and innovative cooperation among scientists the research and development community and military commanders in bringing technological knowledge to bear for operational and strategic advantage cannot be overstated Meigs study of how such cooperation succeeded in the crucible of wartime crisis is itself an example of how the lessons of the past can serve us well today J A Baldwin Vice Admiral United States Navy President National Defense University **World War II in Asia and the Pacific and the War's Aftermath, with General Themes** Loyd Lee, 1998-10-23 A companion to *World War II in Europe Africa and the Americas* this volume reevaluates the most enduring literature on basic aspects of the war in Asia and the Pacific It also covers themes pertaining to societies at war culture the arts and science and technology as well as international relations and the postwar world Included are not only grand strategy military and naval campaigns and matters of diplomacy but also resistance collaboration prisoners of war and broad topics of the home front including chapters on gender issues film literature popular culture and propaganda This volume and its companion provide the first comprehensive historiographic reference work on the war Each chapter describes the state of knowledge on the topic relating each bibliographic reference to the chapter s themes and issues and concludes with a bibliography Recent original scholarship is included when it aids new understanding and older works of enduring value also find a place The essays in this volume will interest scholars and college teachers as well as advanced students and serious amateurs seeking insight into the history of the war and its literature [The Oxford Encyclopedia of American](#)

Blackett's War Stephen Budiansky,2013-02-19 A Washington Post Notable Book In March 1941 after a year of devastating U boat attacks the British War Cabinet turned to an intensely private bohemian physicist named Patrick Blackett to turn the tide of the naval campaign Though he is little remembered today Blackett did as much as anyone to defeat Nazi Germany by revolutionizing the Allied anti submarine effort through the disciplined systematic implementation of simple mathematics and probability theory This is the story of how British and American civilian intellectuals helped change the nature of twentieth century warfare by convincing disbelieving military brass to trust the new field of operational research
