Rationality in Social Interactions Guido Olschewski, 2009 The analysis of human decision making in social sciences is often based on a conception of rationality This dissertation contains three microeconomic models which directly build on the rationality assumption in economic theory We model agents endowed with rational preferences and analyze how such preferences translate into decisions in a given social interaction In particular we present three different models 1 Arrovian social choice theory with delegation as a feasible policy alternative 2 Game theory and the existence of mental equilibrium in 2x2 games 3 Information economics and its application to analyzing stakeholder participation in electronic health record Health Care in America John C. Burnham, 2015-05-15 A comprehensive history of sickness health and medicine networks in America from Colonial times to the present In Health Care in America historian John C Burnham describes changes over four centuries of medicine and public health in America Beginning with seventeenth century concerns over personal and neighborhood illnesses Burnham concludes with the arrival of a new epoch in American medicine and health care at the turn of the twenty first century From the 1600s through the 1990s Americans turned to a variety of healers practices and institutions in their efforts to prevent and survive epidemics of smallpox yellow fever cholera influenza polio and AIDS Health care workers in all periods attended births and deaths and cared for people who had injuries disabilities and chronic diseases Drawing on primary sources classic scholarship and a vast body of recent literature in the history of medicine and public health Burnham finds that traditional healing care and medicine dominated the United States until the late nineteenth century when antiseptic aseptic surgery and germ theory initiated an intellectual social and technical transformation He divides the age of modern medicine into several eras physiological medicine 1910s 1930s antibiotics 1930s 1950s technology 1950s 1960s environmental medicine 1970s 1980s and beginning around 1990 genetic medicine The cumulating developments in each era led to today s radically altered doctor patient relationship and the insistent questions that swirl around the financial cost of health care Burnham's sweeping narrative makes sense of medical practice medical research and human frailties and foibles opening the door to a new understanding of our current concerns Public Health Service Publication, Towards a neuroscience of social interaction Ulrich Pfeiffer, Bert Timmermans, Kai Vogeley, Chris Frith, Leonhard Schilbach, The burgeoning field of social neuroscience has begun to illuminate the complex biological bases of human social cognitive abilities However in spite of being based on the premise of investigating the neural bases of interacting minds the majority of studies have focused on studying brains in isolation using paradigms that investigate offline

social cognition i e social cognition from a detached observer s point of view asking study participants to read out the mental states of others without being engaged in interaction with them Consequently the neural correlates of real time social interaction have remained elusive and may paradoxically represent the dark matter of social neuroscience More recently a growing number of researchers have begun to study online social cognition i e social cognition from a participant s point of view based on the assumption that there is something fundamentally different when we are actively engaged with others in real time social interaction as compared to when we merely observe them Whereas for offline social cognition interaction and feedback are merely a way of gathering data about the other person that feeds into processing algorithms inside the agent it has been proposed that in online social cognition the knowledge of the other at least in part resides in the interaction dynamics between the agents Furthermore being a participant in an ongoing interaction may entail a commitment toward being responsive created by important differences in the motivational foundations of online and offline social cognition In order to promote the development of the neuroscientific investigation of online social cognition this Frontiers Research Topic aims at bringing together contributions from researchers in social neuroscience and related fields whose work involves the study of at least two individuals and sometimes two brains rather than single individuals and brains responding to a social context Specifically this Research Topic will adopt an interdisciplinary perspective on what it is that separates online from offline social cognition and the putative differences in the recruitment of underlying processes and mechanisms Here an important focal point will be to address the various roles of social interaction in contributing to and at times constituting our awareness of other minds For this Research Topic we therefore solicit reviews original research articles opinion and method papers which address the investigation of social interaction and go beyond traditional concepts and ways of experimentation in doing so While focusing on work in the neurosciences this Research Topic also welcomes contributions in the form of behavioral studies psychophysiological investigations methodological innovations computational approaches developmental and patient studies By focusing on cutting edge research in social neuroscience and related fields this Frontiers Research Topic will create new insights concerning the neurobiology of social interaction and holds the promise of helping social **Evaluating the Organizational Impact of Health Care Information Systems** James neuroscience to really go social G. Anderson, Carolyn Aydin, 2006-04-07 Evaluating the Organizational Impact of Health Care Information Systems Second Edition is heavily updated and revised from its First Edition which is entitled Evaluating Health Care Information Systems Methods and Applications The much needed Second Edition is a guide for evaluating the organizational impacts of computer systems in health care institutions It provides a practical guide for determining the appropriate questions to ask based on underlying models of change and the most effective methods available An introduction to various methods is provided as well as appendices containing survey instruments usable in research and evaluation computer programs for data analyses and other evaluation resources The book provides a critical overview of current research and evaluation to date with numerous

bibliographic references from health care and other fields The methods and instruments described are applicable to a wide variety of other organizations that utilize information technology and they emphasize the importance of clearly specifying the purpose of the evaluation recognizing assumptions about organizational change and using a multi method approach to system evaluation The material presented is drawn from a variety of social and health science disciplines in order to integrate the study of information system with social science theory and methods Chapter highlights include Cognitive Approaches to Evaluation Computer Simulation as an Evaluation Tool and Research and Evaluation Future Directions Evaluating the Organizational Impact of Health Care Information Systems Second Edition is timely since annual investment in information technology by health care organization in the U S now exceeds 15 billion It will prove valuable to physicians nurses other health care providers health care administrators information systems personnel and consultants who are involved in planning developing implementing utilizing and evaluating computer based health care systems Information Technology in Health Care 2007 Johanna Westbrook, Johanna I. Communication and Health Eileen Berlin Ray, Lewis Donohew, 2013-11-05 This volume examines this rapidly growing and changing field by applying a unified framework that integrates both interpersonal and mass communication investigations into theoretical and applied issues Using a systems perspective as the organizational framework relevant issues in the communication of health care ranging from micro to macro levels are discussed The contributors recognize communication as a major factor affecting health today and therefore go beyond examinations of health communication as simply a dissemination of information regarding diseases diagnoses and treatments to show it as a much larger and more complex field with applications to all levels and forms of communication Communication and Health has as its three main objecties providing a comprehensive detailed and up to date picture of health communication applying an integrated logical structure to the field making a clear strong statement regarding the state of health communication and examining its future prospects The contributors address such issues as provider patient communication health care teams health care organizations public health campaigns and health education and then discuss the factors that affect the processing of health information Also included are examinations of changes in communication use within interpersonal small group and organizational health care contexts as well as the use of mass media and other sources for public health campaigns and for raising public awareness of health issues on a day to day basis Communication and Health fills a void in current literature on this field by serving as both a reference for professionals and researchers and as a textbook for advanced undergraduate and graduate level students in a multitude of courses Interprofessional Communication in Health and Social Care Stephanie Fox, Kirstie McAllum, Leena Mikkola, 2025-03-01 This is an Open Access book Interprofessional communication remains both under theorized and under researched in healthcare contexts This book aims to fill that gap by offering practitioners policy makers interprofessional

curriculum builders and students in the health professions a broadened theoretical understanding and rich empirical examples of interprofessional communication across a range of health and social care contexts Importantly this means opening the black box of what it means for interprofessional collaboration to be effective in particular for complex collective practices that rely on shared meanings and accountabilities Divided into three parts the book brings together the practical and conceptual expertise of scholars and practitioners from the fields of communication interprofessional education health and human sciences and healthcare management The Making and Breaking of Minds: How social interactions shape the human mind Isabella Sarto-Jackson, 2022-04-05 The human brain has a truly remarkable capacity It reorganizes itself flexibly adjusting to fluctuating environmental conditions a process called neuroplasticity Neuroplasticity provides the basis for wide ranging learning and memory processes that are particularly profuse during childhood and adolescence At the same time the exceptional malleability of the developing brain leaves it highly vulnerable to negative impact from the surroundings Abusive or neglecting social environments as well as socioeconomic deprivation and poverty cause toxic stress and complex traumas that can severely compromise cognitive development emotional processing self perception and executive brain functions The neurophysiological changes entailed impair emotional regulation lead to heightened anxiety and afflict attachment and the formation of social bonds Neuroplastic changes following severely adverse experiences are not something that a person grows out of and gets over These experiences alter the neurobiological and biochemical makeup and cause people to live in an emotionally relabeled world in which the evaluation of any social cue their behavior cognition and state of mind are biased towards the negative Even more worrying detrimental neurophysiological consequences are not limited to the traumatized individual but are often transmitted to subsequent generations through a process of social niche construction thereby creating a vicious cycle Thus the making and breaking forces of the brain are epitomized by parents alloparents peers and our socioeconomic niche This book expounds on the formative role that the social environment plays in healthy brain development especially during infancy childhood and adolescence Based on scientific findings the book advocates for bold measures and responsible stewardship to combat child abuse maltreatment and child poverty By bringing together insights from neuroscience evolutionary biology and social education work it lays out a fact based transdisciplinary endeavor that aims at rising to the societal challenge of providing a rewarding perspective to youth at risk It will be a valuable resource for academics from social education pedagogy cognitive science neuroscience as well as professionals in the fields of social work pedagogy education child welfare Sparks and Taylor's Nursing Diagnosis Reference Manual Sheila S.
