**CHILD PSYCHOTHERAPY** Andreas Sofroniou,2015-10-06 In reading this book on Child Psychotherapy the reader must take into consideration the influences attributed to childhood Childhood is after all a very influential phase in the human life cycle which stretches roughly from infancy to puberty or to the legal age of majority Because children can be distinguished from adults by certain biological and cognitive characteristics childhood is perceived as separate from adulthood and the transition is normally accompanied by a significant change in social and legal status and marked by rites of passage and initiation The social significance experience and duration of childhood are extremely variable both historically and geographically For example before the 20th century children in Europe generally worked alongside their extended family in factory field or mine In many developing countries children still work alongside their parents marry and have children at an age when their coevals elsewhere are required to remain in school Handbook of Research in Pediatric and Clinical Child Psychology Dennis Drotar,2013-11-11 The professional development of researchers is critical for the future development of the fields of pediatric and clinical child psychology In order to conduct research in pediatric and clinical child psychology researchers need to work with a wide range of populations and master an increasingly wide range of skills many of which are either not formally taught or considered in sufficient depth in clinical training Such skills include the development of resources for research by writing grants to government agencies and foundations skills in preparing research for publications concerning original research review articles or case reports scientific presentation skills the ability to review and edit scientific manuscripts and to implement and manage research in applied settings Moreover the increasing complexity of research in pediatric and clinical child psychology requires successful researchers in these fields to develop their expertise with a wide range of new specialized methodologies data analytic methods models of data analysis and methods of assessment Finally to enhance the relevance of their research to practice researchers in pediatric and clinical child psychology need to integrate their work with clinical service delivery programs that are based on empirical research The necessity to train researchers in pediatric and clinical child psychology in such multifaceted knowledge and skills places extraordinary burdens on professional training programs Professional researchers in pediatric and clinical child psychology also are challenged to develop new knowledge and skills through continuing education and faculty development programs
