*Social Organization of Animal Communities* Association for the Study of Animal Behaviour, Zoological Society of London. Symposia, Peggy Edith Ellis, 1965      *Cubeo Hehñewa Religious Thought* Irving Goldman, 2004 The societies of Vaupes region are among the most documented indigenous cultures in part because they are thought to resemble earlier civilizations lost during initial colonial conflict and students and scholars are eagerly awaiting the publication of this posthumous work by the man widely regarded as the preeminent authority on Vaupes Amazonian societies This definitive account of the religion of a significant Amazonian culture was substantially completed before Irving Goldman's death but Peter Wilson has edited it for publication providing an introduction to Goldman's work      **Geographical Sociology** Jeremy R. Porter, Frank M. Howell, 2012-02-27 The discipline of Sociology has a rich history of including spatial context in the analysis of social issues Much of this history has revolved around the development and application of spatial theory aimed at understanding the geographic distribution of social problems the organization of communities and the relationship between society and the environment More recently the social sciences have seen a large number of technological innovations that now make it possible to place social behaviour in spatial context Consequently because of the historical disjuncture in the development of spatial theory and the recent development of relevant methodological tools the relationship between materials describing both the methodological approaches and their theoretical importance a scattered throughout various books and articles Geographical Sociology consolidates these materials into a single accessible source in which spatial concepts such as containment proximity adjacency and others are examined in relation to such methodological tools as hierarchical linear models point pattern analysis and spatial regression As these methods continue to increase in popularity among social scientists the ability to more generally understand societies relationship to geographic space will continue to increase in its importance in the field This book represents a starting point to linking these concepts to practice and is presented in an accessible form in which students researchers and educators can all learn and in turn contribute to its development

Mellars, 2015-07-28 The Neanderthals populated western Europe from nearly 250 000 to 30 000 years ago when they disappeared from the archaeological record In turn populations of anatomically modern humans *Homo sapiens* came to dominate the area Seeking to understand the nature of

this replacement which has become a hotly debated issue Paul Mellars brings together an unprecedented amount of information on the behavior of Neanderthals His comprehensive overview ranges from the evidence of tool manufacture and related patterns of lithic technology through the issues of subsistence and settlement patterns to the more controversial evidence for social organization cognition and intelligence Mellars argues that previous attempts to characterize Neanderthal behavior as either modern or ape like are both overstatements We can better comprehend the replacement of Neanderthals he maintains by concentrating on the social and demographic structure of Neanderthal populations and on their specific adaptations to the harsh ecological conditions of the last glaciation Mellars s approach to these issues is grounded firmly in his archaeological evidence He illustrates the implications of these findings by drawing from the methods of comparative socioecology primate studies and Pleistocene paleoecology The book provides a detailed review of the climatic and environmental background to Neanderthal occupation in Europe and of the currently topical issues of the behavioral and biological transition from Neanderthal to fully modern populations
