The Biological Foundations of Socialism

As the political climate in the US progresses towards the 2020 election the question of socialism is ever more prevalent. Despite all the talk about freedom, the American people have never had the opportunity to choose between socialism and capitalism, not unlike countries with a single party, like say China, where there may be elections, but their citizens do not have plurality of choices of parties and candidates. In a similar way, the US citizens have never had any the opportunity to choose something other than capitalism. In the US past elections there has never been plurality or diversity of choices in terms of the economic system from which citizen may choose. In 2016 the one candidate that mentioned the word socialism was blacklisted and all the powers that be did what they needed to do to prevent him from being the Democratic nominee, and thus prevented the American people from having that choice.

The debate about socialism or capitalism, or some other third way, is rich and complex and there is little chance it will get a good revision and scrutiny in the US mainstream media. Even when the debate between is properly addressed, the debate focuses on economic, social and political issues. While these are necessary points of the discussion, I think the issues pertaining human nature have been ignored, or mis interpreted. Is there an economic system that best fits human nature? Or the opposite question: Is there an economic model that is incompatible with the very essence of humankind? What does our knowledge of the human species and other socio-biological systems tell us which system is more appropriate, if any? Perhaps there is no absolute answer to these questions, but these issues are highly relevant if we want to build a new political and economic system that does not bring conflict with human nature. While the decision of what system we live under is ultimately a sovereign decision of humankind it will be helpful to understand better our instinctive tendencies.

Some positions have argued that socialism is incompatible with human nature because of the inherent selfishness of our species but the issue has not been responsibly analyzed under current evolutionary theory. Often competition is presented as the only rule dictating natural selection, when in actuality evolutionary systems are far more complex. In this essay I explore what Capitalism and Socialism mean and try to reconcile both concepts with our current understanding of human nature under the light of current

Excerpt from *Socialism A Critical Analysis* Socialism is the first place an indictment of any and all industrial systems based on private property and competition. The indictment is urged hotly and with unsparing detail in ponderous treatise and eeting pamphlet through party organs and on party platforms. Day after day and week after week vigorously edited journals keep up a running fire on every weak spot of capitalism. Night after night on countless street corners soap box orators condemn the existing order root and branch. It is judged by its fruits and its fruits are charged to be waste and wretchedness and want. All is for the worst in this worst of possible worlds. Private property and devil take the hindmost have failed utterly to provide an abiding foundation for the social structure. SOCIALISM Oscar D. (Oscar Douglas) 1878 Skelton,2016-08-29

Eco-Socialism or Eco-Capitalism? Saral Sarkar,1999-05-01 This major synoptic work explores some of the most important questions facing humanity in the coming generations It is remarkable for its author s holistic treatment of the environment and social justice as inescapably related questions his refusal to analyze the industrialized and developing countries as though they are so different that any understanding of the one can ignore the other and his integrity in exploring difficult and controversial questions from a stance that always addresses the evidence even if that leads to conclusions that are not currently fashionable Saral Sarkar argues that the USSR bumped up against environmentally defined and resource related limits to growth at a relatively early stage But this does not mean that a free market globalized capitalist economy will indefinitely escape a similar fate Nor will a modified eco capitalism as promoted by some sections of the Western environmental movement provide a sufficiently grounded solution to the twin problems of environmental destruction and social injustice The author looks therefore to a fundamentally different future one in which our very notion of progress is differently conceived

Principles of Economics Frank William Taussig, 2013-01-01 Economics is more than simply the cost of a gallon of milk. Economics is also the science of society, the basis upon which a civilization functions at its most basic level. Productivity, commerce, and value are all essential elements that define and affect a community deeply. Eminent economist Frank W. Taussig brings the complex and sometimes intimidating subject to light in *Principles of Economics*, first published in 1911. By writing for the specialist as well as those with a simple educated curiosity about economics and its relevance to every member of a community, Volume II focuses on the distribution of wealth, wages, problems in economics, and taxes. Volume I covers labor, production, banking, and trade. By sacrificing no scholarship while ensuring the subjects are accessible, Taussig presents an invaluable treatise on the science of society. American economist FRANK WILLIAM TAUSSIG (1859-1940) was professor of political economy at Harvard University, longtime editor of the *Quarterly Journal of Economics*, and an advisor to U.S. president Woodrow Wilson during World War I. He is also the author of *Elements of Political Economy* (1884), *The Tariff History of the United States* (1888), and *International Trade* (1927).
