Reflections on a Politically Skeptical Era Dennis

Wrong, 2019-01-22 All of the essays included in the present volume were written between 1995 and 2001 This attests to the timeliness and relevance of Dennis H Wrong's writings He notes that the mid twentieth century disposition to believe that politics fundamentally consisted of clashes between totalistic worldviews such as communism socialism capitalism fascism nationalism internationalism and a cluster of isms may have been historically transitional But politics now appears more nuanced if no less troubled following the collapse of the Soviet bloc between 1989 and 1991 Multiculturalism and identity politics as well as communitarianism flourished in the 1990s The volume is divided into five parts Capitalism Inequalities and Alternatives Multiculturalism and Identity Politics Communitarianism Theory and Theorists and Autobiographical Reminiscences This concluding part indicates how Wrong's work includes self reflections as well as reflections an examination of how figures such as C Wright Mills and Raymond Aron Amitai Etzioni and Digby Baltzell played a role in shaping his own thought and how these changed over the course of the past century This is the third collection of the essays and articles of Dennis H Wrong published by Transaction As was the case with his earlier volumes *Reflections on a Politically Skeptical Era* is characterized by a deep attention to the actual social history of our times and how this plays out in academic pursuits especially within sociology Whether the works were published in academic journals or more popular media they reflect a quality of literary manners that is rare among social science writings but a reflection that never sacrifices a sense of principle and probity in the process

Social Stratification James Littlejohn, 2021-10-17 Originally published in 1972 this book aimed to provide the student with a basic understanding of the main theories of social stratification and to acquaint them with current methods of research with the results from modern research with emphasis on British research and with current issues in this field The first two chapters are concerned with theory and are followed by chapters on slavery and the caste system These are intended to illustrate concepts and theory and to offer the student a comparative perspective in which to view stratification in modern society which is dealt with in a final lengthy chapter The book has been written primarily for first year university students but also with sixth formers and students in colleges of further education in mind

Handbook of Sociological Theory Jonathan H. Turner, 2006-05-17 Sociology is experiencing what can only be described as hyperdifferentiation of theories there are now many approaches competing for attention in the intellectual arena From this perspective we should see a weeding out of theories to a small number but this is not likely to occur because each of the many theoretical perspectives has a resource base of adherents As a result theories in sociology do not compete head on with each other as much as they coexist This seminal reference work was brought together with an eye to capturing the diversity of theoretical activity in sociology specifically the forefront of theory Contributors describe what they themselves are doing right now rather than what others have done in the past The goal of this volume is to allow prominent theorists working in a

variety of traditions who wouldn't usually come together to review their work. The chapters in this volume represent a mix of theoretical orientations and strategies but these theories are diverse and represent the prominent theoretical discussions in sociology today. Some areas included are Section I Theoretical Methodologies and Strategies, Section II The Cultural Turn in Sociological Theorizing, Section III Theorizing Interaction Processes, Section IV Theorizing from the Systemic and Macrolevel, Section V New Directions in Evolutionary Theorizing, Section VI Theorizing on Power Conflict and Change, Section VII Theorizing from Assumptions of Rationality. This handbook will be of interest to those wanting a broad spectrum and overview of late 20th early 21st century sociological theory. **A Theory of Social Interaction** Jonathan H.

Turner, 1988. In developing the most comprehensive theory of social interaction among humans to date, the author has also constructed a general theory of micro dynamics for sociology and social psychology. He does so by reviewing existing theories of the past and present, synthesizing these concepts into abstract models and principles of social interaction. In contrast to Talcott Parsons and many others, the book argues that social interaction rather than action and behaviour is sociology's most basic unit of analysis. This unit is conceptualized as involving three processes: 1. motivational or the process of mobilizing and energizing interactive behaviour; 2. interactional or the process of mutual signaling and interpreting with symbols; and 3. structuring or the process of repeating and organizing social interactions in time and place. For each of these three constituent processes, the relevant theories are analyzed and then synthesized into composite models and general laws.

On the Origins of Human Emotions Jonathan Turner, 2000-06-01. Language and culture are often seen as unique characteristics of human beings. In this book, the author argues that our ability to use a wide array of emotions evolved long before spoken language and in fact constituted a preadaptation for the speech and culture that developed among later hominids. Long before humans could speak with words, they communicated through body language, their emotional dispositions, and it is the neurological wiring of the brain for these emotional languages that represented the key evolutionary breakthrough for our species. How did natural selection work on the basic ape anatomy and neuroanatomy to create the hominid line? The author suggests that what distinguished our ancestors from other apes was the development of an increased capacity for sociality and organization, crucial for survival on the African savanna. All apes display a propensity for weak ties, individualism, mobility, and autonomy that was and is today useful in arboreal and woodland habitats but served them poorly when our ancestors began to move onto the African plain during the late Miocene. The challenge for natural selection was to enhance traits in the species that would foster the social ties necessary for survival in the new environment. The author suggests that the result was a development of certain areas of the primate brain that encouraged strong emotional ties, allowing our ancestors to build higher levels of social solidarity. Our basic neurological wiring continues to reflect this adaptive development. From a sociological perspective that is informed by evolutionary biology, primatology, and neurology, the book examines the current neurological bases of our emotional repertoire and their implications for our social
