**Society and Its Environment** Egbert Tellegen, Maarten Wolsink, 2014-01-02 First Published in 1998 People cannot live without changing nature They do so by breathing feeding and defecating by dressing and heating and by creating barriers against wind and water cold and heat These forms of human induced change of nature have been present since the dawn of mankind People are constantly confronted by a malignant nature against which they have to defend themselves and whose resources they have to use in order to survive However the relationship between man and nature has dramatically changed during the past centuries More than the word nature the term environment has become strongly associated with damage and decay caused by human beings Hence in practice environment is mostly associated with problems In this book the term environment does not describe different environments and the way they are changed by human activities in general but focuses on those human induced of it What are the causes of these changes when and where are these changes considered as environmental problems and how do people react to these changes are the main questions of this book One of the possible reactions to environmental problems is the efforts to solve them The ways in which individual citizens private enterprises public authorities environmental organizations and others try to solve environmental problems is a main topic of this book

*Science, Society and the Environment* Michael Dove, Daniel Kammen, 2015-04-24 In an era when pressing environmental problems make collaboration across the divide between sciences and arts and humanities essential this book presents the results of a collaborative analysis by an anthropologist and a physicist of four key junctures between science society and environment The first focuses on the systemic bias in science in favour of studying esoteric subjects as distinct from the mundane subjects of everyday life the second is a study of the fire climax grasslands of Southeast Asia especially those dominated by *Imperata cylindrica* sword grass the third reworks the idea of moral economy applying it to relations between environment and society and the fourth focuses on the evolution of the global discourse of the culpability and responsibility of climate change The volume concludes with the insights of an interdisciplinary perspective for the natural and social science of sustainability It argues that failures of conservation and development must be viewed systemically and that mundane topics are no less complex than the more esoteric subjects of science The book addresses a current blind spot within the academic research community to focusing attention on the seemingly common and mundane beliefs and practices that ultimately play the central role in the human interaction with the environment This book will benefit students and scholars from a number of different academic disciplines including conservation and environment studies development studies studies of global environmental change anthropology geography sociology politics and science and technology studies
