Sociocybernetics Volume 2:

Sociocybernetics Rudolf F. Geyer, Johannes van der Zouwen, 2001-01-30 In an effort to shed light on recent developments in sociocybernetic research this volume represents recent and advanced thinking in this rapidly developing field The authors address the core problems in social science caused by increasing societal complexity and analyze the inadequacy of many of the methodological tools still used for grappling with nonlinear self organizing systems Together the 18 contributors propose elements of a new methodology based on sociocybernetic principles aimed at describing and explaining the growth of societal complexity the contribution of autopoiesis of societal subunits to more societal complexity and the new simulation based methodology needed to observe complex social systems This unique volume contributes to a greater understanding of sociocybernetics and its uses as a method for researching modern problems of increasing complexity and interdependence The first part of the book deals with increasing societal complexity and contains chapters on its overall development the complexity of brain environment interaction loops organizational change the development of human values and the increasing interpenetration of societal subsystems The second part concentrates on a current issue in sociocybernetics autopoiesis or self production The chapters included in Part II concentrate on embodied cognition on the applicability of autopoiesis to business firms on its roots in Aristotelian philosophy and on the possibility of societal control and steering in democratic societies Part III more focused on methodology discusses the difficulties inherent in observing complex social systems The chapters deal with the problems of cross cultural comparative research simulation of the evolution of social systems longitudinal simulation of education systems and the methodological difficulties associated with analyzing the unexpected complexities of mutually interacting nonlinear systems

Sociocybernetics R.F. Geyer, J. van der Zouwen, 2012-12-06 The fifteen papers comprising this book were chosen out of the sixty one contributions to the Symposium and Section on Social Systems held in the context of the Fourth International Congress of Cybernetics and Systems Amsterdam The Netherlands 21-25 August 1978 These papers assembled here on the basis of their topicality depth and originality cover a wide range of problems ranging from Societies and Turing machines to Dialectics and catastrophe An interesting array of themes is considered by authors from six countries It is felt that these papers some of them thought provoking and of great merit will cast new light on social problems Though the contributions consider a wide variety of topics the underlying trend is apparent in many instances Of special value is the discussion of the relevance of cybernetics and systems to a wide spectrum of social problems I think the treatment and the approach adopted by the contributors merit wide attention since their contributions constitute an appreciable advance in a fairly novel field

A Theory of Immediate

Awareness M. Estep, 2013-06-29 This book is multi and interdisciplinary in both scope and content It draws upon philosophy the neurosciences psychology computer science and engineering in efforts to resolve fundamental issues about the nature of immediate awareness Approximately the first half of the book is addressed to historical approaches to the question whether or not there is such a thing as immediate awareness and if so what it might be This involves reviewing arguments that one way or another have been offered as answers to the question or ways of avoiding it It also includes detailed discussions of some complex questions about the part immediate awareness plays in our over all natural intelligence The second half of the book addresses intricate and complex issues involved in the computability of immediate awareness as it is found in simple ordinary things human beings know how to do as well as in some highly extraordinary things some know how to do Over the past 2 500 years human culture has discovered created and built very powerful tools for recognizing classifying and utilizing patterns found in the natural world The most powerful of those tools is mathematics the language of nature The natural phenomenon of human knowing of natural intelligence generally is a very richly textured set of patterns that are highly complex dynamic self organizing and adaptive Models of Bounded Rationality: Empirically grounded economic reason Herbert Alexander Simon, 1997 Offering alternative models based on such concepts as satisficing acceptance of viable choices that may not be the undiscoverable optimum and bounded rationality the limited extent to which rational calculation can direct human behaviour Simon shows why more empirical research based on experiments and direct observation rather than just statistical analysis of economic aggregates is needed ICoRD'15 – Research into Design Across Boundaries Volume 2 Amaresh Chakrabarti, 2014-12-23 This book showcases over 60 cutting edge research papers from the 5th International Conference on Research into Design the largest in India in this area written by eminent researchers from across the world on design process technologies methods and tools and their impact on innovation for supporting design across boundaries The special features of the book are the variety of insights into the product and system innovation process and the host of methods and tools from all major areas of design research for the enhancement of the innovation process The main benefit of the book for researchers in various areas of design and innovation are access to the latest quality research in this area with the largest collection of research from India For practitioners and educators it is exposure to an empirically validated suite of theories models methods and tools that can be taught and practiced for design led innovation *Media Convergence Handbook - Vol. 2* Artur Lugmayr, Cinzia Dal Zotto, 2016-05-11 The Media Convergence Handbook sheds new light on the complexity of media convergence and the related business challenges Approaching the topic from a managerial technological as well as end consumer perspective it acts as a reference book and educational resource in the field Media convergence at business level may imply transforming business models and using multiplatform content production and distribution tools However it is shown that the implementation of convergence strategies can only succeed when expectations and aspirations of every actor involved are taken into account Media consumers content producers and managers face

different challenges in the process of media convergence Volume II of the Media Convergence Handbook tackles these challenges by discussing media business models production and users experience and perspectives from a technological convergence viewpoint

The Rush to Policy Peter William House, Roger Roger Don Shull, Rush to Policy explores the appropriate role of technical analysis in policy formulation The authors ask when and how the use of sophisticated analytic techniques in decision making benefits the nation They argues that these techniques are too often used in situations where they may not be needed or understood by the decision maker where they may not be to answer the questions raised but are nonetheless required by law House and Shull provide an excellent empirical base for describing the impact of politics on policies policy analysis and policy analysts They examine cost benefit analysis risk analysis and decision analysis and assess their ability to substitute for the current decision making process in the public sector They examine the political basis of public sector decision making how individuals and organizations make decisions and the ways decisions are made in the federal sector Also they discuss the mandate to use these methods in the policy formulation process The book is written by two practicing federal policy analysts who in a decade of service as policy researchers developed sophisticated quantitative analytic and decision making techniques They then spent several years trying to use them in the real world Success and failures are described in illuminating detail providing insight not commonly found in such critiques The authors delineate the interaction of politics and technical issues Their book describes policy analysis as it is not how it ought to be Peter W House is the director of policy research and analysis at the National Science Foundation He is the author of ten books on multidisciplinary science and technology policy research and analyses in government private and university sectors including The Art of Public Policy Analysis and with Roger D Shull Regulatory Reform Politics and the Environment and Regulations and Science Management of Research on Demand Roger D Shull is a senior analyst at the Division of Policy Research and Analysis National Science Foundation

Systems Science and Cybernetics - Volume II Francisco Parra-Luna, 2009-10-30 The subject Systems sciences and cybernetics is the outcome of the convergence of a number of trends in a larger current of thought devoted to the growing complexity of primarily social objects and arising in response to the need for globalized treatment of such objects This has been magnified by the proliferation and publication of all manner of quantitative scientific data on such objects advances in the theories on their inter relations the enormous computational capacity provided by IT hardware and software and the critical revisiting of subject object interaction not to mention the urgent need to control the efficiency of complex systems where efficiency is understood to mean the ability to

find a solution to many social problems including those posed on a planetary scale The result has been the forging of a new academically consolidated scientific trend going by the name of Systems Theory and Cybernetics with a comprehensive multi disciplinary focus and therefore apt for understanding realities still regarded to be inescapably chaotic This subject entry is subdivided into four sections The first an introduction to systemic theories addresses the historic development of the most commonly used systemic approaches from new concepts such as the so called geometry of thinking or the systemic treatment of non systemic identities to the taxonomic entropic axiological and ethical problems deriving from a general systemic cybernetic conceit Hence the focus in this section is on the historic and philosophical aspects of the subject Moreover it may be asserted today that beyond a shadow of a doubt problems in particular problems deriving from human interaction but in general any problem regardless of its nature must be posed from a systemic perspective for otherwise the obstacles to their solution are insurmountable Reaching such a perspective requires taking at least the following well known steps a statement of the problem from the determinant variables or phenomena b adoption of theoretical models showing the interrelationships among such variables c use of the maximum amount of wherever possible quantitative information available on each d placement of the set of variables in an environment that inevitably pre determines the problem That epistemology would explain the substantial development of the systemic cybernetic approach in recent decades The articles in the second section deal in particular with the different methodological approaches developed when confronting real problems from issues that affect humanity as a whole to minor but specific questions arising in human organizations Certain sub themes are discussed by the various authors always from a didactic vantage including problem discovery and diagnosis and development of the respective critical theory the design of ad hoc strategies and methodologies the implementation of both qualitative soft system methodologies and formal and quantitative such as the General System Problem Solver or the axiological operational perspective approaches cross disciplinary integration and suitable methods for broaching psychological cultural and socio political dynamisms The third section is devoted to cybernetics in the present dual meaning of the term on the one hand control of the effectiveness of communication and actions and on the other the processes of self production of knowledge through reflection and the relationship between the observing subject and the observed object when the latter is also observer and the former observed Known as second order cybernetics this provides an avenue for rethinking the validity of knowledge such as for instance when viewed through what is known as bipolar feedback processes through which interactions create novelty complexity and diversity Finally the fourth section centres around artificial and computational intelligence addressing sub themes such as neural networks the simulated annealing that ranges from statistical thermodynamics to combinatory problem solving such as in the explanation of the role of adaptive systems or when discussing the relationship between biological and computational intelligence Social Engineering Adam Podgorecki, John Alexander, Rob Shields, 1996-01-15 Social Engineering is a landmark attempt to develop both theory and a paradigm for

planned social action In this collection of articles Podg recki s work is a linchpin for debate among social policy practitioners and theorists from Europe and North America Their studies span a wide spectrum Nixon and the Watergate scandal Jaruzelski s Martial Law in Poland Soviet myth building the Canadian anti smoking campaign earthquake planning native land claims infoglut and self fulfilling prophecy Yet these diverse analyses clearly support and enhance one another along carefully defined themes of guided social action Social Engineering is an important addition to the shelves of public policy libraries and will be as illuminating to governments corporations policy consultants and special interest groups as it is to theorists

Self-Organizing Natural Intelligence Myrna Estep, 2006-12-26 Self Organizing Natural Intelligence brings new scientific methods to intelligence research that is currently under the influence of largely classical 19th century single causal theory and method This out dated classical approach has resulted in the single capacity g theory a central processor top down genetically determined linguistic view of intelligence that is directly contradicted by empirical facts of human and animal studies of intelligence This book proposes utilizes and demonstrates the research superiority of a highly developed multidisciplinary theory models approach to intelligence With conceptual tools concepts and mathematical methods more suited to continuous dynamic phenomena of living things the entire scope of natural intelligence based upon empirical studies of actual human and animal experience is addressed Results show that human and animal intelligence is largely self organizing and emergent across a spectrum of major categories of kinds of natural intelligence not limited to a single top down capacity as current proponents of the single capacity g theory and IQ approach support Contrary to the single capacity verbal theory of intelligence this work argues and shows evidence for three major categories of natural intelligence Overwhelming empirical evidence is given to show that our understanding of cognition itself must be broadened to include nonverbal immediate awareness as a category of natural intelligence that is embedded within sensory and somatosensory motor processes that make possible yet another category of intelligence knowing how While most current theories of intelligence assume that the mind is entirely computational and also assume that sensation is cognitively neutral having no intentionality here empirical evidence is presented from numerous clinical studies showing that certain primitive sensory processes are not cognitively neutral nor do they require a representational language interface in order to be accessible to cognitive intelligence processes This volume describes a rigorous treatment and exhaustive classification of natural intelligence while also demonstrating a more adequate scientific and mathematical approach than current statistical and psychometric approaches shoring up the out dated and misused IQ hypothetical construct

Policymaking Under Adversity Yehezkel Dror, 2017-09-29 This groundbreaking study systematically treats recent policymaking trends starting with a reconsideration of salient theoretical issues of policymaking and its study and culminating with a survey of current policy related predicaments in various countries Dror proposes that the task for social science research is to uncover underlying causes of policymaking inadequacies Standard research methods Dror states have been unable to uncover the realities of important decisions made inside governments In order to gain an understanding of pressing predicaments he believes that policymakers need to examine the foundations of contemporary practices of present assumptions and that they need a multiplicity of approaches to policymaking After prescribing a set of requirements that policymaking must satisfy in order to adequately respond to challenges Dror posits several improvements needed in education and in policy decision making The book concludes with an extensive bibliography including numerous important German works not found in other English language studies This book supplements the earlier basic theory and models propounded in Dror's Public Policymaking Reexamined by dealing with current trends As a guide to public policy literature and related works it will be invaluable to students and practitioners

Self-steering and Cognition in Complex Systems Francis Heylighen, Eric Rosseel, Frank Demeyere, 1990 In the on going philosophical debate between cognitivism and radical constructivism the pervading notions of self reference self organization self steering autonomy etc are at the forefront of discussion These multidisciplinary papers from a symposium on title held in May 1987 examine these topics in depth and illustrate their applications Taken as a whole they provide insight into the emergence of a new cybernetics Book club price 34 Annotation copyrighted by Book News Inc Portland OR

Agile Project Management and Complexity Czesław Mesjasz, Katarzyna Bartusik, Tomasz Małkus, Mariusz Sołtysik, 2022-04-06 This research monograph presents an inter disciplinary study of the impact and current status of applications of complexity related concepts in the early stages of development of Agile Project Management APM The results serve as an introduction for exploring more profound relations between complexity related ideas and APM in the future The increasing complexity of software projects and their environment in the 1990s constituted the main determinants of the development of the family of methodological frameworks called Agile Project Management Development of APM has been shaped by a broadly defined area of research called complexity science or complexity theory based on complex adaptive systems CAS and on their characteristics Complexity chaos the edge of chaos emerging properties non linearity self organization etc In the 21st century due to the expansion of Agile beyond software development the challenges deriving from the complexity of projects and the environment are even more urgent or compelling Such phenomena demand more profound inter and multi disciplinary studies This book examines the impact of applications of complexity related ideas deriving from intuitive complexity and from complexity science in the early stages of development of the Agile methodological frameworks in project management and considers the current status of those applications It questions the usefulness of those applications for the practice and theory of APM and then proposes a conceptual framework for further theoretical studies and several ways of improvement and refinement of the Agile Project Management necessary to deal with broadly defined complexity in project management Requiring a medium level knowledge of complexity studies and knowledge of project management this book is written for the research community studying the links between the various methodological frameworks included in APM and complexity related ideas It will also be interesting for studies of the impact of complexity on modern management and for master s students on IT and management courses

Bailey, 1994-01-11 This book provides current information about the many recent contributions of social systems theory While some sociologists feel that the systems age ended with functionalism in reality a number of recent developments have occurred within the field The author makes these developments accessible to sociologists and other non systems scholars and begins a synthesis of the burgeoning systems field and mainstream sociological theory The analysis shows not only that important points of rapprochement exist between systems theory and sociological theory but also that

systems theory has in some cases anticipated developments needed in mainstream theory **Systems, Cybernetics and Innovations** Matjaž Mulej, 2006 This e book is a compilation of selected papers on the theme of Systems cybernetics and innovation from the 13th International Congress of the World Organization of Systems and Cybernetics WOSC Slovenia July 2005 and is guest edited by Professor Matjaz Mulej University of Maribor The articles present research and development in a number of areas Artificial Natural Dualism Economic Systems Education Systems Engineering and Information Systems Grey Systems Management Systems Mathematical Systems Nature Systems Tourism Cybernetics Viable Organizations and World Education Syste *Observing News and Media in a Complex Society* Toru Takahashi, 2023-12-11 Exploring the conditions of news reporting in today's information flooded society *Observing News and Media in a Complex Society* looks into the strands of systems theoretical studies of the mass media journalism and the empirical studies of inter media agenda setting Journalism is increasingly exposed to diverse perception and facing its selectivity observed by the public Considering this context this book focuses on the movement of solution oriented journalism which seeks a new way to answer the question what is journalism for and invites us to expand our understanding of media's societal role in the societal process of problem solving and meaning construction
