Songbirds of Europe Henk van den Brink,1997 David S. Wilcove,2007-11 Animal migration is a magnificent sight a mile long blanket of cranes rising from a Nebraska river and filling the sky hundreds of thousands of wildebeests marching across the Serengeti a blaze of orange as millions of monarch butterflies spread their wings to take flight Nature s great migrations have captivated countless spectators none more so than premier ecologist David S Wilcove In *No Way Home* his awe is palpable as are the growing threats to migratory animals We may be witnessing a dying phenomenon among many species Migration has always been arduous but today s travelers face unprecedented dangers Skyscrapers and cell towers lure birds and bats to untimely deaths fences and farms block herds of antelope salmon are caught en route between ocean

and river breeding and wintering grounds are paved over or plowed and global warming disrupts the synchronized schedules of predators and prey. The result is a dramatic decline in the number of migrants. Wilcove guides us on their treacherous journeys describing the barriers to migration and exploring what compels animals to keep on trekking. He also brings to life the adventures of scientists who study migrants. Often as bold as their subjects, researchers speed wildly along deserted roads to track birds soaring overhead, explore glaciers in search of frozen locusts and outfit dragonflies with transmitters weighing less than one one hundredth of an ounce. Scientific discoveries and advanced technologies are helping us to understand migrations better but alone they won't stop sea turtles and songbirds from going the way of the bison or passenger pigeon. What's required is the commitment and cooperation of the far flung countries migrants cross long before extinction is a threat. As Wilcove writes, protecting the abundance of migration is key to protecting the glory of migration. *No Way Home* offers powerful inspiration to preserve those glorious journeys. *No Way Home* David S. Wilcove, 2010-08-30

A leading wildlife biologist shows how human activity is not just erasing species and ecosystems but also cutting the ancient natural highways that make possible Earth's greatest wildlife spectacles. **The Cuckoos** Robert B. Payne, 2005-07-14

The cuckoos are the most variable birds in social behavior and parental care; a few cuckoos are among the most social of all birds and rear their young in a common nest; most cuckoos are caring parents that rear their own young with some females laying a few eggs in the nests of others while many cuckoo species are brood parasites who leave their eggs in the nests of other birds to rear with their young maturing to kill their foster nestmates. In *The Cuckoos* Robert B. Payne presents a new evolutionary history of the family based on molecular genetics and uses the family tree to explore the origins and diversity of their behaviour. He traces details of the cuckoos' biology to their original sources, includes descriptions of previously unpublished field observations and reveals new comparisons of songs showing previously overlooked cuckoo species. Lavishly illustrated with specially commissioned colour plates and numerous maps, halftones and line drawings, *The Cuckoos* provides the most comprehensive and up to date account of this family yet available. **Wildlife Criminology** Nurse, Angus, Wyatt, Tanya, 2021-10-13

The concept of wildlife criminology reaches new boundaries in this illuminating new study of exploitation of animals and its social implications. Reviewing harms like exploitation and trade, blood sports and wildlife as food, it considers the rights of animals as sentient beings and the impact of crimes on inter human attitudes and violence. **Europe** Tim Flannery, 2019-02-12

A tale of cave bears and comet strikes and a hundred million years of history by the bestselling author of *Here on Earth*. *Marvelous Publishers Weekly* starred review. In *Europe*, a natural history world renowned scientist, explorer and conservationist Tim Flannery applies the eloquent interdisciplinary approach he used in his ecological histories of Australia and North America to the story of Europe. He begins 100 million years ago when the continents of Asia, North America and Africa interacted to create an island archipelago that would later become the Europe we know today. It was on these ancient tropical lands that the first distinctly European organisms evolved. Flannery teaches us about Europe's midwife

toad which has endured since the continent's beginning while elephants crocodiles and giant sharks have come and gone He explores the monumental changes wrought by the devastating comet strike and shows how rapid atmospheric shifts transformed the European archipelago into a single landmass during the Eocene As the story moves through millions of years of evolutionary history Flannery eventually turns to our own species describing the immense impact humans had on the continent's flora and fauna within 30 000 years of our arrival in Europe the woolly rhino the cave bear and the giant elk among others would disappear completely The story continues right up to the present as Flannery describes Europe's leading role in wildlife restoration and then looks ahead to ponder the continent's future with advancements in gene editing technology European scientists are working to recreate some of the continent's lost creatures such as the great ox of Europe's primeval forests and even the woolly mammoth North American Birds H. Nehrling, 1893 **ID Handbook of**

To Have Borne Witness Barry Cogswell,2014-04-16 We are living in a time of massive change Our planets life giving world of nature is suffering unsustainable duress and is headed towards collapse At the same time humankind is forging ahead with ever more potent and destructive industrial practices practices that are causing the over exploitation of both renewable and non renewable resources which in turn are resulting in even more worldwide environmental degradation As the power of industry becomes more efficient as the human population continues to increase and as life sustaining nature suffers ongoing trauma the situation will soon be dire Two over riding questions dominate On a finite planet can we really expect infinite growth and in our rush to grow the global economy are we condemning future generations to lives that will in fact be unsustainable If that is so as this book concludes it will inevitably cause civil conflict a conflict between the industrial extractors of natural resources and those who wish to protect our earth for future generations Until now the conflicts have been mostly law abiding but for how long can more radical reactions be deterred Through reminiscences personal observations and documented examples of wild animal depletions the author explores the ecological damage we have already caused At the end of the book he proposes some solutions that should protect future generations from the outrages of our time But are we capable of making the necessary changes

Greening Europe Anna-Katharina Wöbse,Patrick Kupper,2021-12-20 Today the environment seems omnipresent in European policy within and beyond the European Union The idea of a shared European environment however has come a long way and is still being contested Greening Europe focuses on the many ways people have interacted with nature and made it an issue of European concern The authors ask how notions of Europe mattered in these activities and they expose the many entanglements of activists across the subcontinent who set out to connect and network and to exchange knowledge worldviews and strategies that exceeded their national horizons Moving beyond human agency the handbook also highlights the eminent role nature played in both greening Europe and making Europe a shared environment

Passions for Birds Sean Nixon,2022-05-15 Whether as sources of joy and pleasure to be fed counted and watched as objects of sport to be hunted and killed or as food to be harvested wild birds evoke strong feelings Sean Nixon traces the transformation of these human passions for wild birds from the early twentieth century through the 1970s detailing humans close encounters with wild birds in Britain and the wider North Atlantic world Drawing on a rich range of written sources Passions for Birds reveals how emotional subjective and material attachments to wild birds were forged through a period of

pronounced social and cultural change Nixon demonstrates how for all their differences new traditions in birdwatching and conservation field sports and bird harvesting mobilized remarkably similar feelings towards birds Striking similarities also emerged in the material forms that each of these practices used to bring birds closer to people hides and traps nets and ropes and binoculars Wide ranging in scope Passions for Birds sheds new light on the ways in which wild birds helped shape humans throughout the twentieth century as well as how birds themselves became burdened with multiple cultural meanings and social anxieties over time Europe's Changing Woods and Forests Keith Kirby, Charles Watkins, 2015-06-30 Our understanding of the ecological history of European forests has been transformed in the last twenty years Bringing together key findings from across the continent this book provides a comprehensive account of the relevance of historical studies to current conservation and management of forests It combines theory with a series of regional case studies to show how different aspects of forestry play out according to the landscape and historical context of the local area
